

FUNDAMENTALS OF ENVIRONMENTAL ENGINEERING

James R. Mihelcic

Contents

Chapter 1

Student Preface: Why Do I Need Fundamentals?	1
---	----------

Chapter 2

Units of Concentration	11
-------------------------------	-----------

2.1 Mass Concentration Units	11
2.1.1 Mass/Mass Units	12
2.1.2 Mass/Volume Units: mg/L and $\mu\text{g}/\text{m}^3$	13
2.2 Volume/Volume and Mole/Mole Units	14
2.2.1 Using the Ideal Gas Law to Convert ppm _v to $\mu\text{g}/\text{m}^3$	15
2.3 Partial-pressure Units	18
2.4 Mole/Volume Units	21
2.5 Other Types of Units	22
2.5.1 Normality	22
2.5.2 Concentration as a Common Constituent	25
2.5.3 Reporting Particle Concentrations in Air and Water	28
2.5.4 Representation by Effect	31
2.6 Common Concentrations Encountered in Wastestreams, Surface and Groundwaters, and the Atmosphere	32
Chapter Problems	36
References	41

Chapter 3

Chemistry	43
------------------	-----------

3.1 The Difference Between Activity and Concentration	43
3.1.1 Ionic Strength	45
3.1.2 Calculating Activity Coefficients for Electrolytes	45
3.1.3 Calculating Activity Coefficients for Nonelectrolytes	47
3.2 Chemical Kinetics	49
3.2.1 The Rate Law	49
3.2.2 Zero- and First-order Reactions	52
3.2.3 Pseudo-first-order Reactions	55
3.2.4 Half-Life and Its Relationship to the Rate Constant	56

3.2.5	Effect of Temperature on Rate Constants	58
3.2.6	Catalysts	61
3.3	Chemical Thermodynamics and Equilibrium	63
3.3.1	Calculation of Change in Free Energy at Standard Conditions	65
3.3.2	Calculating Changes in Free Energy under Nonstandard "Ambient" Conditions	68
3.3.3	Free Energy and Its Relationship to the Equilibrium Constant	72
3.3.4	Effect of Temperature on the Equilibrium Constant	75
3.4	Equilibrium Processes	75
3.4.1	Volatilization	76
3.4.2	Air–Water Equilibrium	80
3.4.2.1	Henry's Constant with Units for a Gas Dissolving in a Liquid	82
3.4.2.2	Dimensionless Henry's Constant for a Species Transferring from a Liquid to a Gas	84
3.4.3	Acid–Base Chemistry	86
3.4.3.1	pH	86
3.4.3.2	Definition of Acids and Bases and Their Equilibrium Constants	87
3.4.3.3	The Carbonate System, Alkalinity, and Buffering Capacity	92
3.4.4	Precipitation–Dissolution	97
3.4.5	Sorption and Ion Exchange to Solid Surfaces	102
3.4.5.1	Introduction	102
3.4.5.2	Sorption and Adsorption	103
3.4.5.3	Ion Exchange	119
3.5	Oxidation/Reduction	120
3.6	Photochemistry and the Atmosphere (Urban Smog and the Ozone Hole)	122
3.6.1	Introduction	122
3.6.2	Stratospheric Ozone Chemistry	125
3.6.3	Tropospheric Ozone Chemistry	128
	Chapter Problems	129
	References	136

Chapter 4

Physical Processes

4.1 Mass Balances 139

4.1.1 The Control Volume 141

4.1.2	Terms of the Mass-Balance Equation for a CMFR	141
4.1.2.1	Mass Accumulation Rate, dm/dt	141
4.1.2.2	Mass Flux in, \dot{m}_{in}	145
4.1.2.3	Mass Flux out, \dot{m}_{out}	145
4.1.2.4	Net Rate of Chemical Reaction, $\dot{m}_{reaction}$	146
4.1.2.5	Steps in Mass-Balance Problems	147
4.1.3	Reactor Analysis: The CMFR	147
4.1.4	The Batch Reactor	155
4.1.5	The Plug-Flow Reactor	155
4.1.5.1	Comparison of the PFR to the CMFR	158
4.1.5.1.1	Response to Inlet Spikes	160
4.1.5.1.2	Selection of CMFR or PFR	161
4.1.6	Retention Time and Other Expressions for V/Q	162
4.2	Energy Balances	165
4.2.1	Forms of Energy	165
4.2.2	Conducting an Energy Balance	167
4.3	Mass-Transport Processes	174
4.3.1	Advection and Dispersion	174
4.3.1.1	Definition of the Mass-Flux Density	175
4.3.1.2	Calculation of the Advective Flux	175
4.3.1.3	Dispersion	176
4.3.1.3.1	Fick's Law	176
4.3.1.3.2	Molecular Diffusion	179
4.3.1.3.3	Turbulent Dispersion	181
4.3.1.3.4	Mechanical Dispersion	182
4.3.2	The Movement of a Particle in a Fluid: Stokes' Law	183
4.3.2.1	Gravitational Settling	184
4.3.2.2	Calculation of the Minimum Particle Size Removed	187
4.3.2.2.1	Distance Settled during Retention Period	188
4.3.2.2.2	Settling Velocity Greater than the Overflow Rate	189
4.3.2.2.3	Equivalence of the Two Methods	189
4.3.2.3	Other Applications of Force Balances on a Particle	192
4.3.3	Flow of Water Through a Porous Medium: Darcy's Law for Groundwater Flow	192
4.3.3.1	Head and Hydraulic Gradient	194
4.3.3.2	Porosity	194
4.3.3.3	Darcy's Law	194
4.3.3.4	The Darcy Velocity Versus the True Horizontal Velocity	196
	Chapter Problems	198
	References	207

Chapter 5**Biology**

209

- 5.1 Ecosystem Structure and Function 210
 - 5.1.1 Major Organism Groups 212
- 5.2 Population Dynamics 217
 - 5.2.1 Units of Expression for Population Size 217
 - 5.2.2 Models of Population Growth 218
 - 5.2.2.1 Exponential or Unlimited Growth 219
 - 5.2.2.2 Logistic Growth: The Effect of Carrying Capacity 221
 - 5.2.2.3 Resource Limited Growth: The Monod Model 224
 - 5.2.2.4 The Yield Coefficient: Relating the Rate of Growth to the Rate of Substrate Utilization 227
 - 5.2.2.5 Respiration: The Decay Coefficient 229
 - 5.2.2.6 Biokinetic Coefficients 229
 - 5.2.2.7 Batch Growth: Putting It All Together 230
 - 5.2.2.8 Growth Models and Human Population 233
- 5.3 Energy Flow in Ecosystems 237
 - 5.3.1 Energy Capture and Use: Photosynthesis and Respiration 237
 - 5.3.2 Trophic Structure in Ecosystems 242
 - 5.3.3 Thermodynamics and Energy Transfer 246
- 5.4 Biochemical Oxygen Demand (BOD), Theoretical Oxygen Demand (THOD), and Chemical Oxygen Demand (COD) 248
 - 5.4.1 Definition of BOD, CBOD, and NBOD 248
 - 5.4.2 Sources of BOD 249
 - 5.4.3 Theoretical Oxygen Demand 251
 - 5.4.4 BOD Kinetics 256
 - 5.4.5 The CBOD Rate Constant 258
 - 5.4.6 Measurement of BOD 260
 - 5.4.7 The BOD Test: Limitations and Alternatives Such as Chemical Oxygen Demand 264
- 5.5 Dissolved Oxygen and BOD in Rivers 265
 - 5.5.1 Oxygen Saturation 269
 - 5.5.2 The Oxygen Deficit 270
 - 5.5.3 The Oxygen Mass Balance 270
 - 5.5.4 The Dissolved-oxygen Sag Curve and the Critical Distance 272
- 5.6 Material Flow in Ecosystems 273
 - 5.6.1 Hydrologic Cycle 277
 - 5.6.2 Carbon Cycle 281
 - 5.6.3 Oxygen Cycle 283
 - 5.6.4 Nitrogen Cycle 283
 - 5.6.5 Phosphorus Cycle 287
 - 5.6.6 Sulfur Cycle 288

5.7	Lakes: Nutrients and Eutrophication	291
5.7.1	Thermal Stratification of Lakes and Reservoirs	291
5.7.2	Organic Matter, Thermal Stratification, and Oxygen Depletion	293
5.7.3	Nutrient Limitations and Trophic State	295
5.7.4	Modeling and Managing Eutrophication	296
5.7.5	Lake and Reservoir Restoration and Management	299
5.8	Ecosystem Health and Public Welfare	300
5.8.1	Bioconcentration and Bioaccumulation	300
5.8.2	Toxicity	304
5.8.3	Indicator Organisms	308
	Chapter Problems	310
	References	320

Solutions to Chapter Problems	323
