

STAINLESS STEEL

Revised by
R. A. LULA

American Society for Metals

Contents

- 1 The Usefulness of Stainless Steels 1**
- Classification 2
 - Properties 4
 - Selection 5
 - Selection Based on Life Cycle Cost 8
 - Applications Involving Resistance to Corrosion 9
- 2 A Brief History 13**
- 3 Some Metallurgical Principles and Heat Treatment Processes 17**
- Structure of Metals 17
 - Strengthening Mechanisms 22
 - Heat Treatment Processes 25
- 4 Metallurgy and Properties of Wrought Stainless Steels 29**
- Specifications 33
 - Martensitic Stainless Steels 33
 - Ferritic Stainless Steels 52
 - Austenitic Stainless Steels 60
 - Manganese-Substituted Austenitic Stainless Steels 70
 - Duplex Austenitic-Ferritic Stainless Steels 71
 - Precipitation-Hardening Stainless Steels 80
 - Stainless-Clad Steels 88

5	Cast Stainless Steels	89
6	Fabrication of Stainless Steels	93
	Cold Forming	93
	Hot Forming	98
	Cutting	100
	Joining	101
	Machining	112
	Finishing	114
	Powder Metallurgy	117
7	Principles of Corrosion	119
	Mechanism of Corrosion	119
	Corrosion in an Aqueous Environment	120
	Sources of Corrosion Current	127
	Corrosion in a Gaseous Environment	127
8	Corrosion Resistance of Stainless Steels	129
	Atmospheric Corrosion	130
	Corrosion in Liquid Environments	138
	Corrosion Failures	139
9	Corrosion Testing of Stainless Steels	153
	Laboratory Testing	153
	Pilot Plant Testing	160
	Field Testing	160
	Index	161
