## PART I Direct Microscopic Examination of Clinical Specimens

---

### Introduction 11

### Histological Terminology 13

### Tissue Reactions to Fungal Infection 17

### Stains 21

<b>TABLE 1</b> Stains for direct microscopic examination of fungi and filamentous bacteria in tissue	22
--	----

### Guide to Interpretation of Direct Microscopic Examination 23

### Detailed Descriptions 29

Actinomycosis 31

Mycetoma (Actinomycotic or  
Eumycotic) 32

Nocardiosis 34

Zygomycosis (Mucormycosis) 35

Aspergillosis 36

Miscellaneous Hyalohyphomycoses 38

Dermatophytosis 40

Tinea versicolor 41

Tinea nigra 42

Phaeohyphomycosis 43

Chromoblastomycosis 44

Sporotrichosis 45

Histoplasmosis capsulati 46

Penicilliosis marneffeii 48

Blastomycosis 50

Paracoccidioidomycosis 51

Candidiasis (Candidosis) 52

Cryptococcosis 54

Pneumocystosis 56

Protothecosis 57  
Coccidioidomycosis 58  
Rhinosporidiosis 59

Adiaspiromycosis 61  
**Special References 63**

## **PART II Identification of Fungi in Culture**

**Guide to Identification of Fungi in  
Culture 67**

**Detailed Descriptions 97**

**Filamentous Bacteria 99**

Introduction 101

**TABLE 2** Differentiation of aerobic  
actinomycetes 103

*Nocardia* spp. 104

*Streptomyces* spp. 106

*Actinomadura* spp. 107

*Nocardiosis dassonvillei* 108

**Yeasts and Yeastlike Organisms 109**

Introduction 111

*Candida albicans* 113

**TABLE 3** Characteristics of the genera  
of clinically encountered yeasts and  
yeastlike organisms 114

*Candida dubliniensis* 115

**TABLE 4** Characteristics of *Candida*  
spp. most commonly encountered  
in the clinical laboratory 116

**TABLE 5** Characteristics that assist in  
differentiating *Candida dubliniensis*  
from *Candida albicans* 118

*Candida tropicalis* 119

*Candida parapsilosis* 120

*Candida lusitaniae* 121

*Candida krusei* 122

**TABLE 6** Differentiating characteristics  
of *Blastoschizomyces capitatus* vs  
*Candida krusei* 123

**TABLE 7** Differentiating characteristics  
of *Candida krusei* vs *Candida*  
*inconspicua* 123

*Candida kefyr* 124

*Candida guilliermondii* 125

*Candida lipolytica* 126

*Candida zeylanoides* 127

*Candida glabrata* 128

*Cryptococcus neoformans* 129

**TABLE 8** Characteristics of  
*Cryptococcus* spp. 130

**TABLE 9** Characteristics of yeasts  
and yeastlike organisms other  
than *Candida* spp. and  
*Cryptococcus* spp. 131

*Rhodotorula* spp. 132

*Sporobolomyces salmonicolor* 133

*Saccharomyces cerevisiae* 134

*Pichia anomala* 135

*Malassezia furfur* 136

*Malassezia pachydermatis* 137

*Ustilago* sp. 138

*Prototheca* spp. 139

*Trichosporon* spp. 140

**TABLE 10** Key characteristics of  
clinically encountered  
*Trichosporon* spp. 141

*Blastoschizomyces capitatus* 142

*Geotrichum candidum* 143

**Thermally Dimorphic Fungi 145**

Introduction 147

*Sporothrix schenckii* 148

*Histoplasma capsulatum* 150

*Blastomyces dermatitidis* 152

*Paracoccidioides brasiliensis* 154

*Penicillium marneffeii* 156

## Thermally Monomorphic Moulds 159

### Zygomycetes 161

Introduction 163

**TABLE 11** Differential characteristics of similar organisms in the class Zygomycetes 165

**TABLE 12** Differential characteristics of the clinically encountered *Rhizopus* spp. 165

*Rhizopus* spp. 166

*Mucor* spp. 167

*Rhizomucor* spp. 168

*Absidia corymbifera* 169

*Apophysomyces elegans* 170

*Saksenaia vasiformis* 172

*Cokeromyces recurvatus* 173

*Cunninghamella bertholletiae* 174

*Syncephalastrum racemosum* 175

*Basidiobolus* sp. 176

*Conidiobolus coronatus* 177

### Dematiaceous Fungi 179

Introduction 181

*Fonsecaea pedrosoi* 183

*Fonsecaea compacta* 185

**TABLE 13** Characteristics of *Phialophora*, *Phaeoacremonium*, *Acremonium*, *Phialemonium*, and *Lecytophora* 186

*Phialophora verrucosa* 187

*Phialophora richardsiae* 188

*Phaeoacremonium parasiticum* 189

*Phialemonium* spp. 190

*Cladosporium* spp. 192

**TABLE 14** Characteristics of *Cladosporium* and *Cladophialophora* spp. 193

*Cladophialophora carrionii* 194

*Cladophialophora bantiana* 195

*Pseudallescheria boydii* ;

*Scedosporium apiospermum* 196

*Scedosporium prolificans* 198

*Dactylaria constricta* 199

**TABLE 15** Differentiation of the varieties of *Dactylaria constricta* 200

**TABLE 16** Characteristics of some of the "black yeasts" 200

*Exophiala jeanselmei* 201

*Wangiella dermatitidis* (*Exophiala dermatitidis*) 202

*Phaeoannellomyces werneckii* (*Hortaea werneckii*, *Exophiala werneckii*) 203

*Madurella mycetomatis* 204

*Madurella grisea* 205

*Piedraia hortae* 206

*Aureobasidium pullulans* 207

**TABLE 17** Differential characteristics of *Aureobasidium pullulans* vs *Hormonema dematioides* 209

*Hormonema dematioides* 210

*Scytalidium* spp. 211

*Botrytis* sp. 213

*Stachybotrys chartarum* (*S. alternans*, *S. atra*) 214

*Graphium* sp. 215

*Curvularia* spp. 216

*Bipolaris* spp. 217

**TABLE 18** Characteristics of *Bipolaris*, *Drechslera*, and *Exserohilum* spp. 218

*Exserohilum* spp. 219

*Helminthosporium* sp. 220

*Alternaria* sp. 221

*Ulocladium* sp. 222

*Stemphylium* sp. 223

*Pithomyces* sp. 224

*Epicoccum* sp. 225

*Nigrospora* sp. 226

*Chaetomium* sp. 227

*Phoma* spp. 228

### Dermatophytes 229

Introduction 231

*Microsporum audouinii* 232

*Microsporum canis* var. *canis* 233

<i>Microsporium canis</i> var. <i>distortum</i>	234
<i>Microsporium cookei</i>	235
<i>Microsporium gypseum</i> complex	236
<i>Microsporium gallinae</i>	237
<i>Microsporium nanum</i>	238
<i>Microsporium vanbreuseghemii</i>	239
<i>Microsporium ferrugineum</i>	240
<i>Trichophyton mentagrophytes</i>	241
<b>TABLE 19</b> Differentiation of similar conidia-producing <i>Trichophyton</i> spp.	242
<i>Trichophyton rubrum</i>	243
<i>Trichophyton tonsurans</i>	244
<i>Trichophyton terrestre</i>	245
<i>Trichophyton megninii</i>	246
<i>Trichophyton soudanense</i>	247
<b>TABLE 20</b> Growth patterns of <i>Trichophyton</i> species on nutritional test media	248
<i>Trichophyton schoenleinii</i>	249
<i>Trichophyton verrucosum</i>	250
<i>Trichophyton violaceum</i>	251
<i>Trichophyton ajelloi</i>	252
<i>Epidermophyton floccosum</i>	253
<b>Hyaline Hyphomycetes</b>	255
Introduction	257
<i>Coccidioides immitis</i>	258
<b>TABLE 21</b> Differential characteristics of fungi in which arthroconidia predominate	260
<i>Malbranchea</i> spp.	261

<i>Geomyces pannorum</i>	262
<i>Arthrographis kalrae</i>	263
<i>Emmonsia</i> spp.	264
<b>TABLE 22</b> Identification of the most common species of <i>Aspergillus</i>	266
<i>Aspergillus</i> spp.	268
<i>Penicillium</i> spp.	269
<i>Paecilomyces</i> spp.	270
<i>Scopulariopsis</i> spp.	272
<b>TABLE 23</b> Differential characteristics of <i>Paecilomyces variotii</i> vs <i>P. lilacinus</i>	274
<b>TABLE 24</b> Differential characteristics of <i>Scopulariopsis brevicaulis</i> vs <i>S. brumptii</i>	274
<i>Gliocladium</i> sp.	275
<i>Trichoderma</i> sp.	276
<i>Beauveria bassiana</i>	277
<i>Verticillium</i> sp.	278
<i>Acremonium</i> spp.	279
<i>Fusarium</i> spp.	280
<i>Lecythophora</i> spp.	282
<i>Trichothecium roseum</i>	283
<i>Chrysosporium</i> spp.	284
<b>TABLE 25</b> Differential characteristics of <i>Chrysosporium</i> vs <i>Sporotrichum</i>	286
<i>Sporotrichum</i> sp.	287
<i>Sepedonium</i> sp.	288
<i>Monilia sitophila</i>	289

## PART III Laboratory Technique

### Laboratory Procedures 293

Collection and Preparation of Specimens 295

Methods for Direct Microscopic Examination of Specimens 298

Primary Isolation 300

**TABLE 26** Media for primary isolation of fungi 301

Macroscopic Examination of Cultures 303

Microscopic Examination of Growth 303

Procedure for Identification of Yeasts 305

Isolation of Yeast When Mixed with Bacteria 307

Germ Tube Test for the Presumptive Identification of *Candida albicans* 307

Rapid Enzyme Tests for the Presumptive Identification of <i>Candida albicans</i>	308	Assimilation Media (for Yeasts)	328
Caffeic Acid Disk Test	308	Birdseed Agar (Niger Seed Agar; Staib Agar)	332
Olive Oil Disks for Culturing <i>Malassezia furfur</i>	309	Brain Heart Infusion (BHI) Agar	333
Conversion of Thermally Dimorphic Fungi in Culture	309	Candida ID Agar	333
Method of Inducing Sporulation of <i>Apophysomyces elegans</i> and <i>Saksenaea vasiformis</i>	310	Casein Agar	334
In Vitro Hair Perforation Test	310	CHROMagar Candida Medium	334
Germ Tube Test for Differentiation of Some Dematiaceous Fungi	311	Cornmeal Agar	335
Maintenance of Stock Fungal Cultures	311	Dermatophyte Test Medium (DTM)	336
Controlling Mites	312	Fermentation Broth for Yeasts	336
<b>Staining Methods</b>	<b>313</b>	Gelatin Medium	337
Acid-Fast Modified Kinyoun Stain for <i>Nocardia</i> spp.	315	Inhibitory Mold Agar (IMA)	339
Acid-Fast Stain for Ascospores	316	Loeffler Medium	339
Ascospore Stain	316	Lysozyme Medium	340
Calcofluor White Stain	316	Mycosel Agar	340
Giemsa Stain	317	Potato Dextrose Agar (PDA) and Potato Flake Agar (PFA)	341
Gomori Methenamine Silver (GMS) Stain	318	Rapid Assimilation of Trehalose (RAT) Broth	341
Gram Stain (Hucker Modification)	320	Rapid Sporulation Medium (RSM)	343
Lactophenol Cotton Blue	321	SABHI Agar	343
Lactophenol Cotton Blue with PVA (Huber's Mounting Medium, Modified)	322	Sabouraud Dextrose Agar (SDA)	344
Rehydration of Paraffin-Embedded Tissue	323	Sabouraud Dextrose Agar with 15% NaCl	345
<b>Media</b>	<b>325</b>	Sabouraud Dextrose Broth	345
Ascospore Media	327	Starch Hydrolysis Agar	345
		<i>Trichophyton</i> Agars	346
		Tyrosine or Xanthine Agar	347
		Urea Agar	348
		Water Agar	348
		Yeast Extract-Phosphate Agar with Ammonia	348
