

Rolland R. CONTE · Henri BERLIOCCI
Yves LASNE · Gabriel VERNOT

Theory of high dilutions and experimental aspects

DYNSOL Ltd

Table of contents

Foreword.....	11
Preface.....	13
I Introduction	17
1.1 Definition.....	17
1.2 The foundation of Hahnemann preparations.....	17
1.3 Fields of interest.....	18
1.3.1 Homeopathy.....	18
1.3.2 Use of humic acid.....	19
II Physico-mathematical model	21
2.1 Introduction	21
2.2 The ZFS Theory, the real numbers of Levy	21
2.3 Predictability of brownian motion in the theory of the Levy's reals (water memory)	23
2.4 Interpretative scheme of quantum theory and of high dilution theory within the ZFS theory	24
2.4.1 Electron interference.....	24
2.4.2 High dilutions	24
2.5 Semiotic mechanics.....	25
2.6 Contonian statistics: conton. Links with probabilistic statistics	25
2.7 Girard's Algebra. The remanent wave.....	26
III The link with experiment: the contonian approach	29
3.1 Introduction	29

3.2	Introduction to the remanent wave and contonian statistics	29
3.3	Experimental results.....	33
3.3.1	Heintz's experiment	33
3.3.2	Self similarity properties (on HNO ₃).....	36
3.3.3	Reproduceability of measurements.....	37
3.3.4	Measuring the relaxation time T2 in the diluent (OH ₂).....	42
3.3.5	Effect of the molecular mass: HNO ₃ Na ₂ SO ₄ , & histamine.....	44
3.3.6	Relaxation time T2 for ¹ H and ¹⁷ O at 300 MHz..	46
3.3.7	Transfer of the properties from liquid to granules of lactose.....	49
3.3.8	Pea root growth and humic acid.....	54
3.4	Feedback from the Lagrangian shape to the quality of the experiment.....	56
3.4.1	Introduction	56
3.4.2	Interpretation of the lagrangians from the axioms.	57
3.4.2.1	Typology of Lagrangians in Contonian statistics	57
3.4.2.2	Quasi identity between the diluted diluent and the diluted and succussed diluent.....	58
3.4.2.3	Distinct Lagrangians for the diluted diluent and for the diluted and succussed diluent.....	59
3.4.2.4	Interpretation of three distinct Lagrangians	60
3.4.3	Interpretation of non-linear lagrangians	60
3.4.3.1	Introduction	60
3.4.3.2	Lagrangian having small oscillations	61
3.4.3.3	Lagrangian having large oscillations	62
3.4.3.4	Linear Lagrangian with two slopes.....	62
3.4.4	Conclusions and recommendations for an experimental protocol	63
3.5	Conclusions	64

IV	Impact of environmental (experimental) factors on the remanent wave.....	67
4.1	Introduction	67

4.2	Influence of the quantity of energy introduced by the succussion process.....	67
4.2.1	The hahnemannian process.....	67
4.2.2	Energy introduced by the succussion	68
4.2.3	Experimental verification of the influence of accumulated energy	72
4.2.4	Effect on different succussion processes.....	75
4.2.5	Conclusions.....	78
4.3	Comparison between three main processes: Dilution/Hahnemann/Korsakoff	78
4.3.1	Introduction	78
4.3.2	Experimental method	80
4.3.2.1	Introduction	80
4.3.2.2	Preparation of the samples	81
4.3.3	Analysis and interpretation of the results.....	81
4.3.3.1	Experimental values	81
4.3.3.2	Interpretation of the results.....	84
4.3.3.3	Relationship between the phase displacement related to these two types of preparation	87
4.3.3.4	The approach in Contonian statistics.....	88
4.4	Comparison between two working atmospheres: oxygen and nitrogen	93
4.5	Effect of light (Photons).....	93
4.6	Effect of heat on the relaxation time T2	94
4.7	Effect of ultra sound exposure.....	97
4.8	Effect of magnetic fields.....	98
4.9	Effect of molecular weight of the molecule diluted.....	101
4.9.1	Introduction	101
4.9.2	Processing of the results in contonian statistics.....	101
4.9.3	Findings.....	105
4.10	Effect of gravitation	106
4.10.1	Introduction	106
4.10.2	Growth of Hungarian wheat according to phases of the moon	109
4.10.2.1	Introduction	109
4.10.2.2	Experiments in space and time.....	109
4.10.2.3	Findings	113
4.10.3	Effects of HgCl ₂ on mice mortality according to month.....	115
4.10.4	Theoretical model.....	118

4.10.5 Findings.....	119
4.11 Conclusions	122
V Mechanism of the high dilution effect on organism	123
5.1 Introduction	123
5.2 Fundamental mechanism, vector composition, effect of the dilution level	124
5.3 Effect of high dilutions of thyroxine on amphibians.....	126
5.3.1 Introduction	126
5.3.2 Analysis of the contonian frequency ratios	127
5.3.3 Interpretation of thyroxine effects	128
5.3.3.1 At the late stage (L.S).....	129
5.3.3.2 At the early stage (E.S.).....	129
5.3.4 Interpretation of the findings	131
5.4 Biological aspects	135
5.4.1 Introduction	135
5.4.2 Fundamental mechanism	136
5.4.2.1 The hyperprotons	136
5.4.2.2 Effect of gravitation	140
5.4.3 Biological illustrations.....	140
5.4.3.1 Pathology and gravitation	140
5.4.3.2 Dilution-succussion of serum	142
5.4.3.3 Biological molecules having similar masses.....	145
5.4.3.4 Peroxidase.....	148
5.5 Conclusions	152
VI Epistemological aspects.....	157
6.1 Introduction	157
6.2 The organon by Samuel Hahnemann and the ZFI theory	158
6.3 Memory.....	159
6.4 Logos and cosmos	161
