<i>Preface</i>	vii
<i>Acknowledgements</i>	viii
<b>1 CIVIL ENGINEERING CONTRACTS</b>	<b>1</b>
Contract Documents: Form of Contract; General Conditions of Contract; Specification; Bill of Quantities; Contract Drawings; Form of Tender – I.C.E. Conditions – I.Struct.E. Conditions – Types of Contract.	
<b>2 PURPOSE AND ARRANGEMENT OF AND SOURCES OF INFORMATION FOR SPECIFICATIONS</b>	<b>16</b>
Functions of Specification – General Arrangement – Drafting of Specification Clauses – Sources of Information – British Standards – Codes of Practice.	
<b>3 GENERAL CLAUSES IN SPECIFICATIONS</b>	<b>26</b>
General Contractual Matters – Legal Provisions – General Matters affecting Cost of Job – Use of Site – Temporary Works – Materials and Workmanship Requirements – General Working Requirements – Records.	
<b>4 SPECIFICATION OF EARTHWORK</b>	<b>49</b>
Site Investigation and Clearance – Excavation, Fill and Disposal – Keeping Excavations free from Water – Timbering – Tunnel Work – Cofferdams – Dredging.	
<b>5 SPECIFICATION OF CONCRETE WORK</b>	<b>65</b>
Materials – Concrete Work, including mixing, placing, joints, curing and testing – Reinforcement – Shuttering.	
<b>6 SPECIFICATION OF BRICKWORK, MASONRY AND WATERPROOFING</b>	<b>88</b>
Brickwork: Bricks; Mortars; Brickwork; Damp-proof Courses; Faced Brickwork, etc. Masonry: Dressed Stonework; Rubble Walling; Special Stonework; Fixings; Cast Stonework. Waterproofing: Asphalt; Bitumen Sheeting.	
<b>7 SPECIFICATION OF PILING</b>	<b>103</b>
Concrete Piles, including materials, shoes, casting, curing, trial piles, handling, pitching, driving and lengthening. Timber Piles, including timber, creosoting or tarring, shoes and rings, pitching, driving and cutting off heads. Steel Sheet Piling, including driving, cutting and drilling piles.	

8	SPECIFICATION OF IRON AND STEELWORK Structural Steel – Fabrication – Erection – Bolting – Riveting – Welding – Measurement – Testing – Ladders – Guardrails – Open Steel Flooring – Painting – Wall and Roof Sheet Coverings: Asbestos Cement; Aluminium; Corrugated Steel.	114
9	SPECIFICATION OF TIMBERWORK Timberwork in Wharves and Jetties: Quality of Timber; Workmanship; Fender Piles, Rubbing Pieces, Walings, Braces, Guardrails and Decking; Tarring and Creosoting; Bolts and Nuts; Measurement; Equipment – Steps, Footbridge and Scumboards – Joinery: Quality of Timber; Windows; Doors; Miscellaneous Joinery Work; Painting.	126
10	SPECIFICATION OF ROADS AND PAVINGS Materials – Road Bases, including lean concrete and soil cement – Flexible Road Construction: Tarmacadam; Bitumen Macadam; Rolled Asphalt; Cold Asphalt; Surface Dressing – Concrete Carriageway Construction – Kerbs, Channels, etc. – Road Gullies – Electric Cable Ducts – Footpaths: Tarmacadam; Asphalt; Flagged; 'Insitu' Concrete – Grass Verges – Chain-link Fencing.	142
11	SPECIFICATION OF SEWERS AND DRAINS Materials – Excavation – Pipelaying, including concrete protection and testing of pipes – Manholes: Brick and Precast Concrete; Associated Metalwork – Tunnel and Shaft linings: Cast Iron and Precast Concrete Segments; Jointing; Grouting; Concrete Lining – Ventilating Columns – Sewage Works Filters, Scumboards and Screens.	171
12	SPECIFICATION OF PIPELINES Materials, including valves – Pipelaying under varying conditions – Watercourse and River Crossings – Reinstatement of Trench Surfaces – Testing and Sterilisation of Pipes – Valve Chambers: Sluice Valves; Air Valves; Washouts; Hydrants.	200
13	SPECIFICATION OF RAILWAY TRACKWORK Preliminary Work – Track Materials: Ballast; Sleepers; Rails; Fishplates; Rail Fixings; Separators; Bearing Plates; Chairs and Keys; Laying Permanent Way: Laying Ballast; Laying Track; Points and Crossings; Measurement of Railway Work.	215
	<i>Appendix I</i> List of British Standard Codes of Practice relating to Civil Engineering Work	229
	<i>Appendix II</i> List of British Standards relating to Civil Engineering Work	231
	<i>Appendix III</i> Typical Programme of Works covering Tunnels and Shafts to a Circulating Water System to a Power Station	237
	<i>Appendix IV</i> Metric Conversion Table	239
	<i>Index</i>	241

In a civil engineering contract the specification is a vital document and its scope and accuracy are very important to the Engineer and to the Contractor. This book deals with the drafting of specification clauses for all facets of civil and municipal engineering work and indicates how a comprehensive but straightforward specification can be produced. Both imperial and metric units are shown throughout, there is a metric conversion table in the appendices and references to all relevant British Standards and Codes of Practice are included.

*Extracts from reviews of the First Edition*

'Engineers, both civil and municipal, and contractors, should find this book useful and there may well be much of interest in it for members of the allied professions. Students of engineering will undoubtedly find it a most useful guide to the purpose and writing of specifications as Dr Seeley, himself a lecturer, has clearly had their interests in mind in his method of presentation and selection of content.'

*Civil Engineering*

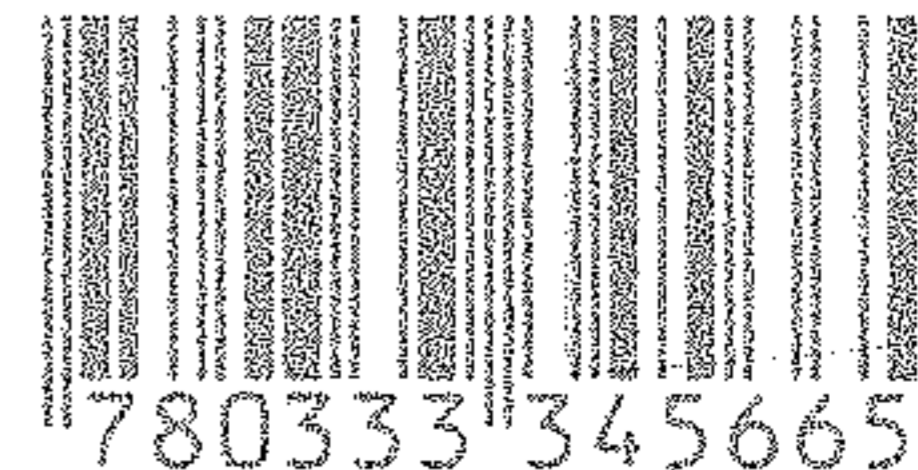

'Much of the book is devoted to a series of typical clauses with explanatory notes. They should prove very useful to engineers compiling specifications or to students specialising in civil and municipal engineering.

... the reviewer has no hesitation in recommending the book as a useful reference for standard clauses.'

*The Engineer*

The author, **Ivor H. Seeley**, is at present Head of the Department of Surveying and Dean of the School of Environmental Studies at Trent Polytechnic, Nottingham. Dr Seeley has had extensive experience as a practising municipal engineer, with consulting civil engineers and on the headquarters staff of the Central Electricity Generating Board. He is well known for his many successful books on civil engineering, building and surveying topics.
