Inorganic chemistry

ALAN G. SHARPE

Lecturer in Chemistry, University of Cambridge

THE ENGLISH LANGUAGE BOOK SOCIETY
and
LONGMAN

Contents

<i>Preface</i>	xiii
1 Nuclear chemistry	1
1.1 Introduction	1
1.2 Nuclear binding energy	2
1.3 Radioactivity and nuclear reactions	4
1.4 Nuclear fission and nuclear fusion	7
1.5 Spectroscopic techniques based on nuclear properties	9
1.6 <i>Ortho</i> - and <i>para</i> -hydrogen	14
1.7 The separation of stable isotopes	15
1.8 The separation of unstable isotopes	19
1.9 The applications of isotopes	20
Problems	27
References for further reading	28
Appendix	30
2 Quantum theory and atomic structure	34
2.1 Introduction	34
2.2 The older quantum theory	35
2.3 Bohr's theory of the atomic spectrum of hydrogen	36
2.4 The extension of Bohr's theory to systems containing more than one electron	40
2.5 Wave mechanics	42
2.6 The Schrödinger equation	44
2.7 Applications of wave mechanics to simple problems	46
2.8 The hydrogen atom and other one-electron species	52
2.9 Angular momentum and the inner quantum number j	59
2.10 Many-electron atoms	61
Problems	62
References for further reading	63
3 Electronic configurations and some physical properties of atoms	65
3.1 Introduction	65
3.2 The periodic table	70
3.3 Hund's rules and state symbols for free atoms and ions	73

3.4	Ionisation energies	79
3.5	Electron affinities	82
3.6	Atomic dimensions	84
	Problems	85
	References for further reading	86
4	Electronic configurations of molecules	87
4.1	Introduction	87
4.2	Molecular orbital theory: homonuclear diatomic molecules	88
4.3	Molecular orbital theory: heteronuclear diatomic molecules	95
4.4	Molecular orbital theory: polyatomic molecules	98
4.5	Valence bond theory: diatomic molecules	100
4.6	Valence bond theory: polyatomic molecules	103
4.7	Multiple bonding in polyatomic molecules	106
4.8	Multicentre bonding	109
4.9	Macromolecules and metals	110
	Problems	113
	References for further reading	114
5	Some physical properties of molecules	115
5.1	Introduction	115
5.2	The shapes of molecules and ions of non-transition elements	115
5.3	Symmetry	119
5.4	Bond energies	122
5.5	Force constants	126
5.6	Bond lengths	127
5.7	Bond polarities and electronegativity	129
	Problems	133
	References for further reading	133
6	The structures and energetics of inorganic solids	135
6.1	Introduction	135
6.2	The close packing of spheres	139
6.3	The structures of ionic solids	143
6.4	Ionic radii	147
6.5	Radius ratio rules	149
6.6	Lattice energy	151
6.7	The Born-Haber cycle	155
6.8	Applications of lattice energetics	156
6.9	Metals	160
6.10	The defect solid state	163
	Problems	165
	References for further reading	166
7	Inorganic chemistry in aqueous media	167
7.1	Introduction	167
7.2	Conventions and units in aqueous solution chemistry	169
7.3	The hydration of ions and the solubilities of salts	173
7.4	The ionisation of acids in aqueous solution	177

7.5	Complex formation	179
7.6	Formation constants of complexes	180
7.7	Factors affecting the stabilities of complexes containing only monodentate ligands	183
7.8	Redox processes	185
7.9	The stabilisation of oxidation states by complex formation or precipitation	189
7.10	Potential diagrams and oxidation state diagrams	192
7.11	Factors influencing the magnitudes of standard redox potentials	194
	Problems	195
	References for further reading	197
8	Inorganic chemistry in non-aqueous media	198
8.1	Introduction	198
8.2	Ammonia	201
8.3	Hydrogen fluoride	204
8.4	Sulphuric and fluorosulphuric acids	205
8.5	Bromine trifluoride	206
8.6	Dinitrogen tetroxide	208
	Problems	209
	References for further reading	210
9	Hydrogen	211
9.1	Introduction	211
9.2	Isotopes of hydrogen	211
9.3	The physical properties of hydrogen	213
9.4	The preparation and chemical properties of hydrogen	215
9.5	Hydrogen bonding	217
9.6	Classification and general properties of hydrides	223
	Problems	225
	References for further reading	225
10	The alkali metals	227
10.1	Introduction	227
10.2	The metals	229
10.3	Halides	230
10.4	Oxides and hydroxides	232
10.5	Salts of oxo-acids	235
10.6	Aqueous solution chemistry	237
10.7	Complexes	237
10.8	Organometallic compounds	238
	Problems	240
	References for further reading	240
11	Beryllium, magnesium and the alkaline earth metals	241
11.1	Introduction	241
11.2	The metals	244
11.3	Halides	245

11.4	Oxides and hydroxides	246
11.5	Salts of oxo-acids	247
11.6	Aqueous solution chemistry and complexes	249
11.7	Organometallic compounds	250
	Problems	252
	References for further reading	252
12	Boron, aluminium, gallium, indium and thallium	253
12.1	Introduction	253
12.2	The elements	256
12.3	Diborane and hydrogen compounds of aluminium, gallium, indium and thallium	258
12.4	The higher boranes and the carboranes	262
12.5	Metal borides	268
12.6	Halides and complex halides of boron	269
12.7	Halides and complex halides of aluminium, gallium, indium and thallium	272
12.8	Oxides, oxo-acids, oxo-anions and hydroxides	274
12.9	Nitrogen derivatives	278
12.10	Aluminium, gallium, indium and thallium salts of oxo-acids and aqueous solution chemistry	280
12.11	Organometallic compounds	282
	Problems	284
	References for further reading	285
13	Carbon, silicon, germanium, tin and lead	286
13.1	Introduction	286
13.2	The elements	290
13.3	Intercalation compounds of graphite	294
13.4	Hydrides	296
13.5	Carbides and silicides	298
13.6	Halides and complex halides	299
13.7	Oxides and oxo-acids of carbon	303
13.8	Oxides, oxo-acids and hydroxides of silicon, germanium, tin and lead	308
13.9	Silicates	310
13.10	Silicones	313
13.11	Sulphides	314
13.12	Cyanogen and its derivatives	315
13.13	Aqueous solution chemistry and oxo-acid salts of tin and lead	317
13.14	Organometallic compounds	318
	Problems	319
	References for further reading	320
14	Nitrogen, phosphorus, arsenic, antimony and bismuth	321
14.1	Introduction	321
14.2	The elements	325
14.3	Hydrides	327

14.4	Nitrides, phosphides and arsenides	335
14.5	Halides, oxohalides and complex halides	336
14.6	Oxides of nitrogen	343
14.7	Oxo-acids of nitrogen	347
14.8	Oxides of phosphorus, arsenic, antimony and bismuth	350
14.9	Oxo-acids of phosphorus, arsenic, antimony and bismuth	353
14.10	Phosphazenes	359
14.11	Sulphides	361
14.12	Aqueous solution chemistry	363
14.13	Organic derivatives	364
	Problems	366
	References for further reading	367
15	Oxygen, sulphur, selenium, tellurium and polonium	368
15.1	Introduction	368
15.2	The elements	372
15.3	Hydrides	377
15.4	Halides, oxohalides and complex halides	381
15.5	Oxides	386
15.6	Oxo-acids and their salts	389
15.7	Sulphur-nitrogen compounds	393
15.8	Aqueous solution chemistry of sulphur, selenium and tellurium	396
15.9	Organic derivatives	396
	Problems	397
	References for further reading	398
16	The halogens	399
16.1	Introduction	399
16.2	The elements	403
16.3	Hydrogen halides	407
16.4	The halides: some general considerations	408
16.5	Interhalogen compounds and polyhalogen ions	412
16.6	Oxides and oxofluorides of chlorine, bromine and iodine	417
16.7	Oxo-acids of the halogens and their salts	420
16.8	Aqueous solution chemistry	424
16.9	Organic derivatives	427
	Problems	428
	References for further reading	429
17	The noble gases	430
17.1	Introduction	430
17.2	Compounds of xenon	433
17.3	Compounds of krypton and radon	436
	Problems	436
	References for further reading	437
18	The transition elements	438
18.1	Introduction	438

18.2	Physical properties	439
18.3	Chemical properties	440
18.4	Coordination numbers and geometries in transition metal complexes	445
18.5	Isomerism in transition metal complexes	452
18.6	Structural isomerism	453
18.7	Geometrical isomerism	455
18.8	Optical isomerism	457
	Problems	459
	References for further reading	460
19	Electronic configurations, electronic spectra, and magnetic properties of transition metal compounds	461
19.1	Introduction	461
19.2	Bonding in transition metal complexes: valence bond theory	462
19.3	Bonding in transition metal complexes: crystal field theory	465
19.4	Bonding in transition metal complexes: molecular orbital theory	473
19.5	Electronic spectra	480
19.6	Magnetic properties	485
	Problems	488
	References for further reading	489
20	Thermodynamic aspects of transition metal chemistry	490
20.1	Introduction	490
20.2	Crystal field stabilisation energies of octahedral and tetrahedral complexes	490
20.3	Oxidation states in aqueous media	496
20.4	Ionisation energies	498
	Problems	502
	References for further reading	503
21	Kinetic aspects of transition metal chemistry	504
21.1	Introduction	504
21.2	Substitution at a metal atom: some general considerations	505
21.3	Substitution in octahedral complexes	508
21.4	The racemisation of octahedral complexes	512
21.5	The correlation of rates of substitution in octahedral complexes with electronic configuration	513
21.6	Substitution in planar complexes	515
21.7	Redox processes: outer sphere reactions	518
21.8	Redox processes: inner sphere reactions	519
21.9	Complementary and non-complementary reactions	521
	Problems	522
	References for further reading	523
22	Transition metal carbonyls and related compounds	525
22.1	Introduction	525
22.2	The preparation and properties of transition metal carbonyls	527

22.3	The structures of transition metal carbonyls	530
22.4	Carbonyl hydrides and carbonylate anions and cations	533
22.5	Carbonyl halides	535
22.6	Phosphine and phosphorus trihalide complexes	536
22.7	Dinitrogen complexes	537
22.8	Nitric oxide complexes	538
22.9	Cyano complexes	540
	Problems	542
	References for further reading	543
23	Organometallic compounds of the transition metals	544
23.1	Introduction	544
23.2	Alkyl and aryl complexes	546
23.3	Alkene complexes	548
23.4	Allyl and butadiene complexes	550
23.5	Complexes containing delocalised cyclic systems	552
23.6	Organometallic compounds in homogeneous catalysis	557
	Problems	561
	References for further reading	562
24	Transition metals of the first series	563
24.1	Introduction	563
24.2	Scandium	564
24.3	Titanium	566
24.4	Vanadium	570
24.5	Chromium	573
24.6	Manganese	579
24.7	Iron	583
24.8	Cobalt	590
24.9	Nickel	595
24.10	Copper	599
24.11	Zinc	603
	Problems	604
	References for further reading	605
25	Transition metals of the second and third series	606
25.1	Introduction	606
25.2	Yttrium and lanthanum	610
25.3	Zirconium and hafnium	611
25.4	Niobium and tantalum	614
25.5	Molybdenum and tungsten	617
25.6	Technetium and rhenium	623
25.7	The platinum metals: general aspects	625
25.8	Ruthenium and osmium	626
25.9	Rhodium and iridium	628
25.10	Palladium and platinum	630
25.11	Silver and gold	634
25.12	Cadmium and mercury	637

Problems	642
References for further reading	643
26 Inner transition elements: the lanthanides	644
26.1 Introduction	644
26.2 Occurrence and separation	647
26.3 The metals	648
26.4 The tripositive oxidation state	650
26.5 The dipositive oxidation state	652
26.6 The tetrapositive oxidation state	653
Problems	655
References for further reading	655
27 Inner transition elements: the actinides	656
27.1 Introduction	656
27.2 Isolation and general chemistry of actinium and the actinides	658
27.3 Actinium	660
27.4 Thorium	660
27.5 Protactinium	661
27.6 Uranium	662
27.7 Neptunium, plutonium and americium	664
27.8 Curium and later elements	667
Problems	668
References for further reading	669
<i>Answers to numerical problems</i>	670
<i>Index</i>	672

ELBS

The ENGLISH LANGUAGE BOOK SOCIETY,
an association of leading British publishers, brings you
essential, up-to-date textbooks at reduced prices.

The sterling price of
INORGANIC CHEMISTRY is
£4.25

Inside you will find a list of some other ELBS low-priced
editions. Your local bookseller may also be able to show
you a complete list of ELBS titles.

This major textbook provides an integrated, critical and
readable account of a subject that has often been presented
in a disjointed and confusing fashion. Its level is broadly that
of the first two years of an Honours degree course.

Dr Sharpe begins by introducing such fundamental topics as
nuclear chemistry, quantum theory and atomic structure,
inorganic thermochemistry, the structure of solids, and
solution equilibria. He then goes on to examine the individual
elements and their compounds. Extensive use is made of
cross-references, and each chapter ends with some problems
for the student to solve and an annotated list of further reading.

Reviews of this book include the following:

'This is the best account of modern inorganic chemistry I have
seen produced recently . . . The author takes a novel and
exciting approach'. *New Scientist*

ISBN 0 582 40723 0
