Contents

INTRODUCTION xi

1. HISTORY OF ZINC PLATING 1

Early additives for acid zinc plating 4
Development of bright cyanide zinc plating 5
Mid and low cyanide zinc plating 11
Alkaline non-cyanide zinc plating 13
Bright acid zinc plating 13
Other zinc plating systems 15
Zinc fluoborate solutions 17
The future of zinc plating 19

References 19

2. CLEANING AND PREPLATE TREATMENTS 21

Types of soils encountered 22
Soil removal 23
Alkaline soak cleaning 23
Installation and operation of alkaline soak cleaners 25
Mechanism of alkaline soak cleaning 26
Formulation of alkaline soak cleaners 28
Electrolytic cleaning 31
Installation of electrocleaners 31
Periodic reverse electrocleaning 33
Operation of electrocleaners 33
Formulation of alkaline electrocleaners 34
Alkaline descaling or derusting 35
Evaluation of cleaners 36
Life of an alkaline cleaner 36
Acid pickling 37
Inhibitors and pickling additives 39
Acid cleaning and pickling 40
Electrolytic pickling 40
Rinsing 40

References 42

3. PROCESSING CYCLES AND PLANT LAYOUTS FOR ZINC PLATING 44

Barrel zinc plating 44
Equipment for barrel zinc plating 46
Processing cycles and plant layouts for zinc plating 47
Basic processing cycle 48
Horizontal barrel processing cycles 49
Oblique barrels processing cycles 52
Rack plating cycles 56

References 60

4. CYANIDE ZINC PLATING 61

Bright cyanide zinc baths 61
Chemistry of the cyanide zinc system 63
Typical bath formulations for cyanide zinc plating 64
Preparation of cyanide zinc bath 65
Other bright cyanide zinc formulations 67
Cyanide solutions for plating of electrical conduit 67
Ductile zinc bath 68
Low embrittlement formulation 68
The mid, dilute or half-strength cyanide bath 68
Operating conditions of standard cyanide and mid-cyanide zinc solutions 70
Addition agents or brighteners for cyanide zinc plating 76
Wetting agents 81
Low cyanide-low metal, zinc plating baths 83
Low cyanide zinc baths 83
Advantages of the low cyanide zinc system 83
Operating conditions of low cyanide baths 84
Conversion of standard cyanide baths to low cyanide 86
Makeup of a new low cyanide zinc bath 87
Preplate and postplate treatment 88

References 89

5. ZINCATE OR ALKALINE NON-CYANIDE ZINC PLATING 90

Makeup of zincate alkaline non-cyanide baths 93
Typical operating conditions of zincate electrolytes 96
Preplate treatment 101
Postplate treatments 102
Conversion of existing cyanide zinc baths to zincate electrolytes 102
Conversion from one non-cyanide system to another 104
Addition agents for alkaline non-cyanide zinc 104

References 105

6. ACID ZINC PLATING 107

Dull acid zinc baths 108
Bright acid chloride zinc baths 112
Ammonium chloride bright acid zinc baths 116
Makeup of ammonium chloride baths 121
Functions of components in ammonium chloride bright acid zinc baths 123
Potassium chloride bright acid baths 128
Operating conditions for potassium chloride baths 130
Control of the bath 131
Makeup of potassium chloride baths 132
Functions of the components in potassium chloride bright acid zinc baths 133
Sodium chloride bright acid zinc baths 135
Mixed potassium chloride-ammonium chloride bright acid zinc baths 136

References 138

7. POST-PLATE TREATMENTS FOR ZINC PLATE 139

Nitric acid bright dips 140
Chromate conversion coatings 141
History of chromate conversion coatings 142
Types of chromate conversion coatings 144
Physical characteristics of chromate conversion coatings 145
Composition of chromate conversion coatings 147
Trivalent chromium conversion coatings 151
Maintenance and control of chromate conversion coatings 152
Chromating in automatic equipment 153
Dyeing of chromate coatings 154
Molybdate dips or non-chromate chromates 155
Testing for the presence of chromate coatings 156
Testing chromate coatings for adherence and abrasion resistance 157
Corrosion testing of chromate conversion coatings 158
Water soluble resins and lacquers 160
Mechanical properties of water soluble resin coatings 161
Electrical properties and solderability 161
Methods of application 161

References 162

8. PRACTICAL PROBLEMS, TREATMENT PROCEDURES AND TROUBLESHOOTING IN BRIGHT ZINC PLATING 163

General troubleshooting procedures 164
Preventing problems before they happen 169
Impurities in bright zinc plating baths 173
Treatment procedures for bright zinc baths 180
Troubleshooting chart for standard cyanide and mid and low cyanide bright zinc baths 191

Troubleshooting chart for alkaline non-cyanide bright zinc plating baths 194
Troubleshooting chart for bright acid chloride zinc baths 196
Bright zinc plating of high-carbon and carbonitrided steel parts 202

References 206

9. MECHANICAL PLATING OF ZINC 207

Essential characteristics of mechanical zinc plating 208
Comparison of mechanical zinc plating to bright zinc electroplating 210
Media for mechanical plating 213
Post-plate treatments 214

References 214

10. CONTINUOUS ZINC PLATING OF STEEL STRIP AND WIRE 215

History and development of the electrogalvanizing process 215
Recent developments in continuous strip plating 219
Plating equipment for strip and wire plating 221
Bright acid zinc strip or wire plating baths 225

References 227

11. THE PLATING OF ZINC-NICKEL ALLOYS AND OTHER ZINC ALLOY BATHS 228

Nickel-zinc alloy plating 229
Iron-zinc alloy plating
Cobalt-zinc alloy plating 241
Tin-zinc alloy plating 242
Tin-zinc alloy plating baths 243
White brass plating 245
Zinc-cadmium alloy plating 248
Zinc-graphite composite plating 248

References 250

12. ANALYTICAL CONTROL OF ZINC PLATING BATHS 252

Simple analytical method for cyanide and non-cyanide alkaline zinc plating baths 254
Simple analytical method for acid chloride zinc plating baths 256
Preparation of solutions for zinc plating bath analysis 257
Correcting the chemistry of zinc solutions 259

13. HULL CELL CONTROL OF BRIGHT ZINC PLATING BATHS 265

Procedure for the Hull Cell test for zinc baths 267
The applications of the Hull Cell test in bright zinc plating 272
Use of the Hull Cell to evaluate and compare zinc brighteners 277
Detecting the presence of metallic impurities 280
Determination of covering power in the Hull Cell 287
Determination of throwing power in the Hull Cell 287
Using the Hull Cell to test the effectiveness of treatment procedures 289
Other plating cell tests 292

References 293

14. WASTE DISPOSAL PROCEDURES FOR ZINC PLATING OPERATIONS 294

Minimizing waste production in zinc plating 294
An outline of waste treatment options for zinc plating line effluents 297
Destructive techniques for zinc plating waste disposal 298
Evaporative recovery systems for zinc plating wastes 306
Electrolytic recovery methods 309
Plant design and layouts for zinc effluent waste treatment 310

References 312

15. SAFETY IN THE ZINC PLATING PLANT 314

U.S. federal safety legislation 315
U.K. legislation 316
Chemical hazards in the zinc plating plant
General first aid practice for chemical poisoning 326

References 329
