1 Digital communications overview, 1

- 1.1 Electronic communications, 1
- 1.2 Sources and sinks of information, 4
- 1.3 Digital communications equipment, 5
 - 1.3.1 CODECs, 6
 - 1.3.2 Source, security and error control coding, 7
 - 1.3.3 Multiplexers, 7
 - 1.3.4 MODEMs, 8
 - 1.3.5 Multiple accessing, 8
- 1.4 Radio receivers, 8
- 1.5 Signal transmission, 9
 - 1.5.1 Line transmission, 10
 - 1.5.2 Radio transmission, 13
- 1.6 Switching and networks, 15
- 1.7 Advantages of digital communications, 16
- 1.8 Summary, 16

1. Part One Signals and systems theory, 19

2 Periodic and transient signals, 21

- 2.1 Introduction, 21
- 2.2 Periodic signals, 22
 - 2.2.1 Sinusoids, cisoids and phasors, 22
 - 2.2.2 Fourier series, 27
 - 2.2.3 Conditions for existence, convergence and Gibb's phenomenon, 42
 - 2.2.4 Bandwidth, rates of change, sampling and aliasing, 45
- 2.3 Transient signals, 48
 - 2.3.1 Fourier transforms, 48

- 2.3.2 *Practical calculation of Fourier transforms*, 50
 - 2.3.3 *Fourier transform pairs*, 52
 - 2.3.4 *Fourier transform theorems and convolution*, 58
 - 2.4 **Power and energy spectra**, 68
 - 2.5 **Generalised orthogonal function expansions**, 70
 - 2.5.1 *Review of vectors*, 70
 - 2.5.2 *Vector interpretation of waveforms*, 72
 - 2.5.3 *Orthogonal and orthonormal signals*, 74
 - 2.5.4 *Evaluation of basis function coefficients*, 77
 - 2.5.5 *Error energy and completeness*, 78
 - 2.6 **Correlation functions**, 80
 - 2.7 **Summary**, 86
 - 2.8 **Problems**, 87
- 3 Random signals and noise**, 89
- 3.1 **Introduction**, 89
 - 3.2 **Probability theory**, 89
 - 3.2.1 *Conditional probabilities, joint probabilities and Bayes's rule*, 91
 - 3.2.2 *Statistical independence*, 92
 - 3.2.3 *Discrete probability of errors in a data block*, 93
 - 3.2.4 *Cumulative distributions and probability density functions*, 95
 - 3.2.5 *Moments, percentiles and modes*, 100
 - 3.2.6 *Joint and marginal pdfs, correlation and covariance*, 105
 - 3.2.7 *Joint moments, correlation and covariance*, 108
 - 3.2.8 *Joint Gaussian random variables*, 111
 - 3.2.9 *Addition of random variables and the central limit theorem*, 113
 - 3.3 **Random processes**, 117
 - 3.3.1 *Stationarity and ergodicity*, 118
 - 3.3.2 *Strict and loose sense Gaussian processes*, 119
 - 3.3.3 *Autocorrelation and power spectral density*, 121
 - 3.3.4 *Signal memory, decorrelation time and white noise*, 126
 - 3.3.5 *Cross correlation of random processes*, 127
 - 3.4 **Summary**, 128
 - 3.5 **Problems**, 129
- 4 Linear systems**, 133
- 4.1 **Introduction**, 133
 - 4.2 **Linear systems**, 133
 - 4.2.1 *Properties of linear systems*, 133
 - 4.2.2 *Importance of linear systems*, 135
 - 4.3 **Time domain description of linear systems**, 138
 - 4.3.1 *Linear differential equations*, 138
 - 4.3.2 *Discrete signals and matrix algebra*, 139
 - 4.3.3 *Continuous signals, convolution and impulse response*, 140

- 4.3.4 *Physical interpretation of $y(t) = h(t) * x(t)$* , 142
- 4.3.5 *Step response*, 144
- 4.4 **Frequency domain description**, 146
- 4.5 **Causality and the Hilbert transform**, 149
- 4.6 **Random signals and linear systems**, 152
 - 4.6.1 *PSDs and linear systems*, 153
 - 4.6.2 *Noise bandwidth*, 155
 - 4.6.3 *Pdf of filtered noise*, 155
 - 4.6.4 *Spectrum analysers*, 157
- 4.7 **Non-linear systems and transformation of random variables**, 158
 - 4.7.1 *Rayleigh probability density function*, 159
 - 4.7.2 *Chi-square distributions*, 161
- 4.8 **Summary**, 163
- 4.9 **Problems**, 164

2. Part Two **Digital communications principles**, 167

5 **Sampling, multiplexing and PCM**, 169

- 5.1 **Introduction**, 169
- 5.2 **Pulse modulation**, 169
- 5.3 **Sampling**, 171
 - 5.3.1 *Natural and flat topped sampling*, 172
 - 5.3.2 *Baseband sampling and Nyquist's criterion*, 173
 - 5.3.3 *Aliasing*, 175
 - 5.3.4 *Practical sampling, reconstruction and signal to distortion ratio*, 176
 - 5.3.5 *Bandpass sampling*, 180
- 5.4 **Analogue pulse multiplexing**, 183
- 5.5 **Quantised pulse amplitude modulation**, 186
- 5.6 **Signal to quantisation noise ratio (SN_qR)**, 188
- 5.7 **Pulse code modulation**, 190
 - 5.7.1 *SN_qR for linear PCM*, 190
 - 5.7.2 *SNR for decoded PCM*, 192
 - 5.7.3 *Companded PCM*, 195
 - 5.7.4 *PCM multiplexing*, 199
- 5.8 **Bandwidth reduction techniques**, 200
 - 5.8.1 *Delta PCM*, 200
 - 5.8.2 *Differential PCM*, 201
 - 5.8.3 *Adaptive DPCM*, 202
 - 5.8.4 *Delta modulation*, 203
 - 5.8.5 *Adaptive delta modulation*, 207
- 5.9 **Summary**, 209
- 5.10 **Problems**, 210

6 Baseband transmission and line coding, 212

- 6.1 Introduction, 212
- 6.2 Baseband centre point detection, 212
 - 6.2.1 *Baseband binary error rates in Gaussian noise*, 213
 - 6.2.2 *Multilevel baseband signalling*, 218
- 6.3 Error accumulation over multiple hops, 219
- 6.4 Line coding, 222
 - 6.4.1 *Unipolar signalling*, 226
 - 6.4.2 *Polar signalling*, 227
 - 6.4.3 *Dipolar signalling*, 227
 - 6.4.4 *Bipolar alternate mark inversion signalling*, 228
 - 6.4.5 *Pulse synchronisation and HDBn coding*, 228
 - 6.4.6 *Coded mark inversion (CMI)*, 229
 - 6.4.7 *nBmT coding*, 230
- 6.5 Multiplex telephony, 230
- 6.6 Digital signal regeneration, 231
 - 6.6.1 *PCM line codes*, 232
 - 6.6.2 *Equalisation*, 233
 - 6.6.3 *Eye diagrams*, 235
 - 6.6.4 *Crosstalk*, 237
- 6.7 Symbol timing recovery, 239
- 6.8 Repeater design, 242
- 6.9 Summary, 242
- 6.10 Problems, 243

7 Decision theory, 245

- 7.1 Introduction, 245
- 7.2 A priori, conditional and a posteriori probabilities, 246
- 7.3 Symbol transition matrix, 247
 - 7.3.1 *Binary symmetric channel*, 247
- 7.4 Bayes's decision criterion, 250
 - 7.4.1 *Decision costs*, 250
 - 7.4.2 *Expected conditional decision costs*, 250
 - 7.4.3 *Optimum decision rule*, 251
 - 7.4.4 *Optimum decision threshold voltage*, 252
 - 7.4.5 *Average unconditional decision cost*, 253
- 7.5 Neyman-Pearson decision criterion, 257
- 7.6 Summary, 258
- 7.7 Problems, 259

8 Optimum filtering for transmission and reception, 260

- 8.1 Introduction, 260
- 8.2 Pulse shaping for optimum transmissions, 260
 - 8.2.1 *Intersymbol interference (ISI)*, 261
 - 8.2.2 *Bandlimiting of rectangular pulses*, 261
 - 8.2.3 *ISI free signals*, 263
 - 8.2.4 *Nyquist's vestigial symmetry theorem*, 267
 - 8.2.5 *Raised cosine filtering*, 267
 - 8.2.6 *Nyquist filtering for rectangular pulses*, 270
 - 8.2.7 *Duobinary signalling*, 270
 - 8.2.8 *Partial response signalling*, 278
- 8.3 Pulse filtering for optimum reception, 279
 - 8.3.1 *Matched filtering*, 280
 - 8.3.2 *Correlation detection*, 284
 - 8.3.3 *Decision instant SNR*, 289
 - 8.3.4 *BER performance of optimum receivers*, 292
 - 8.3.5 *Comparison of matched filtering and centre point detection*, 295
 - 8.3.6 *Differences between matched filtering and correlation*, 296
- 8.4 Root raised cosine filtering, 296
- 8.5 Equalisation, 298
- 8.6 Summary, 301
- 8.7 Problems, 302

9 Information theory and source coding, 305

- 9.1 Introduction, 305
- 9.2 Information and entropy, 306
 - 9.2.1 *The information measure*, 306
 - 9.2.2 *Multisymbol alphabets*, 307
 - 9.2.3 *Commonly confused entities*, 308
 - 9.2.4 *Entropy of a binary source*, 308
- 9.3 Conditional entropy and redundancy, 309
- 9.4 Information loss due to noise, 312
- 9.5 Source coding, 316
 - 9.5.1 *Code efficiency*, 316
 - 9.5.2 *Decoding variable length codewords*, 317
- 9.6 Variable length coding, 319
 - 9.6.1 *Huffman coding*, 319
- 9.7 Source coding examples, 321
 - 9.7.1 *Source coding for speech signals*, 322
 - 9.7.2 *High quality audio coders*, 325
 - 9.7.3 *String coding*, 326
- 9.8 Summary, 327
- 9.9 Problems, 328

10 Error control coding, 329

- 10.1 Introduction, 329
 - 10.1.1 *Error rate control concepts*, 331
 - 10.1.2 *Threshold phenomenon*, 332
 - 10.1.3 *Applications for error control*, 333
- 10.2 Hamming distance and codeword weight, 333
- 10.3 (n, k) Block codes, 334
 - 10.3.1 *Single parity check code*, 335
- 10.4 Probability of error in n -digit codewords, 338
- 10.5 Group codes, 339
 - 10.5.1 *Members of the group code family*, 339
 - 10.5.2 *Performance prediction*, 340
 - 10.5.3 *Error detection and correction capability*, 340
- 10.6 Nearest neighbour decoding of block codes, 341
 - 10.6.1 *Hamming bound*, 342
- 10.7 Syndrome decoding, 343
 - 10.7.1 *The generator matrix*, 343
 - 10.7.2 *Syndrome table for error correction*, 344
- 10.8 Cyclic codes, 347
 - 10.8.1 *Polynomial codeword generation*, 348
 - 10.8.2 *Interleaving*, 351
- 10.9 Encoding of convolutional codes, 351
 - 10.9.1 *Tree diagram representation*, 353
 - 10.9.2 *Trellis diagram*, 353
 - 10.9.3 *State transition diagram*, 354
- 10.10 Viterbi decoding of convolutional codes, 354
 - 10.10.1 *Decoding window*, 357
 - 10.10.2 *Sequential decoding*, 358
- 10.11 Practical coders, 359
- 10.12 Summary, 361
- 10.13 Problems, 363

11 Bandpass modulation of a carrier signal, 365

- 11.1 Introduction, 365
- 11.2 Spectral and power efficiency, 365
- 11.3 Binary IF modulation, 366
 - 11.3.1 *Binary amplitude shift keying (and on-off keying)*, 366
 - 11.3.2 *Binary phase shift keying (and phase reversal keying)*, 371
 - 11.3.3 *Binary frequency shift keying*, 374
 - 11.3.4 *BFSK symbol correlation and Sunde's FSK*, 378
 - 11.3.5 *Comparison of binary shift keying techniques*, 381
 - 11.3.6 *Carrier recovery, phase ambiguity and DPSK*, 384
- 11.4 Modulation techniques with increased spectral efficiency, 386
 - 11.4.1 *Channel capacity*, 387

- 11.4.2 *M*-symbol phase shift keying, 388
 - 11.4.3 Amplitude phase keyed and quadrature amplitude modulation, 392
 - 11.4.4 Quadrature phase shift keying (QPSK) and offset QPSK, 397
 - 11.4.5 Minimum shift keying, 403
 - 11.4.6 Gaussian MSK, 408
 - 11.4.7 Trellis coded modulation, 410
 - 11.5 Power efficient modulation techniques, 413
 - 11.5.1 Multidimensional signalling and MFSK, 413
 - 11.5.2 Optimum constellation point packing, 420
 - 11.5.3 Optimum constellation point boundaries, 420
 - 11.6 Data modems, 421
 - 11.7 Summary, 422
 - 11.8 Problems, 423
- 12 System noise and communications link budgets, 426**
- 12.1 Introduction, 426
 - 12.2 Physical aspects of noise, 426
 - 12.2.1 Thermal noise, 426
 - 12.2.2 Non-thermal noise, 431
 - 12.2.3 Combining white noise sources, 434
 - 12.3 System noise calculations, 437
 - 12.3.1 Noise temperature, 438
 - 12.3.2 Noise temperature of cascaded subsystems, 440
 - 12.3.3 Noise factor and noise figure, 443
 - 12.4 Radio communication link budgets, 446
 - 12.4.1 Antenna gain, effective area and efficiency, 446
 - 12.4.2 Free space and plane earth signal budgets, 451
 - 12.4.3 Antenna temperature and radio noise budgets, 458
 - 12.4.4 Receiver equivalent input CNR, 460
 - 12.4.5 Multipath fading and diversity reception, 462
 - 12.5 Summary, 463
 - 12.6 Problems, 465
- 13 Communication systems simulation, 468**
- 13.1 Introduction, 468
 - 13.2 Equivalent complex baseband representations, 470
 - 13.2.1 Equivalent baseband signals, 470
 - 13.2.2 Equivalent baseband systems, 472
 - 13.2.3 Equivalent baseband system output, 473
 - 13.2.4 Equivalent baseband noise, 478
 - 13.3 Sampling and quantisation, 480
 - 13.3.1 Sampling equivalent baseband signals, 481
 - 13.3.2 Quantisation, 482
 - 13.4 Modelling of signals, noise and systems, 483

- 13.4.1 *Random numbers*, 484
- 13.4.2 *Random digital symbol streams*, 485
- 13.4.3 *Noise and interference*, 489
- 13.4.4 *Time invariant linear systems*, 491
- 13.4.5 *Non-linear and time varying systems*, 491
- 13.5 Transformation between time and frequency domains, 493
 - 13.5.1 *Discrete Fourier transform*, 493
 - 13.5.2 *Discrete Fourier series*, 495
 - 13.5.3 *DFS spectrum and rearrangement of spectral lines*, 496
 - 13.5.4 *Conservation of information*, 497
 - 13.5.5 *Phasor interpretation of DFS*, 497
 - 13.5.6 *Inverse DFS and DFT*, 497
 - 13.5.7 *DFT accuracy*, 499
- 13.6 Discrete and cyclical convolution, 505
- 13.7 Estimation of BER, 508
 - 13.7.1 *Monte Carlo simulation*, 509
 - 13.7.2 *Quasi-analytic simulation*, 510
- 13.8 Summary, 517

3. Part Three Applications, 519

14 Fixed point microwave communications, 520

- 14.1 Introduction, 520
- 14.2 *Terrestrial microwave links*, 520
 - 14.2.1 *Analogue systems*, 522
 - 14.2.2 *Digital systems*, 523
 - 14.2.3 *LOS link design*, 524
 - 14.2.4 *Other propagation considerations for terrestrial links*, 534
- 14.3 Fixed point satellite communications, 542
 - 14.3.1 *Satellite frequency bands and orbital spacing*, 545
 - 14.3.2 *Earth station look angles and satellite range*, 546
 - 14.3.3 *Satellite link budgets*, 547
 - 14.3.4 *Slant path propagation considerations*, 554
 - 14.3.5 *Analogue FDM/FM/FDMA trunk systems*, 561
 - 14.3.6 *Digital TDM/PSK/TDMA trunk systems*, 564
 - 14.3.7 *DA-TDMA, DSI and random access systems*, 570
 - 14.3.8 *Economics of satellite communications*, 571
 - 14.3.9 *VSAT systems*, 571
 - 14.3.10 *Satellite-switched-TDMA and on-board signal processing*, 572
- 14.4 Summary, 573
- 14.5 Problems, 575

15 Mobile and cellular radio, 578

- 15.1 Introduction, 578
 - 15.1.1 *Private mobile radio*, 578
 - 15.1.2 *Radio paging systems*, 580
- 15.2 Mobile radio link budget and channel characteristics, 580
 - 15.2.1 *Prediction of median signal strength*, 581
 - 15.2.2 *Slow and fast fading*, 582
 - 15.2.3 *Time dispersion, selective fading, and coherence bandwidth*, 583
- 15.3 Nationwide cellular radio communications, 584
 - 15.3.1 *Introduction*, 584
 - 15.3.2 *Personal cordless communications*, 585
 - 15.3.3 *Analogue cellular radio communication*, 586
 - 15.3.4 *Cell sizes*, 586
 - 15.3.5 *System configuration*, 591
- 15.4 Digital TDMA terrestrial cellular systems, 589
 - 15.4.1 *Systems*, 589
 - 15.4.2 *Data format and modulation*, 591
 - 15.4.3 *Speech and channel coding*, 592
 - 15.4.4 *Other operational constraints*, 593
- 15.5 Code division multiple access (CDMA), 594
 - 15.5.1 *The CDMA concept*, 594
 - 15.5.2 *Receiver design*, 595
 - 15.5.3 *Spreading sequence design*, 598
 - 15.5.4 *Data modulation*, 602
 - 15.5.5 *Multipath responses*, 603
 - 15.5.6 *The IS-95 system*, 604
 - 15.5.7 *Frequency hopped transmission*, 607
- 15.6 Mobile satellite based systems, 607
- 15.7 The personal communications network, 611
- 15.8 Summary, 612

16 Video transmission and storage, 614

- 16.1 Introduction, 614
- 16.2 Colour representation, 615
- 16.3 Conventional TV transmission systems, 617
 - 16.3.1 *PAL encoding*, 617
 - 16.3.2 *PAL television receiver*, 619
 - 16.3.3 *Other encoding schemes*, 620
- 16.4 High definition TV, 620
 - 16.4.1 *What is HDTV?*, 620
 - 16.4.2 *Studio standards*, 622
 - 16.4.3 *Transmissions*, 622
- 16.5 Digital video, 623
- 16.6 Video data compression, 624

- 16.6.1 *Run-length coding*, 625
- 16.6.2 *Conditional replenishment*, 626
- 16.6.3 *Transform coding*, 626
- 16.7 *Compression standards*, 628
 - 16.7.1 *COST 211*, 628
 - 16.7.2 *JPEG*, 629
 - 16.7.3 *MPEG*, 631
 - 16.7.4 *H.261 and H.263*, 632
 - 16.7.5 *Model based coding*, 634
- 16.8 *Packet video*, 635
- 16.9 *Summary*, 637
- 16.10 *Problems*, 638

4. Part Four Networks, 639

17 Queuing theory for packet networks, 640

- 17.1 *Introduction*, 641
- 17.2 *The arrival process*, 642
 - 17.2.1 *pdf for j arrivals in t seconds*, 642
 - 17.2.2 *CD and pdf for the time between arrivals*, 644
 - 17.2.3 *Other arrival patterns*, 645
- 17.3 *The service process*, 645
 - 17.3.1 *Service time distributions*, 645
 - 17.3.2 *Single server queues*, 646
 - 17.3.3 *Multiserver queues*, 646
- 17.4 *The simple single server queue*, 646
 - 17.4.1 *Simple queue analysis*, 646
 - 17.4.2 *Queue parameters*, 648
 - 17.4.3 *Classical queue with single server*, 649
 - 17.4.4 *Queue length and waiting times*, 651
- 17.5 *Packet speech transmission*, 653
 - 17.5.1 *The components of packet speech*, 653
 - 17.5.2 *Speech service performance*, 656
- 17.6 *Summary*, 656
- 17.7 *Problems*, 657

18 Network topology and protocols, 658

- 18.1 *Introduction*, 658
- 18.2 *Network topologies and examples*, 660
 - 18.2.1 *Point-to-point*, 661
 - 18.2.2 *Multidrop*, 661
 - 18.2.3 *Star*, 661
 - 18.2.4 *Ring*, 662
 - 18.2.5 *Mesh*, 664

- 18.2.6 *Bus*, 665
- 18.2.7 *Transmission media*, 666
- 18.3 **Network coverage and access**, 667
 - 18.3.1 *Bridges and gateways*, 668
 - 18.3.2 *Network switches*, 668
- 18.4 **Reference model for terminal interfacing**, 670
 - 18.4.1 *The ISO model*, 670
 - 18.4.2 *Connectionless transmission*, 673
 - 18.4.3 *Physical layer protocol*, 673
 - 18.4.4 *Synchronisation and line coding*, 673
- 18.5 **Medium access control**, 674
 - 18.5.1 *Random access and demand assignment protocols*, 674
 - 18.5.2 *Fixed assignment protocols*, 675
 - 18.5.3 *Adaptive assignment protocols*, 676
- 18.6 **International standards for data transmissions**, 676
 - 18.6.1 *X.25*, 676
 - 18.6.2 *IEEE 802*, 676
- 18.7 **Network examples**, 677
 - 18.7.1 *Manufacturers application protocol (MAP)*, 677
 - 18.7.2 *Admiral*, 677
 - 18.7.3 *Military systems*, 677
 - 18.7.4 *Fibre distributed data interface (FDDI)*, 678
 - 18.7.5 *Wireless networks*, 679
 - 18.7.6 *Internet*, 680
- 18.8 **Summary**, 681
- 19 Public networks and the integrated services digital network (ISDN), 683**
 - 19.1 **Introduction**, 683
 - 19.2 **The telephone network**, 683
 - 19.3 **Plesiochronous multiplex**, 687
 - 19.4 **SONET and SDH**, 692
 - 19.4.1 *Advantages and flexibility*, 692
 - 19.4.2 *Synchronous signal structure*, 693
 - 19.4.3 *Frame structure*, 694
 - 19.4.4 *Payload pointer*, 696
 - 19.4.5 *Payload capacity partitioning*, 697
 - 19.5 **Fibre optic transmission links**, 698
 - 19.5.1 *Fibre types*, 698
 - 19.5.2 *Fibre transmission systems*, 700
