Contributors xiii

Preface xvii

SECTION ONE

THE PHYSICAL TEMPLATE: HYDROLOGY, HYDRAULICS, AND PHYSICAL STRUCTURE

1 Quantifying Hydrologic Interactions between Streams and Their Subsurface Hyporheic Zones

Judson W. Harvey and Brian J. Wagner

I. Introduction 4

- II. Challenge of Investigating Small-Scale Subsurface Processes That May Have Basin-Scale Consequences 6
- III. Empirical Approaches to Quantifying Hydrologic Exchange between Streams and Shallow Ground Water 7
- IV. Using the Stream-Tracer Approach to Characterize the Hyporheic Zone 17
- V. Paradigm Lost? Limitations of the Stream-Tracer Approach as a Means to Quantify Hyporheic Processes 21
- VI. Charting New Directions in Hyporheic-Zone Research 38
- VII. Conclusion 39
- References 41

2 *Modeling Surface–Subsurface Hydrologic Interactions*

Aaron I. Packman and Kenneth E. Bencala

- I. Introduction 46
- II. Viewing the Interaction from the Stream 47
- III. Viewing the Interaction from the Stream–Bed Interface 51
- IV. Viewing the Interaction from the Subsurface 72
- V. Challenges 77
- References 77

SECTION TWO

BIOGEOCHEMISTRY

SUBSYSTEM INTERACTIONS WITH STREAM SURFACE WATER

3 *Stream Chemistry and Riparian Zones*

Alan R. Hill

- I. Introduction 83
- II. Riparian Zone Hydrological–Chemical Interactions: An Overview 84
- III. Riparian Influences on Stream Chemistry 87
- IV. Riparian Zone Influences on Stream Chemistry

in Relation to Watershed Hydrogeology:
A Conceptual Framework 100

- V. Future Research Directions 106
References 107

4 *Flood Frequency and Stream–Riparian Linkages in Arid Lands*

Eugènia Martí, Stuart G. Fisher, John J. Schade,
and Nancy B. Grimm

- I. Introduction 111
II. Riparian Zones in Arid Catchments 112
III. Hydrological Linkages in Mesic and Arid Catchments 113
IV. Conceptual Model 115
V. Case Study: Sycamore Creek 117
VI. Synthesis 123
VII. Conclusions: Intermediate Disturbance and Nutrient Retention 131
References 133

5 *The Importance of Ground Water to Stream Ecosystem Function*

Robert M. Holmes

- I. Introduction 137
II. Influence of Ground Water on Stream Functioning 139
III. Summary 144
References 145

6 *Surface–Subsurface Exchange and Nutrient Spiraling*

Patrick J. Mulholland and Donald L. DeAngelis

- I. Introduction 149
II. Empirical Studies 151
III. A Stream Nutrient Spiraling Model with Subsurface Transient Storage 154
IV. Results of Model Experiments 158
V. Relevance of Model Experiments 161
VI. Future Research Needs 163
References 164

7 *Emergent Biological Patterns and Surface–Subsurface Interactions at Landscape Scales*

C. M. Pringle and Frank J. Triska

- I. Introduction 167
- II. The Balance of Physical and Chemical Factors on the Geologic Template and Emergent Biological Patterns 169
- III. Hydrothermal Systems as Models 171
- IV. Human Implants on Surface–Subsurface Interactions 175
- V. Synthesis and Recommendations for Future Studies 185
- References 189

SECTION TWO

BIOGEOCHEMISTRY

NUTRIENTS AND METABOLISM

8 *Nitrogen Biogeochemistry and Surface–Subsurface Exchange in Streams*

John H. Duff and Frank J. Triska

- I. Introduction 197
- II. Nitrogen Forms and Transformation Pathways in Fluvial Environments 199
- III. Nitrogen Sources in Fluvial Environments 200
- IV. Hydrologic Residence in Pristine Streams 201
- V. The Redox Environment 203
- VI. Ammonium Sorption to Hyporheic Sediments 204
- VII. Linking Nitrogen Transformation to Hydrologic Exchange in Hyporheic Zone Research 205
- VIII. What These Models Tell Us 214
- IX. Future Directions for Research 216
- References 217

9 *Stream and Groundwater Influences on Phosphorus Biogeochemistry*

Susan P. Hendricks and David S. White

- I. Introduction 221

- II. Sources and Forms of Phosphorus 222
- III. Abiotic Phosphorus Retention by Bed Sediments 223
- IV. Biotic Phosphorus Retention and Release within Bed Sediments 224
- V. Fluvial Dynamics and Physical Retention Mechanisms 225
- VI. Phosphorus and Surface–Subsurface Exchange: A Conceptual Model 226
- VII. Summary and Research Needs 232
- References 233

10 *Surface and Subsurface Dissolved Organic Carbon*

Louis A. Kaplan and J. Denis Newbold

- I. Introduction 237
- II. DOC Concentrations 238
- III. Processes within the Hyporheic Zone 242
- References 253

11 *Anoxia, Anaerobic Metabolism, and Biogeochemistry of the Stream-water–Groundwater Interface*

Michelle A. Baker, Clifford N. Dahm,
and H. Maurice Valett

- I. Introduction 260
- II. Methods Used in Studies of Anaerobic Metabolism 264
- III. Controls on the Establishment of Anoxia 266
- IV. Biogeochemistry and Evidence for Anaerobic Metabolism 269
- V. Influence of Subsurface Anaerobic Metabolism on Stream Ecosystem Processes 276
- VI. Conclusions and Future Research Directions 278
- References 280

SECTION THREE

ORGANISMAL ECOLOGY

12 *Microbial Communities in Hyporheic Sediments*

Stuart Findlay and William V. Sobczak

- I. Introduction 287
- II. Physical and Chemical Environment 288
- III. The Organisms 290
- IV. Respiration 293
- V. Carbon Supply 295
- VI. Alternate Controls on Hyporheic Bacteria 300
- VII. Community Composition 301
- VIII. Conclusions and Research Needs 302
- References 304

13 *The Ecology of Hyporheic Meiofauna*

Christine C. Hakenkamp and Margaret A. Palmer

- I. Introduction 307
- II. Meiofaunal Taxa and Their Relative Abundance in the Hyporheic Zone 309
- III. Spatial Distribution and Abundance 316
- IV. Meiofauna and the Physical Environment 319
- V. Tolerance to Anoxia, Body Size, and Biomass 321
- VI. Trophic Roles, Dispersal Dynamics, and Response to Spatial-Temporal Heterogeneity 322
- VII. Meiofaunal-Microbial Interactions 324
- VIII. Meiofauna and Ecosystem Ecology 325
- IX. Conclusions and Future Research Needs 328
- References 329

14 *The Subsurface Macrofauna*

Andrew Boulton

- I. Introduction 337

- II. Functional Classification of Subsurface Macrofauna 338
- III. Factors Influencing the Distribution of Subsurface Macrofauna 345
- IV. The Functional Role of Subsurface Macrofauna 349
- V. Potential Role as Biomonitors of Deteriorating Groundwater Quality 354
- VI. Conclusions 355
- References 356

15 *Lotic Macrophytes and Surface-Subsurface Exchange Processes*

David S. White and Susan P. Hendricks

- I. Introduction 363
- II. Macrophytes and Aquatic Habitats 366
- III. Macrophytes as Indicators of Surface and Subsurface Conditions 367
- IV. Macrophytes and Surface- and Subsurface Water Flow Patterns 369
- V. Nutrient Uptake from Sediments 371
- VI. Processes at the Rhizosphere 373
- VII. Summary and Avenues for Further Study 375
- References 376

16 *Subsurface Influences on Surface Biology*

C. Lisa Dent, John J. Schade, Nancy B. Grimm,
and Stuart G. Fisher

- I. Introduction 381
- II. Effects on Primary Producers 382
- III. Effects on Microorganisms and Microbial Processes 386
- IV. Effects on Invertebrates 388
- V. Effects on Fish 389
- VI. Heterogeneity and Scale 391
- VII. Human Impacts 394
- VIII. Summary 396
- References 397

SECTION FOUR

SUMMARY AND SYNTHESIS

17 *Surface-Subsurface Interactions: Past, Present, and Future*

Emily H. Stanley and Jeremy B. Jones

- I. Introduction 405
- II. Growth and Development Trajectories 406
- III. Flowpaths and Interfaces 408
- IV. The Spatial Context 409
- V. Synthetic Models and Future Directions 412
- References 414
