

Environmental Pollution

Metals in Society and in the Environment

A Critical Review of Current Knowledge on Fluxes, Speciation, Bioavailability and Risk for Adverse Effects of Copper, Chromium, Nickel and Zinc

Lars Landner and Rudolf Reuther

0 EXECUTIVE SUMMARY AND CONCLUSIONS.....	1
0.1 Introduction	1
0.2 Metal Fluxes from Society to the Environment and between Environmental Media.....	3
0.2.1 The European Copper Cycle in the Mid-1990s.....	4
0.2.2 Metal Fluxes from Mining Waste – Falun Copper Mine	5
0.2.3 Urban Metal Flows – the Case of Stockholm.....	6
0.2.4 Critical Steps in Metal Fluxes from Cities to the Environment.....	7
0.3 Speciation, Bioavailability and Effects of Trace Metals in the Environment	8
0.3.1 In the Water Column - BLM as a Tool for Prediction of Toxicity	9
0.3.2 In Aquatic Sediments – AVS as a Tool for Prediction.....	10
0.3.3 In Soils – Laboratory versus Field Tests	11
0.4 General Conclusions.....	12
1 PURPOSE OF THIS REVIEW.....	15
1.1 Background and justification.....	15
1.2 The need and how to meet it	17
1.3 Target groups for the updated report.....	18
1.4 Implementation of the work	18
2 GLOBAL EXTRACTION, PRODUCTION AND CONSUMPTION.....	21
2.1 Copper	21
2.2 Nickel	22
2.3 Zinc.....	23

3	METAL CYCLES IN DEFINED GEOGRAPHICAL AREAS: EUROPE, THE NETHERLANDS AND STOCKHOLM	25
3.1	Example 1: The European Copper Cycle	25
3.1.1	Introduction	26
3.1.2	Selection of boundaries of the system to be studied	28
3.1.3	Some definitions and characterisation of the technical components.....	29
3.1.3.1.	Production (mining, milling, concentration, smelting, refining).....	29
3.1.3.2.	Fabrication, manufacturing and use	30
3.1.4	Waste management subsystem.....	33
3.1.5	Summary of stocks and flows of copper in European society, in 1994.....	37
3.2	Example 2: Dynamic Modelling of Metal Flows in the Netherlands; Cu and Zn.....	40
3.2.1	Models used.....	40
3.2.2	Summary of main results.....	42
3.2.3	Critical review of the Dutch calculations	46
3.3	Example 3: Urban Metal Flows – Stockholm; Cr, Cu, Ni and Zn	48
3.3.1	New aspects of studies on urban metal flows.....	50
3.3.2	Stock of metals in Stockholm.....	51
3.3.3	Outflows of metals from existing stocks to the solid waste compartment.....	53
3.3.4	Outflows via other routes, e.g. diffuse emissions from goods	53
3.3.5	Metal fluxes to and from sewage treatment plants in Stockholm.....	55
3.3.6	Constraints in metal cycling to arable land with sewage sludge.....	59
3.3.7	Metal fluxes with groundwater in Stockholm	59
3.3.8	Metal accumulation and metal pools in urban soils in Stockholm.....	61
3.3.9	Metal fluxes to sediments of lakes and coastal areas in Stockholm.....	65

4	CRITICAL STEPS IN METAL FLUXES FROM SOCIETY TO THE ENVIRONMENT – SOME CASE STUDIES	71
4.1	Case Study 1: Corrosion and runoff of metals from roofing materials made of copper, galvanized steel or stainless steel (Cu, Zn, Cr and Ni)	72
4.1.1	Definitions, background and experimental approaches	73
4.1.2	Some principal results	75
4.1.3	Releases and fluxes of copper	76
4.1.4	Releases and flows of zinc	80
4.1.5	Releases and flows of chromium and nickel	84
4.2	Case Study 2: Relative importance of the traffic sector for metal fluxes from the urban environment to aquatic ecosystems	86
4.2.1	Difficulties to quantify the contribution of street traffic to trace metal fluxes	87
4.2.2	Bioavailability to aquatic organisms of traffic-emitted metals	88
4.2.3	Level of contamination with bioavailable trace metals in the waterways of central Stockholm, compared to other waters	92
4.2.4	Possible over-interpretation of bioaccumulation data – a critical review	94
4.2.5	Which conclusions from the study are justified?	96
4.3	Case Study 3: Metal fluxes from households to STPs, sludge and agricultural soils	98
4.3.1	Origin of trace metals in STPs and in sewage sludge	99
4.3.2	Assessment of the causes of copper release from tap water pipes	101
4.3.3	Use of sewage sludge as a fertiliser in agriculture	105
4.3.4	Permitted trace metal loads to agricultural soils	106
4.3.5	Sustainable trace metal loadings to agricultural soils	108
4.3.5.1	Trace metal deficiency symptoms and how to correct them	109
4.3.5.2	Application of sewage sludge to soils – risk of metal toxicity to soil ecosystems	110
4.3.5.3	Long-term field studies – effects of sewage sludge application to soils	110

4.3.5.4	Conclusions regarding sustainable trace metal loadings to agricultural soils	117
4.4	Case Study 4: Metal fluxes from mine waste to rivers – Falun Copper Mine.....	120
4.4.1	Background and definition of the case to be discussed....	121
4.4.2	Brief description of the level of pollution with metals in water and sediments of receiving rivers and lakes	124
4.4.3	Biological responses to the enhanced metal concentrations.....	127
4.4.4	Some conclusions from the Falun studies	130
4.5	Summing up: Fluxes of Cr, Cu, Ni and Zn from Society to the Environment	131
5	SPECIATION, MOBILITY AND BIOAVAILABILITY OF METALS IN THE ENVIRONMENT	139
5.1	Introduction	139
5.1.1	General considerations	139
5.1.2	Definitions	141
5.1.3	Fundamental properties of the selected metals.....	142
	Chromium.....	144
	Copper	145
	Nickel	146
	Zinc.....	147
5.2	In surface waters.....	149
5.2.1	Metal speciation in the aqueous (dissolved) phase	151
5.2.2	Adsorption versus bioavailability.....	156
5.2.3	Competition between aqueous and solid phases	158
5.3	In groundwaters.....	160
5.4	In aquatic sediments	163
5.4.1	Introduction	163
5.4.2	Today's knowledge on metal speciation in sediment/water systems	164
5.4.2.1	General overview	165
5.4.2.2	Total concentration approach	166
5.4.2.3	Partly theoretical approaches to metal speciation	167
5.4.2.4	More empirical approaches to metal speciation (chemical extraction).....	168
5.4.3	The Acid-Volatile Sulphides (AVS) concept.....	170

5.4.3.1	Development and application	172
5.4.3.2	Refinement of the "AVS hypothesis"	181
5.4.3.3	Operational drawbacks of SEM/AVS-based approaches	187
5.4.3.4	New empirical evidence	192
5.4.4	Chemical extraction and mobility	197
5.4.5	New spectroscopic approaches	201
5.4.6	Bioturbation, resuspension and bioirrigation	206
5.4.7	Metal-ligand interactions	214
5.4.7.1	Free ion activity model (FIAM)	215
5.4.7.2	Surface complexation	218
5.4.8	Speciation-bioavailability interactions in sediment-ingesting biota	222
5.4.8.1	Absorption efficiency (AE)	223
5.4.8.2	Gut juice extraction	227
5.4.9	Redox effects	230
5.5	In soils	232
5.5.1	Introduction	232
5.5.2	Metal adsorption and partitioning	233
5.5.3	Chemical extraction and plant uptake	237
5.5.4	Surface reactions	246
5.5.5	Redox effects	250
5.5.6	Aging and weathering	254
5.5.7	Sludge application and contaminated soils	258
5.6	In biota	265
5.7	A proposal for "natural" or "preindustrial" regional background levels of metals in the sediment in waters surrounding Stockholm	271
6	BIOTIC LIGAND MODELS	275
6.1	Need for improved models to assess bioavailable fraction of metals	276
6.2	Development of Biotic Ligand Models	279
6.3	Application of BLMs	284
7	TOXIC AND OTHER ADVERSE BIOLOGICAL EFFECTS OF TRACE METALS	289
7.1	Toxicity to aquatic organisms in the water column	290
7.1.1	Copper	292
7.1.1.1	Sensitivity to copper of different aquatic organisms	292

7.1.1.2	Toxicity of copper estimated by means of BLMs	297
7.1.2	Nickel	302
7.1.3	Zinc.....	303
7.1.3.1	Sensitivity to zinc of different aquatic organisms	303
7.1.3.2	Toxicity of zinc estimated by means of BLMs	304
7.2	Toxicity to sediment-dwelling organisms	307
7.2.1	Some general considerations	309
7.2.2	Field validation of the SEM/AVS model for zinc.....	311
7.2.3	Metal release and toxicity of sediments from the Stockholm area.....	314
7.2.3.1	Background and experimental design	314
7.2.3.2	Experimental results: transfer of metals from sediments to water and organisms.....	316
7.2.3.3	Experimental results: toxicity to amphipods.....	317
7.2.3.4	Interpretation of results	318
7.2.3.5	Some remarks on experimental design in sediment research.....	320
7.3	Toxicity to soil-dwelling organisms and to higher plants	321
7.3.1	Some general considerations	323
7.3.2	Summary of toxicity thresholds for soil organisms and plants.....	326
7.3.2.1	Copper	326
7.3.2.2	Zinc.....	328
7.3.3	Toxicity of trace metals in contaminated urban soils.....	330
7.3.4	Systematic assessment of zinc toxicity in laboratory spiked soils and in gradually contaminated field soils.....	331
7.4	Essentiality, regulation and deficiency.....	333
7.4.1	Some useful definitions	334
7.4.2	Examples of copper essentiality and copper tolerance.....	336
7.4.3	Examples of zinc essentiality and zinc tolerance	338
