

Introduction to the Theory of Nonlinear Optimization

JOHANNES
JAHN

Second Revised Edition

Springer

Contents

Preface	v
1 Introduction and Problem Formulation	1
2 Existence Theorems for Minimal Points	7
2.1 Problem Formulation	7
2.2 Existence Theorems	8
2.3 Set of Minimal Points	18
2.4 Application to Approximation Problems	19
2.5 Application to Optimal Control Problems	24
Exercises	30
3 Generalized Derivatives	33
3.1 Directional Derivative	33
3.2 Gâteaux and Fréchet Derivatives	39
3.3 Subdifferential	51
3.4 Quasidifferential	59
3.5 Clarke Derivative	69
Exercises	77
4 Tangent Cones	81
4.1 Definition and Properties	81
4.2 Optimality Conditions	91
4.3 A Lyusternik Theorem	98
Exercises	106
5 Generalized Lagrange Multiplier Rule	109
5.1 Problem Formulation	109

5.2	Necessary Optimality Conditions	112
5.3	Sufficient Optimality Conditions	130
5.4	Application to Optimal Control Problems	140
	Exercises	159
6	Duality	163
6.1	Problem Formulation	163
6.2	Duality Theorems	168
6.3	Saddle Point Theorems	172
6.4	Linear Problems	176
6.5	Application to Approximation Problems	179
	Exercises	188
7	Direct Treatment of Special Optimization Problems	191
7.1	Linear Quadratic Optimal Control Problems	191
7.2	Time Minimal Control Problems	199
	Exercises	216
A	Weak Convergence	219
B	Reflexivity of Banach Spaces	221
C	Hahn-Banach Theorem	223
D	Partially Ordered Linear Spaces	227
	Bibliography	231
	Answers to the Exercises	247
	Index	255
