

Telecommunications Technology and Applications Series 5

The **ISDN** Subscriber Loop

NICK BURD

CHAPMAN & HALL

Contents

Preface	xi
Acknowledgments	xv
1 ISDN – the dawning of a new era in telecommunications	1
1.1 Public networks	2
1.2 Applications and services	4
1.3 The integrated services digital network (ISDN)	10
1.4 Summary	22
2 ISDN standards and architecture	23
2.1 ISDN and the CCITT/ITU-T	23
2.2 The early days of ISDN	24
2.3 ISDN standardization in Europe	25
2.4 ISDN standardization in North America	28
2.5 Narrowband and broadband ISDN	29
2.6 The ITU-T I-Series Recommendations	31
2.7 The ISDN subscriber loop reference model	32
2.8 Reference configurations and reference points	33
2.9 Channels and interface structures	38
2.10 ISDN services	42
2.11 ISDN protocol stacks	45
3 The S/T interface – the ISDN basic rate access physical layer user–network interface	49
3.1 Framing	51
3.2 Point-to-multipoint D-channel access	53
3.3 Multiframeing	55
3.4 Wiring configurations	57
3.5 Activation and deactivation	62
3.7 Layer 1 states and primitives	68
3.8 Loopbacks and maintenance	76
3.9 S/T interface transceivers	77
4 The U interface and the basic rate access digital transmission system	91
4.1 Subscriber loop cables	92
4.2 Digital subscriber loop technology	95
4.3 U transmission systems	110
4.4 Repeaters	122
4.5 U interface standards	122
4.6 U interface transceivers	128
4.7 The NT1	133

4.8 Pairgain systems	135
5 Protocols for ISDN call control signalling	139
5.1 The LAPD data-link layer	139
5.2 LAPD frame structure	141
5.3 LAPD procedures	148
5.4 The network layer for basic call control	158
5.5 Q.931 message structure	159
5.6 Other information elements	161
5.7 Protocol control	166
5.8 Call control application	175
5.9 Supplementary services	175
5.10 Q.931 support for supplementary services	176
5.11 Control of supplementary services	181
5.12 System management	187
6 The ISDN terminal	191
6.1 The S interface transceiver	193
6.2 The HDLC controller	194
6.3 The microprocessor system	201
6.4 Hardware and software partitioning	206
6.5 Power supply	208
6.6 The terminal codec/filter	209
6.7 Peripheral serial control port	215
6.8 The TDM interconnect bus	217
6.9 The general circuit interface (GCI)	220
6.10 Implementation of call control software	230
6.11 Application programming interfaces	244
7 Voice and video communications in the ISDN	247
7.1 Speech and audio communications	248
7.2 Video communications	257
7.3 Conferencing	283
8 Data communication in the ISDN	289
8.1 Terminal adapters	290
8.2 V.110	291
8.3 V.120	300
8.4 TA devices	308
8.5 Connecting packet mode terminals to the ISDN	310
8.6 Telematic services	313
8.7 The PC terminal adapter	315
8.8 PC communications in the ISDN: accessing the internet	318
8.9 LAN-to-LAN communications	319
8.10 Providing more connection bandwidth	326

8.11	Frame relay	332
8.12	Data conferencing	335
9	The private branch exchange (PBX) and primary rate access (PRA) ISDN	341
9.1	An introduction to the PBX	341
9.2	PBX architecture and operation	343
9.3	Proprietary digital subscriber loops	347
9.4	Time compression multiplexing	348
9.5	PRA ISDN	354
9.6	Inter-PBX signalling	361
10	Subscriber loop technologies beyond the ISDN	367
10.1	The migration from copper to optical fibre subscriber loops	367
10.2	Extending the life of copper subscriber loops	369
10.3	The high-bit-rate digital subscriber loop (HDSL)	370
10.4	The asymmetric digital subscriber loop (ADSL)	378
10.5	Hybrid fibre-coax access networks	384
10.6	Optical fibre in the subscriber loop	388
10.7	The synchronous digital hierarchy (SDH)	391
10.8	Broadband ISDN and ATM	402
10.9	Customer premises subscriber loops	412
Appendix A	The seven-layer reference model for open systems interconnection	417
A.1	Introduction	417
A.2	The seven-layer reference model	418
A.3	Layering principles	422
A.4	Summary	425
Appendix B	List of ITU-T I-Series Recommendations	427
Appendix C	Differences in ISDN services and signalling implementations	435
C.1	Services	435
C.2	Physical layer differences	440
C.3	Differences in data-link layer (LAPD) standards	441
C.4	Differences in network layer (call control) standards	442
C.5	Regional differences within Europe	443
