

Catalyse homogène par les complexes des métaux de transition

J.M. BRÉGEAULT

Préface de Y. CHAUVIN

MASSON 

CONTENTS

1. INTRODUCTION. BASIC PRINCIPLES.....	1
1.1. Historical Development	3
1.2. Conventions and Models for Organometallic Complexes	4
1.3. Principal Reaction Types of Organometallic Compounds	10
1.4. Metal Carbonyls and Olefin Complexes	30
1.5. Effects of Trivalent Phosphorus Ligands	38
1.6. Basic Knowledge for Heterolytic Catalytic Reactions. The 16/18 Valence Electron Rule	41
2. ACTIVATION OF ALKENES, ALKYNES AND/OR CARBON MONOXIDE.....	47
2.1. Alkene Isomerization	49
2.2. Alkene Hydrogenation	60
2.3. Hydrocyanation of Alkenes and Alkynes	88
2.4. Alkene Hydrosilation.....	94
2.5. Anti-Markovnikov Alkene Hydration	97
2.6. Olefin Dimerization and Oligomerization	99
2.7. Alkene and Alkyne Metathesis	128
2.8. Hydroformylation (Oxo Reactions)	158
2.9. Methanol Carbonylation : Industrial Synthesis of Acetic Acid	176
3. DIOXYGEN ACTIVATION. OXIDATION AND HIGH OXIDATION - STATE COMPLEXES (PEROXO AND ALKYLPEROXO COMPLEXES)	191
3.1. Dioxygen and Main Oxygen-Containing Oxidants. Homolytic Oxidation.....	193
3.2. Heterolytic Oxidation : Transition-Metal Catalyzed Epoxidation.....	217
3.3. Olefin Oxidation to Aldehydes or Ketones. The Wacker Process and Derived Systems.....	245
