

# Analysis of Rolling Element Bearings

Wan Changsen

Translated by Wan Changsen and Zhang Zhaoying

## Contents

Preface	viii
Notation	x
<b>Chapter One. Types of rolling bearings</b>	1
Ball bearings	3
Roller bearings	15
<b>Chapter Two. Geometric relation in rolling bearings</b>	23
Ball bearings	23
Roller bearings	40
<b>Chapter Three. Contact pressure and deformation</b>	50
Hertzian theory of the elastic contact	51
Contact pressure and deformation in rolling bearings	59
Stress distribution below contact surface	73
Influential factors on contact stress	78
<b>Chapter Four. Load distribution in rolling bearings</b>	82
Load-deflection relation	82
Load distribution in radial bearings	84
Bearings under axial load	89
Bearings under combined radial and axial loads	98
Bearings under combined radial, axial and moment loads	105
<b>Chapter Five. Kinematics of rolling bearings</b>	110
Simple kinematic relations	110
General kinematic relations in ball bearings	115
<b>Chapter Six. Elastohydrodynamic lubrication in rolling bearings</b>	127
The theory of elastohydrodynamic lubrication	128
Calculation of film thickness in roller bearings	148
Calculation of film thickness in ball bearings	152
Estimation of film thickness in rolling bearings	154
<b>Chapter Seven. Contact fatigue</b>	160
The maximum dynamic shear stress theory of contact fatigue	161
Engineering model of contact fatigue failure	170
Statistical fracture theory of contact fatigue	177
Influential factors on contact fatigue	183
<b>Chapter Eight. Dynamic load rating and equivalent dynamic load</b>	189

Dynamic load rating	191
Equivalent dynamic load	203
Modification of life calculation	214
<b>Chapter Nine. Statistical treatments of life experiments</b>	219
Parameter estimations of Weibull distribution	219
Treatment methods of accelerated tests	227
<b>Chapter Ten. Static load rating of rolling bearings</b>	245
Permanent deformation in rolling bearings	245
Static load rating of rolling bearings	247
Equivalent static load of rolling bearings	253
<b>Chapter Eleven. Life calculation of rolling bearings and their development</b>	257
Life calculation of rolling bearings	257
Development of life calculation methods	264
Life calculation of linear motion ball bearings	273
Life calculation of rolling screws	279
Calculation of wear life of bearings	280
<b>Chapter Twelve. Grease life in rolling bearings</b>	287
Calculating method for grease life	287
Influential factors on grease life	294
<b>Chapter Thirteen. Operating performance of rolling bearings—stiffness</b>	296
Deflection and stiffness of rolling bearings	297
Preloading for rolling bearings	301
Limiting axial load of ball bearings	307
<b>Chapter Fourteen. Operating performance of rolling bearings—friction moment</b>	310
Formation mechanisms of friction moments in rolling bearings	311
Calculation of friction moment in rolling bearings	317
<b>Chapter Fifteen. Optimization of design for rolling bearings</b>	322
Basic concepts of mathematical optimization of design	323
Objective functions of design optimization for rolling bearings	329
Applications of optimization methods in bearing design	334
<b>Chapter Sixteen. Computer aided design of high speed ball bearings</b>	343
Raceway control theory	344
Design theory of elasto-hydrodynamic lubrication	356

Applications of computing models	367
<b>Chapter Seventeen. Computer aided design of high speed roller bearings</b>	376
Design theory of elasto-hydrodynamic lubrication	377
Influence of misalignment on cylindrical roller bearings	388
References	397
Index	405
