PREFACE	5
---------	---

<b>CHAPTER 1</b> <i>Basic Concepts of Stereochemistry</i>	<b>13</b>
---	-----------

---

1.1.	The Place of Stereochemistry in Chemistry	13
1.2.	Stereochemical Features of the Carbon Atom	14
1.3.	Bond Characteristics	16
1.4.	Molecular Models	17
1.5.	Conformations (Rotational Isomerism)	27
1.6.	Geometrical Isomerism	34
1.7.	Optical Isomerism (Enantiomerism)	37
1.8.	Polarimetry and Spectropolarimetry	41
1.9.	Projection Formulas	47
1.10.	Racemates	49
1.11.	Diastereoisomerism	52
1.12.	Asymmetry and Chirality	55
1.13.	The Enantiotopic and Diastereotopic Relationships of Atoms and Groups	57
1.14.	The Sign of Rotation and the Configuration	62
1.15.	Nomenclature of Optical Isomers	63
1.16.	The Spatial Structure of Rings	72
1.17.	Geometrical and Optical Isomerism in the Alicyclic Series	74
1.18.	Types of Optically Active Substances	78
1.19.	Stereochemical Specificity of Reactions	81
1.20.	Classical and Modern Stereochemistry	83

---

<i>References</i>	85
-------------------	----

<b>CHAPTER 2</b> <i>Methods of Preparation of Stereoisomers</i>	<b>87</b>
---	-----------

---

2.1.	Introduction	87
2.2.	Resolution of Racemates by Mechanical Separation and Spontaneous Crystallization	89
2.3.	The Behaviour of Enantiomers in Optically Active Solvents	91
2.4.	Resolution by Formation of Diastereomers	92
2.5.	Resolution via Molecular Compounds	103

2.6.	Resolution by Adsorption Methods	106
2.7.	Biochemical Preparation of Optically Active Compounds	109
2.8.	Racemization	110
2.9.	Asymmetric Synthesis and Its Types	113
2.10.	Asymmetric Transformations and Kinetic Resolution	115
2.11.	Creation of an Asymmetric Centre from the Carbonyl Group	120
2.11.1.	Syntheses Based on $\alpha$ -Ketonic Acids	120
2.11.2.	Prelog's Rule	122
2.11.3.	Asymmetric Syntheses Based on Ketones	124
2.11.4.	Cram's Rule	132
2.12.	Addition to the Carbon-Carbon Double Bond	136
2.13.	Cycloaddition Reactions	142
2.14.	Addition to the Carbon-Nitrogen Double Bond	143
2.15.	Elimination Reactions	146
2.16.	Asymmetric Synthesis of Sulphoxides	147
2.17.	Estimation of the Efficiency of Asymmetric Syntheses	148
2.18.	Syntheses with Asymmetric Catalysts	149
2.19.	Absolute Asymmetric Photochemical Synthesis	152
2.20.	Enzymatic Asymmetric Synthesis	154
2.21.	Methods of Determination of Optical Purity	156

---

*References* 163

**CHAPTER 3** *Determination of Spatial Configuration* 169

---

3.1.	Determination of the Configuration of Geometrical Isomers	169
3.2.	Determination of the Configuration of Diastereomers	174
3.3.	Determination of the Configuration of Optical Antipodes	180
3.3.1.	Chemical Correlation of Configurations	181
3.3.2.	Method of Optical Comparison	200
3.3.3.	Determination of Configurations by the Spectropolarimetric Method	207
3.3.4.	The Method of Quasi-Racemates	210
3.3.5.	Nuclear Magnetic Resonance	216
3.3.6.	Stereospecific Asymmetric Synthesis	217

---

*References* 218

**CHAPTER 4** *Stereochemistry of Alkanes and Their Derivatives* 221

---

4.1.	Conformations of Alkanes	222
4.2.	Conformations of Halogenoalkanes	230
4.3.	Conformations of Di- and Polyhalogenoalkanes	236
4.4.	Conformations of Other Substituted Alkanes	241
4.5.	Conformations about Bonds Involving Carbon Atoms in a State of $sp^2$ -Hybridization	248
4.6.	Conformations about Carbon-Heteroatom Bonds	250
4.7.	Configurations and Conformations of Diastereomers	256
4.8.	Stereochemistry of Reactions of Acyclic Compounds	266
4.8.1.	Nucleophilic Substitution Reactions	266
4.8.2.	Electrophilic Substitution Reactions	270
4.8.3.	Reactions Involving Free Radicals	270

---

	4.8.4. Differences in the Reactivity of Diastereomers	273
4.9.	Optical Activity	275
	4.9.1. Basic Conceptions	275
	4.9.2. Chugaev's Rule	278
	4.9.3. Physical Foundations of Optical Rotation	280
	4.9.4. Physical Theories of Optical Rotation	286
	4.9.5. Optical Activity and Conformation	291
	4.9.6. Brewster's Calculation of Optical Rotation	295
	<i>References</i>	302
<b>CHAPTER 5 Stereochemistry of Ring Compounds</b>		<b>306</b>
5.1.	Types of Strain in Rings	306
5.2.	Configurations of Substituted Rings	309
5.3.	Three- to Five-Membered Rings	315
	5.3.1. Conformations	315
	5.3.2. Reactivity	318
5.4.	Cyclohexane	322
	5.4.1. The Ring Conformation	322
	5.4.2. Conformations of Substituted Cyclohexanes	325
	5.4.3. Conformational Energies of Substituents	328
	5.4.4. Di- and Polysubstituted Cyclohexanes	333
	5.4.5. Isolation of Individual Conformers	347
	5.4.6. Reactivity of Cyclohexane Derivatives	348
	5.4.7. Reduction of Ketones of the Cyclohexane Series	352
5.5.	Cycloheptane and Its Derivatives	356
5.6.	Medium Rings	356
5.7.	Large Rings	366
5.8.	Condensed-Ring Systems (Fused-Ring Compounds)	367
	5.8.1. Systems Consisting of Small Rings	367
	5.8.2. Hydrindane	370
	5.8.3. Norbornane (Bicyclo[2.2.1]heptane)	372
	5.8.4. Other Bridged-Ring Structures	377
	5.8.5. Decalin	379
	5.8.6. Hydrogenated Anthracenes	384
	5.8.7. Perhydrophenanthrene	385
5.9.	Inositol and Related Compounds	389
5.10.	Spirans	390
5.11.	Framework (Bridged-Ring) Structures	393
5.12.	The Octant Rule	394
	<i>References</i>	398
<b>CHAPTER 6 Stereochemistry of Compounds with Multiple Carbon-Carbon Bonds</b>		<b>403</b>
6.1.	Physical Properties of Cis-Trans Isomeric Acyclic Olefins and Their Use for Configuration Determinations	403
	6.1.1. Dipole Moments	403
	6.1.2. Infrared and Raman Spectra	405
	6.1.3. Ultraviolet Spectra	406
	6.1.4. Nuclear Magnetic Resonance Spectra	409

6.1.5.	Other Physical Properties	410
6.2.	Stability and Interconversions of Cis-Trans Isomeric Acyclic Olefins	412
6.3.	Preparation of Cis-Trans Isomers	414
6.3.1.	Additions to Triple Bonds	415
6.3.2.	1,2-Elimination Reactions	418
6.3.3.	Syn-Anti Dichotomy in 1,2-Elimination Reactions	426
6.4.	Stereochemistry of Additions to Double Bonds	430
6.4.1.	General	430
6.4.2.	Cis-Addition Reactions	432
6.4.3.	Trans-Addition Reactions	434
6.5.	Steric Direction of Elimination Reactions of Olefins	436
6.6.	Steric Direction of Substitution Reactions at the Olefinic Carbon Atom	437
6.7.	Stereochemistry of Compounds with a Double Bond in the Ring	440
6.7.1.	Ring Conformations	440
6.7.2.	Stereochemistry of Formation of Cycloolefins	443
6.7.3.	Reactions of Cycloolefins	445
6.7.4.	Bredt's Rule	449
6.8.	Stereochemistry of Conjugated Dienes and Their Analogues	452
6.9.	Stereochemistry of Diene Synthesis	458
6.10.	Stereoisomerism of Cyclooctatetraene	463
6.11.	Stereoisomerism of the Cumulenes	464
6.12.	Stereochemistry of the Cycloalkynes	467
6.13.	Optical Activity of Unsaturated Compounds	470
	<i>References</i>	473
<b>CHAPTER 7</b> <i>Stereochemistry of Aromatic Compounds</i>		477
7.1.	Conformations of Substituted Arenes	477
7.2.	Shielding of Ortho-Positions	482
7.3.	Steric Break in Conjugation	483
7.4.	Steric Hindrances in Reactions of Aromatic Compounds	486
7.5.	Optically Active Aromatic Compounds	488
7.5.1.	Benzene Derivatives with a Chiral Side Chain	488
7.5.2.	Atropisomerism of Biphenyl Derivatives	493
7.5.3.	Cyclophanes and Ansa Compounds	498
7.5.4.	Other Types of Atropisomerism	502
7.6.	Chiral Benzocycloalkanes	504
7.7.	Optical Activity of Tri- <i>o</i> -Thymotide	506
7.8.	Helicenes and Helical Phenanthrenes	506
7.9.	Annulenes	509
7.10.	Compounds of the Triphenylmethane Series	510
	<i>References</i>	511
<b>CHAPTER 8</b> <i>Stereochemistry of Heterocyclic Compounds</i>		514
8.1.	Aromatic Heterocycles	514
8.2.	The Shape of Six-Membered Saturated Heterocycles	515

8.3.	Conformations and Configurations of Compounds of the Piperidine Series	516
8.4.	Bicyclic Nitrogen-Containing Heterocycles	520
8.5.	The Anomeric Effect	525
8.6.	1,3-Dioxans	528
8.7.	1,4-Dioxans and Their Analogues	530
8.8.	Other (Not Six-Membered) Oxygen-Containing Heterocycles	531
8.9.	Sulphur-Containing Heterocycles	536
	<i>References</i>	538
<b>CHAPTER 9 Stereochemistry of Nitrogen</b>		540
9.1.	Spatial Structure of the Amines	540
9.2.	Geometrical Isomerism of the Oximes	542
9.3.	Stereochemistry of Schiff's Bases	549
9.4.	Other Cases of Stereochemistry of a Doubly Bonded Nitrogen	558
9.5.	Optical Activity of Compounds of Tervalent Nitrogen	562
9.6.	Optical Activity of Compounds of Four-Coordinate Nitrogen	566
9.7.	Stereochemistry of the Amides	567
	9.7.1. Monosubstituted Amides	570
	9.7.2. Disubstituted Amides	572
	9.7.3. N-Heterocyclic Amides	574
	9.7.4. The Analogues of Amides	576
	9.7.5. Thioamides and Their Analogues	579
	<i>References</i>	582
<b>CHAPTER 10 Stereochemistry of Compounds of Silicon, Phosphorus, Arsenic, Sulphur, Boron, and Other Elements</b>		585
10.1.	Stereochemistry of Silicon Compounds	585
10.2.	Stereochemistry of Phosphorus Compounds	588
10.3.	Stereochemistry of Arsenic Compounds	595
10.4.	Stereochemistry of Sulphur Compounds	597
10.5.	Stereochemistry of Boron Compounds	601
	<i>References</i>	603
<b>CHAPTER 11 Stereochemistry of Natural Compounds</b>		605
11.1.	Carbohydrates	605
	11.1.1. Determination of the Configuration of Monosaccharides	605
	11.1.2. Conformations of Sugars	611
	11.1.3. Oligosaccharides and Polysaccharides	616
11.2.	The Spatial Structure of Proteins	617
11.3.	Cycloenantiomerism	624

11.4.	Nucleic Acids	625
11.5.	Steroids	629
11.6.	Stereospecificity of Biochemical Reactions	633
11.7.	The Problem of the Origin of Primary Asymmetry	637

	<i>References</i>	641
--	-------------------	-----

**CHAPTER 12** *Stereochemistry of Complex Compounds* 643

12.1.	General	643
12.2.	Complexes with Coordination Numbers 2 and 4	643
12.3.	Complexes with Coordination Number 5	649
12.4.	Complexes with Coordination Number 6	649
12.5.	The Nature of Optical Activity of Complex Compounds	655
12.6.	Metallocenes and Related Compounds	656

	<i>References</i>	658
