# TABLE OF CONTENTS

## PART I: FUNDAMENTALS

### Chapter One

|  |          |
|--|----------|
| <b>Introduction</b> .....  | <b>1</b> |
| I. Historical Development.....                                       | 1        |
| II. Basic Concepts and Definitions.....                              | 3        |
| III. Classification of Polymers.....                                 | 6        |
| A. Natural vs. Synthetic.....  | 6        |
| B. Polymer Structure.....  | 6        |
| X 1. Linear, Branched, or Cross-Linked Ladder vs. Functionality..... | 6        |
| X 2. Amorphous or Crystalline.....                                   | 13       |
| 3. Homopolymer or Copolymer.....                                     | 14       |
| 4. Fibers, Plastics, or Elastomers.....                              | 16       |
| C. Polymerization Mechanism.....                                     | 16       |
| D. Thermal Behaviour.....  | 17       |
| E. Preparative Technique.....  | 18       |
| F. End Use.....  | 19       |
| IV. Problems.....  | 19       |
| References.....  | 23       |

### Chapter Two

|  |           |
|--|-----------|
| <b>Polymerization Mechanisms</b> .....           | <b>25</b> |
| I. Introduction.....                             | 25        |
| II. Chain-Reaction Polymerization.....           | 25        |
| A. Initiation.....                               | 25        |
| B. Propagation.....                              | 27        |
| C. Termination.....                              | 28        |
| D. Chain Transfer.....                           | 28        |
| E. Diene Polymerization.....                     | 29        |
| III. Ionic and Coordination Polymerizations..... | 32        |
| A. Cationic Polymerization.....                  | 32        |
| B. Anionic Polymerization.....                   | 32        |
| C. Coordination Polymerization.....              | 33        |
| IV. Step-Growth Polymerization.....              | 34        |
| A. Typical Step-Growth Polymerizations.....      | 38        |
| 1. Polyesters.....                               | 38        |
| 2. Polycarbonates.....                           | 40        |
| 3. Polyamides.....                               | 40        |
| 4. Polyimides.....                               | 42        |
| 5. Polybenzimidazoles and Polybenzoxazoles.....  | 44        |
| 6. Aromatic Ladder Polymers.....                 | 46        |
| 7. Formaldehyde Resins.....                      | 48        |
| 8. Polyethers.....                               | 51        |
| 9. Polysulfides.....                             | 51        |
| 10. Polysulfones.....                            | 51        |
| V. Ring-Opening Polymerization.....              | 52        |
| A. Poly(Propylene Oxide).....                    | 52        |
| B. Epoxy Resins.....                             | 54        |
| C. Polycaprolactam (Nylon 6).....                | 54        |
| VI. Problems.....                                | 56        |
| References.....                                  | 57        |

## Chapter Three

|   |           |
|---|-----------|
| <b>Chemical Bonding and Polymer Structure</b> .....               | <b>59</b> |
| I. Introduction.....  | 59        |
| II. Chemical Bonding.....   | 59        |
| A. The Ionic Bond.....  | 59        |
| B. The Covalent Bond.....   | 60        |
| C. Dipole Forces.....   | 60        |
| D. Hydrogen Bond.....   | 61        |
| E. Induction Forces.....  | 62        |
| F. van der Waals (Dispersion) Forces.....                         | 62        |
| III. Primary Structure.....                                       | 64        |
| A. Polarity of Monomers.....                                      | 64        |
| IV. Secondary Structure.....                                      | 65        |
| A. Configuration.....   | 65        |
| 1. Diene Polymerization.....                                      | 66        |
| 2. Tacticity.....   | 67        |
| B. Conformation.....  | 67        |
| C. Molecular Weight.....  | 68        |
| V. Tertiary Structure.....  | 73        |
| A. Secondary Bonding Forces (Cohesive Energy Density).....        | 73        |
| B. Crystalline and Amorphous Structure of Polymers.....           | 76        |
| 1. Crystallization Tendency.....                                  | 76        |
| 2. Structural Regularity.....                                     | 77        |
| 3. Chain Flexibility.....   | 77        |
| 4. Polarity.....  | 78        |
| C. Morphology of Crystalline Polymers.....                        | 81        |
| 1. Crystal Structure of Polymers.....                             | 81        |
| 2. Morphology of Polymer Single Crystals Grown from Solution..... | 86        |
| 3. Morphology of Polymers Crystallized from the Melt.....         | 87        |
| VI. Crystallinity and Polymer Properties.....                     | 89        |
| VII. Problems.....  | 90        |
| References.....   | 92        |

## Chapter Four

|  |           |
|--|-----------|
| <b>Thermal Transitions in Polymers</b> .....   | <b>95</b> |
| I. Introduction.....   | 95        |
| II. The Glass Transition Temperature.....  | 96        |
| A. Molecular Motion and Glass Transition.....  | 97        |
| B. Theories of Glass Transition and Measurement of the Glass Transition Temperature..... | 98        |
| 1. Kinetic Theory.....   | 98        |
| 2. Equilibrium Theory.....   | 98        |
| 3. Free Volume Theory.....   | 99        |
| C. Factors Affecting Glass Transition Temperature.....                                   | 99        |
| 1. Chain Flexibility.....  | 100       |
| 2. Geometric Factors.....  | 100       |
| 3. Interchain Attractive Forces.....   | 100       |
| 4. Copolymerization.....   | 103       |
| 5. Molecular Weight.....   | 105       |
| 6. Cross-Linking and Branching.....  | 106       |
| 7. Crystallinity.....  | 107       |
| 8. Plasticization.....   | 107       |
| III. The Crystalline Melting Point.....  | 108       |
| A. Factors Affecting the Crystalline Melting Point, $T_M$ .....                          | 109       |
| 1. Intermolecular Bonding.....   | 109       |
| 2. Effect of Structure.....  | 111       |

|   |            |
|---|------------|
| 3. Chain Flexibility.....                                 | 111        |
| 4. Copolymerization.....                                  | 113        |
| IV. Problems.....   | 114        |
| References.....   | 115        |
| <br>  |            |
| <b>Chapter Five</b>                                       |            |
| <b>Polymer Modification.....</b>                          | <b>117</b> |
| I. Introduction.....                                      | 117        |
| II. Copolymerization.....                                 | 117        |
| A. Styrene-Butadiene Copolymers.....                      | 117        |
| 1. Styrene-Butadiene Rubber (SBR) (Random Copolymer)..... | 118        |
| 2. Styrene-Butadiene Block Polymers.....                  | 119        |
| B. Ethylene Copolymers.....                               | 119        |
| C. Acrylonitrile-Butadiene-Styrene Copolymers (ABS).....  | 120        |
| D. Condensation Polymers.....                             | 121        |
| 1. Acetal Copolymer.....                                  | 121        |
| 2. Epoxies.....   | 122        |
| 3. Urea-Formaldehyde (UF) Resins.....                     | 122        |
| III. Postpolymerization Reactions.....                    | 125        |
| A. Reactions of Polysaccharides.....                      | 125        |
| 1. Cellulose Derivations.....                             | 125        |
| 2. Starch and Dextrins.....                               | 126        |
| B. Cross-Linking.....                                     | 127        |
| 1. Unsaturated Polyesters.....                            | 127        |
| 2. Vulcanization.....                                     | 130        |
| D. Block and Graft Copolymer Formation.....               | 133        |
| 1. Block Copolymerization.....                            | 133        |
| 2. Graft Copolymerization.....                            | 135        |
| E. Surface Modification.....                              | 137        |
| IV. Functional Polymers.....                              | 140        |
| A. Polyurethanes.....                                     | 141        |
| B. Polymer-Bound Stabilizers.....                         | 143        |
| 1. Antioxidants.....                                      | 143        |
| 2. Flame Retardants.....                                  | 143        |
| 3. Ultraviolet Stabilizers.....                           | 147        |
| C. Polymers in Drug Administration.....                   | 151        |
| 1. Controlled Drug Release, Degradable Polymers.....      | 152        |
| 2. Site-Directed (Targeted) Drug Delivery.....            | 153        |
| V. Problems.....  | 154        |
| References.....   | 158        |

## PART II: POLYMER PREPARATION AND PROCESSING METHODS

|   |            |
|---|------------|
| <b>Chapter Six</b>  |            |
| <b>Condensation (Step-Reaction) Polymerization.....</b>               | <b>161</b> |
| I. Introduction.....  | 161        |
| II. Mechanism of Condensation Polymerization.....                     | 161        |
| III. Kinetics of Condensation Polymerization.....                     | 162        |
| IV. Stoichiometry in Linear Systems.....                              | 164        |
| V. Molecular Weight Control.....                                      | 169        |
| VI. Molecular Weight Distribution in Linear Condensation Systems..... | 170        |
| VII. Molecular Weight Averages.....                                   | 171        |
| VIII. Ring Formation vs. Chain Polymerization.....                    | 174        |
| IX. Three-Dimensional Network Step-Reaction Polymers.....             | 175        |

|  |     |
|--|-----|
| X. Prediction of the Gel Point.....          | 175 |
| XI. Morphology of Cross-Linked Polymers..... | 178 |
| XII. Problems.....                           | 178 |
| References.....                              | 179 |

## Chapter Seven

|   |            |
|---|------------|
| <b>Chain-Reaction (Addition) Polymerization.....</b>          | <b>181</b> |
| I. Introduction.....  | 181        |
| II. Vinyl Monomers.....                                       | 181        |
| III. Mechanism of Chain Polymerization.....                   | 181        |
| A. Initiation.....  | 181        |
| 1. Generation of Free Radicals.....                           | 182        |
| B. Propagation.....   | 183        |
| C. Termination.....   | 184        |
| D. Chain Transfer.....  | 184        |
| IV. Steady-State Kinetics of Free-Radical Polymerization..... | 185        |
| A. Initiation.....  | 186        |
| B. Propagation.....   | 186        |
| C. Termination.....   | 186        |
| V. Autoacceleration (Trommsdorff Effect).....                 | 189        |
| VI. Kinetic Chain Length.....                                 | 190        |
| VII. Chain-Transfer Reactions.....                            | 192        |
| A. Transfer to Undiluted Monomer.....                         | 194        |
| B. Transfer to Solvent.....                                   | 194        |
| VIII. Temperature Dependence of Degree of Polymerization..... | 195        |
| IX. Ionic and Coordination Chain Polymerization.....          | 196        |
| A. Nonradical Chain Polymerization.....                       | 196        |
| B. Cationic Polymerization.....                               | 197        |
| 1. Mechanism.....   | 197        |
| 2. Kinetics.....  | 198        |
| C. Anionic Polymerization.....                                | 199        |
| 1. Mechanism.....   | 200        |
| 2. Kinetics.....  | 201        |
| D. Living Polymers.....                                       | 202        |
| E. Coordination Polymerization.....                           | 204        |
| 1. Mechanisms.....  | 204        |
| X. Problems.....  | 207        |
| References.....   | 209        |

## Chapter Eight

|   |            |
|---|------------|
| <b>Copolymerization.....</b>                                | <b>211</b> |
| I. Introduction.....  | 211        |
| II. The Copolymer Equation.....                             | 211        |
| III. Types of Copolymerization.....                         | 212        |
| A. Ideal Copolymerization ( $r_1 r_2 = 1$ ).....            | 213        |
| B. Alternating Copolymerization ( $r_1 = r_2 = 0$ ).....    | 213        |
| C. Block Copolymerization ( $r_1 > 1, r_2 > 1$ ).....       | 214        |
| IV. Polymer Composition Variation with Feed Conversion..... | 214        |
| V. Chemistry of Copolymerization.....                       | 219        |
| A. Monomer Reactivity.....                                  | 219        |
| B. Radical Reactivity.....                                  | 220        |
| C. Steric Effects.....                                      | 220        |
| D. Alternation-Polar Effects.....                           | 221        |
| VI. The Q-e Scheme.....                                     | 222        |

|                    |     |
|--------------------|-----|
| VII. Problems..... | 224 |
| References.....    | 225 |

## Chapter Nine

|   |            |
|---|------------|
| <b>Polymer Additives and Reinforcements.....</b>    | <b>227</b> |
| I. Introduction.....                                | 227        |
| II. Plasticizers.....                               | 227        |
| III. Fillers and Reinforcements (Composites).....   | 229        |
| IV. Alloys and Blends.....                          | 234        |
| V. Antioxidants and Thermal and UV Stabilizers..... | 237        |
| A. Polymer Stability.....                           | 237        |
| 1. Nonchain-Scission Reactions.....                 | 238        |
| 2. Chain-Scission Reactions.....                    | 238        |
| 3. Oxidative Degradation.....                       | 238        |
| 4. Hydrolysis and Chemical Degradation.....         | 239        |
| B. Polymer Stabilizers.....                         | 239        |
| VI. Flame Retardants.....                           | 240        |
| VII. Colorants.....                                 | 243        |
| VIII. Antistatic Agents (Antistats).....            | 246        |
| IX. Problems.....                                   | 247        |
| References.....                                     | 248        |

## Chapter Ten

|  |            |
|--|------------|
| <b>Polymer Reaction Engineering.....</b>           | <b>249</b> |
| I. Introduction.....                               | 249        |
| II. Polymerization Processes.....                  | 249        |
| A. Homogeneous Systems.....                        | 249        |
| 1. Bulk (Mass) Polymerization.....                 | 249        |
| B. Solution Polymerization.....                    | 252        |
| C. Heterogeneous Polymerization.....               | 253        |
| 1. Suspension Polymerization.....                  | 253        |
| 2. Emulsion Polymerization.....                    | 258        |
| 3. Precipitation Polymerization.....               | 268        |
| 4. Interfacial and Solution Polycondensations..... | 268        |
| III. Polymerization Reactors.....                  | 269        |
| A. Batch Reactors.....                             | 271        |
| B. Tubular (Plug Flow) Reactor.....                | 274        |
| C. Continuous Stirred Tank Reactor (CSTR).....     | 276        |
| IV. Problems.....                                  | 278        |
| References.....                                    | 280        |

## Chapter Eleven

|   |            |
|---|------------|
| <b>Unit Operations in Polymer Processing.....</b> | <b>281</b> |
| I. Introduction.....                              | 281        |
| II. Extrusion.....                                | 281        |
| A. The Extruder.....                              | 281        |
| B. Extrusion Processes.....                       | 286        |
| III. Injection Molding.....                       | 286        |
| A. The Injection Unit.....                        | 286        |
| B. The Plasticizing Screw.....                    | 290        |
| C. The Heating Cylinder.....                      | 291        |
| D. The Clamp Unit.....                            | 293        |
| E. Auxiliary Systems.....                         | 294        |
| F. The Injection Mold.....                        | 294        |

|   |     |
|---|-----|
| IV. Blow Molding .....                      | 298 |
| A. Process Description .....                | 298 |
| B. Extrusion Blow Molding .....             | 298 |
| C. Injection Blow Molding .....             | 299 |
| V. Rotational Molding .....                 | 299 |
| A. Process Description .....                | 299 |
| B. Process Variables .....                  | 299 |
| VI. Thermoforming .....                     | 300 |
| A. Process Description .....                | 300 |
| 1. Vacuum Forming .....                     | 300 |
| 2. Mechanical Forming .....                 | 301 |
| 3. Air Blowing Process .....                | 301 |
| B. Process Variables .....                  | 303 |
| VII. Compression and Transfer Molding ..... | 303 |
| A. Compression Molding .....                | 303 |
| B. Transfer Molding .....                   | 304 |
| VIII. Casting .....                         | 305 |
| A. Process Description .....                | 305 |
| B. Casting Processes .....                  | 305 |
| 1. Casting of Acrylics .....                | 305 |
| 2. Casting of Nylon .....                   | 306 |
| IX. Problems .....                          | 306 |
| References .....                            | 307 |

### PART III: PROPERTIES AND APPLICATIONS

#### Chapter Twelve

|   |            |
|---|------------|
| <b>Solution Properties of Polymers.....</b>                       | <b>309</b> |
| I. Introduction .....   | 309        |
| II. Solubility Parameter (Cohesive Energy Density) .....          | 309        |
| III. Conformations of Polymer Chains on Solution .....            | 312        |
| A. End-to-End Dimensions .....                                    | 312        |
| B. The Freely Jointed Chain .....                                 | 313        |
| C. Real Polymer Chains .....                                      | 315        |
| 1. Fixed Bond Angle (Freely Rotating) .....                       | 315        |
| 2. Fixed Bond Angles (Restricted Rotation) .....                  | 315        |
| 3. Long-Range Interactions .....                                  | 316        |
| IV. Thermodynamics of Polymer Solutions .....                     | 318        |
| A. Ideal Solution .....   | 318        |
| B. Liquid Lattice Theory (Flory-Huggins Theory) .....             | 319        |
| 1. Entropy of Mixing .....  | 319        |
| 2. Heat and Free Energy of Mixing .....                           | 320        |
| C. Dilute Polymer Solutions (Flory-Krigbaum Theory) .....         | 322        |
| D. Osmotic Pressure of Polymer Solutions .....                    | 323        |
| V. Solution Viscosity .....                                       | 329        |
| A. Newton's Law of Viscosity .....                                | 329        |
| B. Parameters for Characterizing Polymer Solution Viscosity ..... | 331        |
| C. Molecular Size and Intrinsic Viscosity .....                   | 333        |
| D. Molecular Weight from Intrinsic Viscosity .....                | 334        |
| VI. Problems .....  | 339        |
| References .....  | 341        |

## Chapter Thirteen

|  |            |
|--|------------|
| <b>Mechanical Properties of Polymers .....</b>                                     | <b>343</b> |
| I. Introduction .....  | 343        |
| II. Mechanical Tests .....   | 343        |
| A. Stress–Strain Experiments .....   | 344        |
| B. Creep Experiments .....   | 344        |
| C. Stress Relaxation Experiments .....   | 346        |
| D. Dynamic Mechanical Experiments .....  | 347        |
| E. Impact Experiments .....  | 348        |
| III. Stress–Strain Behavior of Polymers .....                                      | 350        |
| A. Elastic Stress–Strain Relations .....   | 351        |
| IV. Deformation of Solid Polymers .....  | 355        |
| V. Compression vs. Tensile Tests .....   | 359        |
| VI. Effects of Structural and Environmental Factors on Mechanical Properties ..... | 362        |
| A. Effect of Molecular Weight .....  | 362        |
| B. Effect of Cross-Linking .....   | 363        |
| C. Effect of Crystallinity .....   | 364        |
| D. Effect of Copolymerization .....  | 364        |
| E. Effect of Plasticizers .....  | 366        |
| F. Effect of Polarity .....  | 367        |
| G. Steric Factors .....  | 369        |
| H. Effect of Temperature .....   | 370        |
| I. Effect of Strain Rate .....   | 371        |
| J. Effect of Pressure .....  | 375        |
| VII. Polymer Fracture Behaviour .....  | 376        |
| A. Brittle Fracture .....  | 376        |
| B. Linear Elastic Fracture Mechanics (LEFM) .....                                  | 379        |
| VIII. Problems .....   | 383        |
| References .....   | 387        |

## Chapter Fourteen

|  |            |
|--|------------|
| <b>Polymer Viscoelasticity .....</b>                         | <b>389</b> |
| I. Introduction .....  | 389        |
| II. Simple Rheological Responses .....                       | 389        |
| A. The Ideal Elastic Response .....                          | 389        |
| B. Pure Viscous Flow .....                                   | 390        |
| C. Rubberlike Elastic .....                                  | 391        |
| III. Viscoelasticity .....                                   | 391        |
| IV. Mechanical Models for Linear Viscoelastic Response ..... | 392        |
| A. Maxwell Model .....                                       | 392        |
| 1. Creep Experiment .....                                    | 393        |
| 2. Stress Relaxation Experiment .....                        | 393        |
| 3. Dynamic Experiment .....                                  | 395        |
| B. The Voigt Element .....                                   | 396        |
| 1. Creep Experiment .....                                    | 397        |
| 2. Stress Relaxation Experiment .....                        | 398        |
| 3. Dynamic Experiment .....                                  | 398        |
| C. The Four-Parameter Model .....                            | 401        |
| V. Material Response Time — The Deborah Number .....         | 404        |
| VI. Relaxation and Retardation Spectra .....                 | 404        |
| A. Maxwell-Weichert Model (Relaxation) .....                 | 404        |
| B. Voigt-Kelvin (Creep) Model .....                          | 405        |
| VII. Superposition Principles .....                          | 407        |
| A. Boltzmann Superposition Principle .....                   | 407        |
| B. Time-Temperature Superposition Principle .....            | 408        |

|                   |     |
|-------------------|-----|
| IX. Problems..... | 410 |
| References .....  | 411 |

## Chapter Fifteen

|   |            |
|---|------------|
| <b>Polymer Properties and Applications .....</b>              | <b>413</b> |
| I. Introduction.....  | 413        |
| II. The Structure of the Polymer Industry .....               | 413        |
| A. Polymer Materials Manufacturers.....                       | 413        |
| B. Manufacturers of Chemicals, Additives, and Modifiers.....  | 414        |
| C. Compounding/Formulating .....                              | 414        |
| D. The Processor.....   | 414        |
| E. The Fabricator .....                                       | 414        |
| F. The Finisher .....   | 414        |
| III. Raw Materials for the Polymer Industry.....              | 415        |
| IV. Polymer Properties and Applications .....                 | 415        |
| A. Polyethylene .....   | 416        |
| B. Polypropylene (PP) .....                                   | 421        |
| C. Polystyrene .....  | 423        |
| D. Poly(Vinyl Chloride) (PVC) .....                           | 426        |
| V. Other Vinyl Polymers .....                                 | 428        |
| A. Poly(Vinyl Acetate) PVAC) .....                            | 428        |
| B. Poly(Vinyl Alcohol) (PVAL).....                            | 428        |
| VI. Acrylics .....  | 430        |
| A. Poly(Methyl Methacrylate) (PMMA).....                      | 430        |
| B. Polyacrylates.....   | 431        |
| C. Polyacrylonitrile (PAN)—Acrylic Fibers .....               | 432        |
| VII. Engineering Polymers.....                                | 432        |
| A. Acrylonitrile-Butadiene-Styrene (ABS).....                 | 433        |
| B. Polyacetal (Polyoxymethylene — POM) .....                  | 434        |
| C. Polyamides (Nylons).....                                   | 434        |
| D. Polycarbonate (PC).....                                    | 438        |
| E. Poly(Phenylene Oxide (PPO).....                            | 439        |
| F. Poly(Phenylene Sulfide) (PPS).....                         | 440        |
| G. Polysulfones.....  | 440        |
| H. Polyimides.....  | 442        |
| I. Engineering Polyesters .....                               | 443        |
| J. Fluoropolymers .....                                       | 445        |
| K. Ionomers.....  | 446        |
| VIII. Elastomers.....   | 447        |
| A. Diene-Based Elastomers.....                                | 447        |
| 1. Polybutadiene (Butadiene Rubber, BR).....                  | 449        |
| 2. Styrene-Butadiene Rubber (SBR).....                        | 449        |
| 3. Acrylonitrile-Butadiene Rubber (Nitrile Rubber, NBR) ..... | 450        |
| 4. Polyisoprene .....   | 450        |
| 5. Polychloroprene (Neoprene) .....                           | 451        |
| 6. Butyl Rubber.....  | 451        |
| B. Ethylene-Propylene Rubbers .....                           | 451        |
| C. Polyurethanes.....   | 452        |
| D. Silicone Elastomers.....                                   | 453        |
| E. Thermoplastic Elastomers (TPE) .....                       | 454        |
| 1. Styrene Block Copolymers (Styrenics) .....                 | 454        |
| 2. Thermoplastic Polyurethane Elastomers (TPUs).....          | 454        |
| 3. Polyolefin Blends .....                                    | 455        |
| 4. Thermoplastic Copolyesters (COPE).....                     | 455        |
| 5. Thermoplastic Polyamides .....                             | 456        |

|  |     |
|--|-----|
| IX. Thermosets .....                           | 457 |
| A. Phenolic Resins .....                       | 457 |
| B. Amino Resins .....                          | 459 |
| C. Epoxy Resins .....                          | 460 |
| D. Network Polyester Resins .....              | 461 |
