Preface	viii
Chapter 1 Metal Forming Processes in Manufacturing	1
1.1 Classification of Manufacturing Processes	1
1.2 Characteristics of Manufacturing Processes	2
1.3 Metal Forming Processes in Manufacturing	4
Chapter 2 Forging Processes: Variables and Descriptions	7
2.1 Introduction	7
2.2 Forging Operation as a System	7
2.3 Types of Forging Processes	9
Chapter 3 Plastic Deformation: Strain and Strain Rate	17
3.1 Introduction	17
3.2 Stress Tensor	17
3.3 Properties of the Stress Tensor	18
3.4 Plane Stress or Biaxial Stress Condition	19
3.5 Local Deformations and the Velocity Field	20
3.6 Strains	20
3.7 Velocities and Strain Rates	21
3.8 Homogeneous Deformation	21
3.9 Plastic (True) Strain and Engineering Strain	23
Chapter 4 Flow Stress and Forgeability	25
4.1 Introduction	25
4.2 Tensile Test	27
4.3 Compression Test	29
4.4 Ring Test	35
4.5 Torsion Test	36
4.6 Representation of Flow Stress Data	36

Appendices (CD-ROM only)

- 4.1 Determination of Flow Stress by Compression Test at Room Temperature
- 4.2 Determination of Flow Stress at High Temperature
- 4.3 Forgeability and Damage Factor in Cold Forging

Chapter 5	Plastic Deformation: Complex State of Stress and Flow Rules	51
5.1	State of Stress	51
5.2	Yield Criteria	52
5.3	Flow Rules	55
5.4	Power and Energy of Deformation	56
5.5	Effective Strain and Effective Strain Rate	57

Chapter 6	Temperatures and Heat Transfer	59
6.1	Introduction	59
6.2	Heat Generation and Heat Transfer in Metal Forming Processes	59
6.3	Temperatures in Forging Operations	60
6.4	Measurement of Temperatures at the Die/Material Interface	60
6.5	Measurement of Interface Heat Transfer Coefficient	62
6.6	Influence of Press Speed and Contact Time on Heat Transfer	64

Appendices (CD-ROM only) 6.1 Upset Forging of Cylinders
--

Chapter 7	Friction and Lubrication	67
7.1	Introduction	67
7.2	Lubrication Mechanisms in Metal Forming	68
7.3	Friction Laws and Their Validity in Forging	69
7.4	Parameters Influencing Friction and Lubrication	69
7.5	Characteristics of Lubricants Used	70
7.6	Lubrication Systems for Cold Forging	70
7.7	Lubrication Systems for Warm and Hot Forging	73
7.8	Methods for Evaluation of Lubricants	74

Appendices (CD-ROM only) 7.1 Ring Compression Test 7.2 Double Cup Extrusion Test
--

Chapter 8	Inverse Analysis for Simultaneous Determination of Flow Stress and Friction	83
8.1	Introduction	83
8.2	Inverse Analysis in Metal Forming	83
8.3	Flow Stress Determination in Forging by Inverse Analysis	85
8.4	Inverse Analysis for Simultaneous Determination of Flow Stress and Friction	86
8.5	Example of Inverse Analysis	86

Chapter 9	Methods of Analysis for Forging Operations	91
9.1	Introduction	91
9.2	Slab Method of Analysis	93
9.3	Upper Bound Method and Its Application to Axisymmetric Upsetting	97
9.4	Finite Element Method in Metal Forming	98

Chapter 10	Principles of Forging Machines	107
10.1	Introduction	107
10.2	Interaction between Process Requirements and Forging Machines	107

10.3	Load and Energy Requirements in Forming	108
10.4	Classification and Characteristics of Forming Machines	110
10.5	Characteristic Data for Load and Energy	111
10.6	Time-Dependent Characteristic Data	112
10.7	Characteristic Data for Accuracy	112
Chapter 11	Presses and Hammers for Cold and Hot Forging	115
11.1	Introduction	115
11.2	Hydraulic Presses	115
11.3	Screw Presses	131
11.4	Hammers	135
Chapter 12	Special Machines for Forging	141
12.1	Introduction	141
12.2	Transverse or Cross-Rolling Machines	142
12.3	Electric Upsetters	142
12.4	Ring-Rolling Mills	143
12.5	Horizontal Forging Machines or Upsetters	144
12.6	Rotary or Orbital Forging Machines	145
12.7	Radial Forging Machines	145
Chapter 13	Billet Separation and Shearing	151
13.1	Introduction	151
13.2	Billet and Sheared Surface Quality	151
13.3	Shearing Force, Work, and Power	154
13.4	Shearing Equipment	154
Chapter 14	Process Design in Impression Die Forging	159
14.1	Introduction	159
14.2	Forging Process Variables	160
14.3	Shape Complexity in Forging	164
14.4	Design of Finisher Dies	165
14.5	Prediction of Forging Stresses and Loads	169
14.6	Design of Blocker (Preform) Dies	171
Appendix A	Example of Load for Forging of a Connecting Rod	177
A.1	Introduction	177
A.2	Estimation of the Flow Stress	178
A.3	Estimation of the Friction Factor	181
A.4	Estimation of the Forging Load	181
A.5	Comparison of Predictions with Data from Actual Forging Trials	181

Appendices (CD-ROM only)

14.1 Preform Design in Closed Die Forging

14.2 Flash Design in Closed Die Forging

Chapter 15	A Simplified Method to Estimate Forging Load in Impression-Die Forging	185
15.1	Introduction	185
15.2	Effect of Process Parameters on Forging Load	185
15.3	Methods for Load Estimation	186
15.4	Simplified Method for Load Estimation	190
15.5	Example of Load Estimation	191

Appendices (CD-ROM only)

- 15.1 ForgePAL: A Computer Program for Estimating Forces in Hot Forging with Flash

Chapter 16	Process Modeling in Impression-Die Forging Using Finite-Element Analysis	193
16.1	Introduction	193
16.2	Information Flow in Process Modeling	194
16.3	Process Modeling Input	194
16.4	Characteristics of the Simulation Code	196
16.5	Process Modeling Output	197
16.6	Examples of Modeling Applications	200
Chapter 17	Cold and Warm Forging	211
17.1	Introduction	211
17.2	Cold Forging as a System	213
17.3	Materials for Cold Forging	213
17.4	Billet Preparation and Lubrication in Cold Forging of Steel and Aluminum	214
17.5	Upsetting	215
17.6	Load Estimation for Flashless Closed-Die Upsetting	216
17.7	Extrusion	218
17.8	Estimation of Friction and Flow Stress	221
17.9	Prediction of Extrusion Loads from Selected Formulas	222
17.10	Prediction of Extrusion Loads from Model Test	224
17.11	Tooling for Cold Forging	225
17.12	Punch Design for Cold Forging	227
17.13	Die Design and Shrink Fit	228
17.14	Process Sequence Design	229
17.15	Parameters Affecting Tool Life	230
17.16	Warm Forging	233

Appendices (CD-ROM only)

- 17.1 Examples of Forging Sequences
- 17.2 Forward Rod Extrusion
- 17.3 Backward Rod Extrusion

Chapter 18	Process Modeling in Cold Forging Using Finite-Element Analysis	237
18.1	Introduction	237
18.2	Process Modeling Input	237
18.3	Process Modeling Output	239
18.4	Process Modeling Examples	239
Chapter 19	Microstructure Modeling in Superalloy Forging	247
19.1	Introduction	247
19.2	Experiments for Microstructure Model Development	247
19.3	Microstructure Model Formulation	248
19.4	Prediction of Microstructure in Superalloy Forging	254
19.5	Nomenclature of Microstructure Model	254

Chapter 20 Isothermal and Hot Die Forging	257
20.1 Introduction	257
20.2 Isothermal Forging	257
20.3 Hot-Die Forging	258
20.4 Benefits of Isothermal and Hot-Die Forging	258
20.5 High-Temperature Materials for Isothermal and Hot-Die Forging	259
20.6 Equipment and Tooling	263
20.7 Postforging Heat Treatment	269
20.8 Production of Isothermal/Hot-Die Forging	271
20.9 Economic Benefits of Isothermal and Hot-Die Forging	272
20.10 Summary	273
Chapter 21 Die Materials and Die Manufacturing	277
21.1 Introduction	277
21.2 Die and Tool Materials For Hot Forging	277
21.3 Heat Treatment	285
21.4 Die and Tool Materials for Cold Forging	285
21.5 Die Manufacture	289
21.6 Surface Treatments	292
Chapter 22 Die Failures in Cold and Hot Forging	295
22.1 Introduction	295
22.2 Classification of Die Failures	295
22.3 Fracture Mechanisms	296
22.4 Wear Mechanisms	296
22.5 Analytical Wear Models	297
22.6 Parameters Influencing Die Failure	297
22.7 Prediction of Die Fatigue Fracture and Enhancement of Die Life in Cold Forging Using Finite-Element Modeling (FEM)	307
22.8 Prediction of Die Wear and Enhancement of Die Life Using FEM	311
Chapter 23 Near-Net Shape Forging and New Developments	319
23.1 Introduction	319
23.2 Tolerances in Precision Forging	319
23.3 Advances in Tool Design	323
23.4 Advances in Forging Machines	326
23.5 Innovative Forging Processes	328
23.6 Future of Forging Technology in the Global Marketplace	331
Index	337
