

The book cover features a solid blue background. A large, semi-transparent red rectangle is positioned in the upper half of the cover, partially overlapping the title text. The title is written in a white, sans-serif font, with the words 'Electronic noise and fluctuations in solids' arranged in five lines. The author's name, 'Sh Kogan', is printed in white below the title.

Electronic
noise
and
fluctuations
in solids

Sh Kogan

Contents

<i>Preface</i>	page	xiii
<i>Abbreviations</i>		xviii
1 Introduction: Some basic concepts of the theory of random processes		1
1.1 Probability density functions; moments		1
1.2 The correlation function		6
1.3 Spectral density of noise		12
1.4 Ergodicity and nonergodicity of random processes		17
1.5 Random pulses and shot noise		21
1.6 Markov processes; general theory		24
1.7 Discrete Markov processes; random telegraph noise		31
1.8 Quasi-continuous (diffusion-like) Markov processes		33
1.9 Brownian motion		37
1.10 Langevin approach to the kinetics of fluctuations		41
2 Fluctuation–dissipation relations		48
2.1 Derivation of fluctuation–dissipation relations		49
2.2 Equilibrium noise in quasi-stationary circuits		57
2.3 Fluctuations of electromagnetic fields		62
3 Fluctuations in nonequilibrium gases		67
3.1 Some basic concepts of hot-electrons' physics		68
3.2 Simple model of hot-electrons' noise		75
3.3 General method: the Boltzmann–Langevin equation		80
3.4 Current fluctuations and noise temperature		86
3.5 Current fluctuations and diffusion		93
3.6 One-time correlation in nonequilibrium gases		97
3.7 Intervalley noise in multivalley semiconductors		100
3.8 Noise in the streaming regime		104
3.9 Noise in a semiconductor with a current filament		109

4	Generation–recombination noise	118
	4.1 G–R noise in monopolar semiconductors	119
	4.2 Noise produced by recombination and diffusion	123
5	Noise in quantum ballistic systems	130
	5.1 Introduction	130
	5.2 Equilibrium noise and shot noise	143
	5.3 Modulation noise in quantum point contacts	151
	5.4 Transition to a macroscopic conductor	155
	5.5 Noise in tunnel junctions	160
6	Resistance noise in metals	167
	6.1 Incoherent scattering of electrons by mobile defects	168
	6.2 Effect of mobile scattering centers on electron interference	172
	6.3 Fluctuations of the number of scattering centers	182
	6.4 Temperature fluctuations and the corresponding noise	186
7	Noise in strongly disordered conductors	190
	7.1 Basic ideas of the percolation theory	191
	7.2 Resistance fluctuations in percolation systems	196
	7.3 Experiments	201
8	$1/f$ noise and random telegraph noise	203
	8.1 Introduction	203
	8.2 Some general properties of $1/f$ noise	205
	8.2.1 Frequency-dependence of the spectral density and time-dependence of the correlation function	205
	8.2.2 Some statistical properties of $1/f$ noise and its stationarity	212
	8.2.3 Dependence of $1/f$ noise on mean voltage or current	219
	8.2.4 Anisotropy of the conductivity fluctuations	222
	8.2.5 Correlation length of conductivity fluctuations and dependence of noise on the dimensions of the conductor	225
	8.2.6 Empirical Hooge relationship	227
	8.3 Basic models of $1/f$ noise	230
	8.3.1 The concept of nonexponential kinetics	230
	8.3.2 The McWhorter model	234
	8.3.3 Two-level tunneling systems	235
	8.3.4 Other models	238
	8.4 $1/f$ noise in metals	239
	8.4.1 Direct connection between $1/f$ noise and defects' motion	239
	8.4.2 The mechanisms of $1/f$ noise in metals	243
	8.4.3 $1/f$ noise, internal friction, and anelastic piezoresistance in metals	246
	8.5 Low-frequency noise in semiconductors	249
	8.5.1 Surface noise	250
	8.5.2 Bulk $1/f$ noise	253
	8.6 Magnetic noise in spin glasses and other systems	255

8.7	Temperature fluctuations as a possible source of $1/f$ noise	266
8.8	Random telegraph noise	270
8.8.1	Introduction	270
8.8.2	RTN in metals	275
8.8.3	RTN in tunnel junctions	277
8.8.4	RTN in MOSFETs	279
8.9	Fluctuations with $1/f$ spectrum in other systems	282
8.10	General conclusions on $1/f$ noise	283
9	Noise in superconductors	287
9.1	Noise in Josephson junctions	288
9.1.1	Introduction	288
9.1.2	Noise in tunnel Josephson junctions	297
9.1.3	Noise in Josephson junctions with direct conduction and in shunted tunnel junctions	301
9.1.4	Effect of noise on the spectral width of Josephson oscillations	310
9.2	Noise in type II superconductors	313
9.2.1	Introduction	313
9.2.2	Flux-creep and flux-flow noise	314
9.2.3	Magnetic noise	318
9.2.4	Resistance noise in the transition region near T_c and in the normal state of high- T_c superconductors	322
