Contents

Introduction	1
Tool Steels as Special Alloys	1
Historical Evolution of Iron and Steel	2
Tool Steel History	3
Summary	6
Classification and Selection of Tool Steels	7
Classification of Tool Steels	7
Selection of Tool Steels	15
Predicting the Performance of Tool Steels	15
Performance Selection Factors	19
Manufacturing Limitations	21
Examples of Tool Steel Selection	21
Selection of Steels for Cold-Heading Dies	22
Selection of Steels for Coining Dies	22
Selection of Steels for Cold-Work Dies and Punches	22
Selection of Tool Steels for Cold Forming Hexagon Nuts	23
Selection of Steels for Cold Extrusion	25
Selection of Steels for Shears	25
Selection of Steels for Die-Forging and Press-Forging Tools	26
Selection of Steel for Additional Uses	27
Manufacture of Tool Steels	29
Primary Melting	29
Electroslag Remelting	30
Primary Breakdown	33
Rolling	33
Hot and Cold Drawing	34
Continuous Casting	34
Powder Metallurgy	37
Osprey Process	40
Tool Steel Alloy Design	45
Phases and Phase Diagrams: General Considerations	45
Determination of Equilibrium Phase Diagrams	46
The Iron-Carbon Phase Diagram: Ferrite, Austenite, and Cementite	47
Alloying Elements: Effects on Ferrite and Austenite Stability	49
Martensite	50
Alloy Carbides and Tool Steel Alloy Design	55
Principles of Tool Steel Heat Treatment	67
Normalizing	69
Stress-Relief Heat Treatments	69
Annealing	72
Hardening: Introductory Considerations	73
Austenitizing for Hardening	74
Austenite Composition, M_s Temperatures, and Retained Austenite	79
Austenite Grain Size and Grain Growth	81
Hardness and Hardenability	82
Diffusion-Controlled Phase Transformations of Austenite	87
Transformation Diagrams, Jominy Curves, and Hardenability:	
General Considerations	89
Transformation Diagrams, Jominy Curves, and Hardenability: Tool Steels	90
Martensite Transformation Kinetics and Stabilization	96
Tempering	97
Practical Aspects of Tool Steel Heat Treatment	109
Salt Bath Furnaces	109

Controlled-Atmosphere Furnaces	114
Vacuum Furnaces	114
Fluidized-Bed Furnaces.....	120
Water-Hardening Tool Steels	125
General Processing and Performance Considerations	125
Hardening and Microstructure of Water-Hardening Tool Steels.....	127
Hardenability of Water-Hardening Tool Steels	129
Tempering of Water-Hardening Tool Steels	130
Low-Alloy Special-Purpose Tool Steels	141
Low-Alloy Chromium Tool Steels with High Carbon Content	141
Low-Alloy Chromium Tool Steels with Medium Carbon Content.....	148
Low-Alloy Chromium Tool Steels Containing Nickel	150
Shock-Resisting Tool Steels	165
Alloying Effects of Silicon	165
Shock-Resisting Steels Containing Tungsten.....	166
Shock-Resisting Tool Steels without Tungsten	169
Oil-Hardening Cold-Work Tool Steels	181
Microstructures.....	181
Processing Prior to Hardening	182
Hardenability and Hardening.....	183
Tempering.....	184
Selection and Applications	186
Air-Hardening, Cold-Work Tool Steels.....	193
Microstructures.....	195
Processing Prior to Hardening	195
Hardenability and Hardening.....	195
Tempering.....	197
High-Carbon, High-Chromium, Cold-Work Tool Steels	203
Microstructure.....	203
Processing Prior to Hardening	204
Hardenability and Hardening.....	205
Tempering.....	209
Selection and Applications	216
Hot-Work Tool Steels	219
Chromium Hot-Work Steels.....	222
Tungsten Hot-Work Steels	234
Molybdenum Hot-Work Steel	240
High Speed Steels	251
Solidification of High-Speed Steels	253
Hot Work and Annealing.....	257
Austenitizing for Hardening of High-Speed Steels	259
Grain Size Control during Austenitizing	262
Cooling Transformations and Hardening.....	264
Tempering and Hardness of High-Speed Steels	269
Other Property Changes in Tempered High-Speed Steels.....	275
Summary: Alloying Elements in High-Speed Steels.....	282
High-Speed Tool Steel Applications	284
Single-Point Cutting Tools	284
Multipoint Cutting Tools	287
Factors in Selecting High-Speed Tool Steels	289
Mold Steels.....	291
Hubbing Grades	292
Machined Cavity Grades	295
Corrosion-Resistant Mold Steels	296
Forging, Annealing, and Stress Relieving	298
Carburizing, Hardening, and Tempering	298
Selection and Applications of Mold Steels	300

Surface Modification of Tool Steel	305
Oxide Coatings	306
Nitriding	306
Ion Implantation	309
Chemical and Physical Vapor Deposition Processing	310
CVD and PVD Coating Structure and Performance	313
Salt Bath Coating.....	316
Laser and Electron Beam Surface Modification	317
Boride Coatings	320
Troubleshooting: Manufacturing and Performance Problems	325
Fracture and Toughness of Tool Steels: General Considerations.....	325
Steel Quality and Primary Processing	327
Mechanical Design	328
Heat Treatment Problems	329
Grinding and Finishing of Hardened Tools	338
Distortion and Dimensional Change.....	338
Index	345
