

MOBILE COMMUNICATIONS SERIES

INTRODUCTION TO
RADIO PROPAGATION
FOR FIXED AND MOBILE
COMMUNICATIONS

JOHN DOBLE

Artech House Publishers BOSTON • LONDON

CONTENTS

Acknowledgments	xiii
Introduction	xv
Part I Fixed-Link Systems	1
Chapter 1 Radio Refractive Index	3
1.1 Introduction	3
1.2 Background to Microwave Radio Links	3
1.3 Sea Level Value of RRI and Its Variation With Height	7
1.4 The Measurement of RRI	8
1.4.1 Radiosondes	8
1.4.2 Refractometers	8
1.4.3 RRI Profiles	10
1.5 Deviations From the Normal Lapse Rate	11
1.5.1 Subrefraction	11
1.5.2 Superrefraction	13
1.5.3 The Common Causes of the Lapse-Rate Deviations	13
1.6 Summary	15
References	16
Chapter 2 Fading on Microwave Systems	17
2.1 Introduction	17
2.2 The Mechanics of Fading	17

19	5.4	Using Rain-Rate Data to Calculate	
22		Path Attenuation	57
25	5.5	The Prediction of Rain Attenuation	59
25	5.5.1	The United Kingdom Model	59
25	5.5.2	The CCIR Model	60
29	5.5.3	Comparative Calculation	62
32	5.5.4	Polarization Scaling	63
33	5.6	Path Diversity	64
	5.7	Molecular Absorption	64
	5.8	Summary	66
35		References	67
35			
36			
36			
	Chapter 6	System Outage Modeling	69
	6.1	Introduction	69
40	6.2	CCIR Performance Objectives for Analog Systems	69
43	6.3	Multipath Prediction Models	73
44	6.3.1	The United Kingdom Model	73
44	6.3.2	CCIR Prediction Models	74
45	6.4	CCIR Performance Objectives for Digital Systems	78
	6.4.1	Availability Objectives	79
47	6.5	System Signatures	79
47	6.6	Performance Prediction Models for Digital Systems	83
48	6.6.1	Net-Fade Margin	83
49	6.6.2	Inband Amplitude Dispersion	84
49	6.6.3	Signature-based Models	84
	6.7	Summary	87
9		References	88
9			
	Chapter 7	System Planning	89
	7.1	Introduction	89
1	7.2	Basic Transmission Information	90
1	7.2.1	Free-Space Transmission Loss	90
2	7.2.2	Link Budget	91
3	7.2.3	Diffraction Fading and Fresnel-Zone Clearance	91
	7.2.4	Ray Curvature as a Function of RRI Lapse Rate	92
5	7.3	General Planning Concepts	95
5	7.3.1	Multihop Links	95
6	7.3.2	A Planning Exercise	97
6	7.3.3	The Problem of Water Along the Route	104

7.4	Summary	106
	References	107
Part II	Mobile Systems	111
Chapter 8	Basic Mobile Propagation Topics	111
8.1	Introduction	111
8.2	The Different Types of Mobile Services	112
8.2.1	Wide-Area Radio-Paging	112
8.2.2	Display Paging	112
8.2.3	Cordless Telephone (CT1)	113
8.2.4	Cordless Telephone (CT2)	113
8.2.5	Digital European Cordless Telephone (DECT)	113
8.2.6	Telepoint	114
8.2.7	Private Mobile Radio (PMR)	114
8.2.8	Basic (Noncellular) Car-Phone System	114
8.2.9	Analog Cellular	114
8.2.10	Digital Cellular	115
8.3	A General Discussion	115
8.4	Basic Propagation	117
8.4.1	VHF Propagation	117
8.4.2	UHF Propagation	119
8.4.3	EHF Propagation	120
8.5	Antenna Effects	120
8.5.1	Antenna Height	120
8.5.2	Antenna Beam Shaping	121
8.6	Radio Noise	121
8.7	Summary	121
	References	122
Chapter 9	Prediction Methods, Models, and Measurements for Mobile Systems in Rural, Suburban, and Urban Locations	123
9.1	Introduction	123
9.2	Path-Loss Predictions at VHF and UHF	124
9.2.1	Rural Areas	124
9.2.2	Urban and Suburban Areas	127
9.3	Path-Loss Predictions at the Lower Microwave Frequencies	127
9.3.1	Rural Areas	127

9.3.2	Urban and Suburban Areas	128
9.3.3	Limits of Application	132
9.4	Practical Measurements of Path Loss	134
9.5	Delay Measurements	135
9.5.1	Practical Measurement Techniques	135
9.5.2	Results Presentation	138
9.6	Summary	140
	References	141
Chapter 10	Propagation Aspects of Cellular Radio Systems	143
10.1	Introduction	143
10.2	The Evolution of Cellular Radio Systems	144
10.3	A Basic Description of Analog Cellular Radio	145
10.3.1	Cell and Cluster Sizes	145
10.3.2	Logging On	146
10.3.3	Handover	146
10.3.4	Further Aspects	147
10.4	Digital Cellular Systems	147
10.4.1	Digital System Objectives	147
10.4.2	Digital Speech	148
10.4.3	Data Transmission	149
10.4.4	Equalization	149
10.4.5	Power Control	149
10.4.6	Discontinuous Transmission	150
10.4.7	Handover	150
10.4.8	Carrier-to-Interference Ratio	150
10.5	System Capacity Engineering	150
10.6	Cost 231 Definitions of Cell Types	152
10.7	Miscellaneous Topics	153
10.7.1	Modeling of the Transmission Path	153
10.7.2	Doppler Shift	154
10.7.3	Fading Rates	154
10.7.4	Diffraction Effects Over and Around Buildings	154
10.7.5	Diversity Improvement	155
10.7.6	Multipath Delay	156
10.8	Summary	156
	References	158
Chapter 11	Communication Into and Within Buildings	159
11.1	Introduction	159

11.2	Background	160
11.3	Building Penetration Loss	161
	11.3.1 Measurements	161
	11.3.2 Height Gain	162
	11.3.3 Measurement Techniques	163
11.4	Inbuilding Losses	163
	11.4.1 Measurements	163
	11.4.2 Path-Loss Models	163
	11.4.3 Measurement Results	165
11.5	Comments on Available Models	166
11.6	Anomalous Experimental Results	167
	11.6.1 Penetration Loss Versus Frequency	167
	11.6.2 Height-Gain Factor	168
	11.6.3 Wall and Window Penetration Loss	169
11.7	Summary	170
	References	171
Chapter 12	Propagation in Fixed and Mobile Systems—A Comparison	173
12.1	Introduction	173
12.2	Path Loss	174
	12.2.1 Fixed Links	174
	12.2.2 Mobile Systems	174
12.3	Multipath and Mean-Depression Fading	175
	12.3.1 Fixed Links	175
	12.3.2 Mobile Systems	176
12.4	Multipath Delays	177
	12.4.1 Fixed Links	177
	12.4.2 Mobile Systems	177
12.5	Diversity	177
	12.5.1 Fixed Links	177
	12.5.2 Mobile Systems	178
12.6	Frequency Reuse	178
	12.6.1 Fixed Links	178
	12.6.2 Mobile Systems	179
12.7	Summary	179
