Engineering**

VOLUME FOUR

**River and
Canal
Hydraulics**

SERGE LELIAVSKY

CHAPMAN & HALL

CONTENTS

1. Uniform Flow

1. Evolution of the General Principles of Uniform Flow in Open Channels	page 1
2. The "Scala" Fallacy. Empirical Results before Bazin	2
3. Empirical "Scala" Curves of Bazin, and after Bazin	5
4. Theoretical Approach to the "Scala" Problem	8
5. Modern Concept of the "Scala"	10
6. Turbulent Friction. Mixing Length	13
7. The "Friction Fallacy" and the Hydraulic Effect of the Physical Characteristics of the Channel. Earlier Period	24
8. Post-Chézy Period	27
9. D'Arcy-Bazin's Formula and other Equations of the Same Group	28
10. Austrian Group	42
11. Effect of Silt on the Velocity of Water	43
12. Use and Significance of "Hydraulic Radius" Questioned	49
13. Hydraulic Friction in the Light of Modern Views on Turbulence	53
14. Further Investigations in Connection with Various Types of Roughness	57
15. Bakhmeteff's and Feodoroff's Diagram for Comparing Old and New Discharge Coefficients	68
16. Ripples and Dunes. General Description	70
17. Attempts to Explain the Sand Waves Mechanically	79
18. Discharge Formula taking into Account Effect of Sand Waves in Alluvial Channel	83
19. Experiments with Artificial Roughness	87
20. Self-Aerated Flow in Open Channels	101

2. Non-Uniform Flow in General

1. Introductory	121
2. General Notes	121
3. Differential Equation for a Stream Line	124
4. Differential Equation for a Cross Section	127
5. Transformation of the General Differential Equation	132

3. Backwater-Curve Analysis

- | | |
|--|-----|
| 1. Integration of the Main Differential Equation in the Case of a wide
Rectangular Channel. Backwater Formula of Bresse | 138 |
| 2. Six Types of Surface Curves, and the Standing Wave | 144 |
| 3. Examples of Backwater-curve Calculations | 150 |
| 4. Gunder's Amendment | 172 |
| 5. Simplified Method of Dupuit-Rühlmann | 176 |
| 6. Parabolic Cross-section. Tolkmitt's Method | 191 |
| 7. Backwater Curves of the Austrian Group | 198 |
| 8. Method of M. Baticle | 201 |
| 9. Backwater Formulæ of Supuit and Masoni, and Bakhmeteff | 205 |
| 10. Method of Professor Mononobe | 214 |
| 11. The Rôle of Backwater-curve Calculation in Design | 220 |
