THIRD EDITION

Probability and Statistics in Engineering and Management Science

WILLIAM W. HINES
DOUGLAS C. MONTGOMERY

1

Contents

1 Introduction and Data Description 1

1-1 The Field of Probability and Statistics 1
1-2 Graphical Presentation of Data 4
1-2.1 Measurement Data: the Frequency Distribution and Histogram 4
1-2.2 Count Data: the Pareto Chart 7
1-3 Numerical Description of Data 8
1-3.1 Measures of Central Tendency 9
1-3.2 Measures of Dispersion 11
1-3.3 Grouped Data 15
1-4 Exploratory Data Analysis 18
1-4.1 The Stem and Leaf Plot 18
1-4.2 The Box Plot 20
1-5 Summary 21
1-6 Exercises 22

2 An Introduction to Probability 28

2-1 Introduction 28
2-2 A Review of Sets 29
2-3 Experiments and Sample Spaces 33
2-4 Events 36
2-5 Probability Definitions and Assignment 37
2-6 Finite Sample Spaces and Enumeration 42
2-6.1 Tree Diagram 43
2-6.2 Multiplication Principle 43
2-6.3 Permutations 44
2-6.4 Combinations 45
2-6.5 Permutations of Like Objects 47
2-7 Conditional Probability 47
2-8 Partitions, Total Probability, and Bayes' Theorem 54

2-9 Summary 56
2-10 Exercises 57

3 One-Dimension Random Variables 63

3-1 Introduction 63
3-2 The Distribution Function 67
3-3 Discrete Random Variables 69
3-4 Continuous Random Variables 73
3-5 Some Characteristics of Distributions 75
3-6 Chebyshev's Inequality 80
3-7 Summary 82
3-8 Exercises 82

4 Functions of One Random Variable and Expectation 86

4-1 Introduction 86
4-2 Equivalent Events 86
4-3 Functions of a Discrete Random Variable 88
4-4 Continuous Functions of a Continuous Random Variable 90
4-5 Expectation 93
4-6 Approximations to $E(H(X))$ and $V(H(X))$ 97
4-7 The Moment-Generating Function 99
4-8 Summary 102
4-9 Exercises 103

5 Joint Probability Distributions 108

5-1 Introduction 108
5-2 Joint Distributions for Two-Dimensional Random Variables 109
5-3 Marginal Distributions 113
5-4 Conditional Distributions 118
5-5 Conditional Expectation 123
5-6 Regression of the Mean 125
5-7 Independence of Random Variables 127
5-8 Covariance and Correlation 128
5-9 The Distribution Function for Two-Dimensional Random Variables 131
5-10 Functions of Two Random Variables 133
5-11 Joint Distributions of Dimension $n > 2$ 136
5-12 Linear Combinations 138
5-13 Moment Generating Functions and Linear Combinations 142
5-14 The Law of Large Numbers 142
5-15 Summary 144
5-16 Exercises 145

6 Some Important Discrete Distributions 151

6-1 Introduction 151
6-2 Bernoulli Trials and the Bernoulli Distribution 151

6-3 The Binomial Distribution 154
6-3.1 Mean and Variance of the Binomial Distribution 154
6-3.2 The Cumulative Binomial Distribution 156
6-3.2 An Application of the Binomial Distribution 156
6-4 The Geometric Distribution 159
Mean and Variance of the Geometric Distribution 159
6-5 The Pascal Distribution 161
Mean and Variance of the Pascal Distribution 162
6-6 The Multinomial Distribution 162
6-7 The Hypergeometric Distribution 163
Mean and Variance of the Hypergeometric Distribution 164
6-8 The Poisson Distribution 165
6-8.1 Development from a Poisson Process 165
6-8.2 Development of the Poisson Distribution from the Binomial 166
6-8.3 Mean and Variance of the Poisson Distribution 167
6-9 Some Approximations 169
6-10 Generation of Realizations 170
6-11 Summary 170
6-12 Exercises 172

7 Some Important Continuous Distributions 176

7-1 Introduction 176
7-2 The Uniform Distribution 176
Mean and Variance of the Uniform Distribution 177
7-3 The Exponential Distribution 179
7-3.1 The Relationship of the Exponential Distribution to the Poisson Distribution 179
7-3.2 Mean and Variance of the Exponential Distribution 180
7-3.3 Memoryless Property of the Exponential Distribution 183
7-4 The Gamma Distribution 183
7-4.1 The Gamma Function 183
7-4.2 Definition of the Gamma Distribution 184
7-4.3 Relationship Between the Gamma Distribution and the Exponential Distribution 184
7-4.4 Mean and Variance of the Gamma Distribution 185
7-5 The Weibull Distribution 187
Mean and Variance of the Weibull Distribution 187
7-6 Generation of Realizations 188
7-7 Summary 189
7-8 Exercises 191

8 The Normal Distribution 194

8-1 Introduction 194
8-2 The Normal Distribution 194
8-2.1 Properties of the Normal Distribution 195

8-2.2 Mean and Variance of the Normal Distribution 196
8-2.3 The Cumulative Normal Distribution 197
8-2.4 The Standard Normal Distribution 197
8-2.5 Problem-Solving Procedure 198
8-3 The Reproductive Property of the Normal Distribution 202
8-4 The Central Limit Theorem 205
8-5 The Normal Approximation to the Binomial Distribution 209
8-6 The Lognormal Distribution 212
8-6.1 Density Function 212
8-6.2 Mean and Variance of the Lognormal Distribution 213
8-6.3 Other Moments 214
8-6.4 Properties of the Lognormal Distribution 214
8-7 The Bivariate Normal Distribution 216
8-8 Generations of Normal Realizations 221
8-9 Summary 222
8-10 Exercises 222

9 Random Samples and Sampling Distributions 228

9-1 Random Samples 228
9-2 Statistics and Sampling Distributions 229
9-3 The Chi-Square Distribution 231
9-4 The *t* Distribution 234
9-5 The *F* Distribution 238
9-6 Summary 241
9-7 Exercises 241

10 Parameter Estimation 244

10-1 Point Estimation 244
10-1.1 Properties of Estimators 245
10-1.2 The Method of Maximum Likelihood 250
10-1.3 The Method of Moments 253
10-1.4 Precision of Estimation: the Standard Error 254
10-2 Confidence Interval Estimation 255
10-2.1 Confidence Interval on the Mean, Variance Known 257
10-2.2 Confidence Interval on the Difference in Two Means, Variance Known 260
10-2.3 Confidence Interval on the Mean of a Normal Distribution, Variance Unknown 262
10-2.4 Confidence Interval on the Difference in Means of Two Normal Distributions, Variances Unknown 265
10-2.5 Confidence Interval on $\mu_1 - \mu_2$ for Paired Observations 268
10-2.6 Confidence Interval on the Variance of a Normal Distribution 269
10-2.7 Confidence Interval on the Ratio of Variances of Two Normal Distributions 271
10-2.8 Confidence Interval on a Proportion 273
10-2.9 Confidence Interval on the Difference in Two Proportions 275
10-2.10 Approximate Confidence Intervals in Maximum Likelihood Estimation 276

10-2.11 Simultaneous Confidence Intervals 277
10-3 Summary 278
10-4 Exercises 281

11 Tests of Hypotheses 288

11-1 Introduction 288
11-1.1 Statistical Hypotheses 288
11-1.2 Type I and Type II Errors 289
11-1.3 One-Sided and Two-Sided Hypotheses 292
11-2 Tests of Hypotheses on the Mean, Variance Known 294
11-2.1 Statistical Analysis 294
11-2.2 Choice of Sample Size 296
11-2.3 The Relationship Between Tests of Hypotheses and Confidence 300
11-2.4 Large Sample Test with Unknown Variance 300
11-2.5 *P*-Values 300
11-3 Tests of Hypotheses on the Equality of Two Means, Variances Known 301
11-3.1 Statistical Analysis 301
11-3.2 Choice of Sample Size 303
11-4 Tests of Hypotheses on the Mean of a Normal Distribution, Variance Unknown 304
11-4.1 Statistical Analysis 305
11-4.2 Choice of Sample Size 306
11-5 Tests of Hypotheses on the Means of Two Normal Distributions, Variances Unknown 308
11-5.1 Case 1: $\sigma_1^2 = \sigma_2^2$ 308
11-5.2 Case 2: $\sigma_1^2 \neq \sigma_2^2$ 310
11-5.3 Choice of Sample Size 311
11-6 The Paired *t*-Test 312
11-7 Tests of Hypotheses on the Variance 315
11-7.1 Test Procedures for a Normal Population 315
11-7.2 Choice of Sample Size 316
11-7.3 A Large-Sample Test Procedure 317
11-8 Tests for the Equality of Two Variances 318
11-8.1 Test Procedure for Normal Populations 318
11-8.2 Choice of Sample Size 320
11-8.3 A Large-Sample Test Procedure 320
11-9 Tests of Hypotheses on a Proportion 321
11-9.1 Statistical Analysis 321
11-9.2 Choice of Sample Size 322
11-10 Tests of Hypotheses on Two Proportions 323
11-10.1 A Large-Sample Test for H_0: $p_1 = p_2$ 323
11-10.2 Choice of Sample Size 324
11-10.3 A Small Sample Test for H_0: $p_1 = p_2$ 325

11-11 Testing for Goodness of Fit 327
11-11.1 The Chi-Square Goodness-of-Fit Test 327
11-11.2 Probability Plotting 331
11-11.3 Selecting the Form of a Distribution 333
11-12 Contingency Table Tests 335
11-13 Summary 340
11-14 Exercises 340

12 Design and Analysis of Single-Factor Experiments: the Analysis of Variance 353

12-1 The Completely Randomized Single-Factor Experiment 353
12-1.1 An Example 353
12-1.2 The Analysis of Variance 354
12-1.3 Estimation of the Model Parameters 361
12-1.4 Residual Analysis and Model Checking 363
12-1.5 An Unbalanced Design 365
12-2 Tests on Individual Treatment Means 366
12-2.1 Orthogonal Contrasts 366
12-2.2 Duncan's Multiple Range Test 369
12-3 The Random Effects Model 371
12-4 The Randomized Block Design 375
12-4.1 Design and Statistical Analysis 375
12-4.2 Tests on Individual Treatment Means 379
12-4.3 Residual Analysis and Model Checking 380
12-5 Determining Sample Size in Single-Factor Experiments 382
12-6 Summary 385
12-7 Exercises 385

13 Design of Experiments with Several Factors 390

13-1 Examples of Experiment Design Applications 390
13-2 Factorial Experiments 393
13-3 Two-Factor Factorial Experiments 397
13-3.1 Statistical Analysis of the Fixed Effects Model 398
13-3.2 Model Adequacy Checking 403
13-3.3 One Observation per Cell 405
13-3.4 The Random Effects Model 405
13-3.5 The Mixed Model 408
13-4 General Factorial Experiments 409
13-5 The 2^k Factorial Design 413
13-5.1 The 2^2 Design 414
13-5.2 The 2^k Design for $k > 2$ Factors 421
13-5.3 A Single Replicate of the 2^k Design 428
13-6 Confounding in the 2^k Design 433
13-7 Fractional Replication of the 2^k Design 438

13-7.1 The One-Half Fraction of the 2^k 438
13-7.2 Smaller Fractions: the 2^{k-p} Fractional Factorial 444
13-8 Summary 447
13-9 Exercises 448

14 Simple Linear Regression and Correlation 455

14-1 Simple Linear Regression 456
14-2 Hypothesis Testing in Simple Linear Regression 461
14-3 Interval Estimation in Simple Linear Regression 465
14-4 Prediction of New Observations 467
14-5 Measuring the Adequacy of the Regression Model 469
14-5.1 Residual Analysis 469
14-5.2 The Lack-of-Fit Test 470
14-5.3 The Coefficient of Determination 474
14-6 Transformation to a Straight Line 475
14-7 Correlation 476
14-8 Summary 480
14-9 Exercises 480

15 Multiple Regression 487

15-1 Multiple Regression Models 487
15-2 Estimation of the Parameters 488
15-3 Confidence Intervals in Multiple Linear Regression 496
15-4 Prediction of New Observations 498
15-5 Hypothesis Testing in Multiple Linear Regression 499
15-5.1 Test for Significance of Regression 499
15-5.2 Tests on Individual Regression Coefficients 502
15-6 Measures of Model Adequacy 505
15-6.1 The Coefficient of Multiple Determination 505
15-6.2 Residual Analysis 506
15-6.3 Testing Lack of Fit Using Near Neighbors 508
15-7 Polynomial Regression 511
15-8 Indicator Variables 514
15-9 The Correlation Matrix 517
15-10 Problems in Multiple Regression 521
15-10.1 Multicollinearity 521
15-10.2 Influential Observations in Regression 527
15-10.3 Autocorrelation 529
15-11 Selection of Variables in Multiple Regression 532
15-15.1 The Model-Building Problem 532
15-15.2 Computational Procedures for Variable Selection 532
15-12 Sample Computer Output 543
15-13 Summary 552
15-14 Exercises 552

16 Nonparametric Statistics 559

16-1 Introduction 559
16-2 The Sign Test 560
16-2.1 A Description of the Sign Test 560
16-2.2 The Sign Test for Paired Samples 563
16-2.3 Type II Error (β) for the Sign Test 563
16-2.4 Comparison of the Sign Test and the t-Test 565
16-3 The Wilcoxon Signed Rank Test 565
16-3.1 A Description of the Test 566
16-3.2 A Large-Sample Approximation 567
16-3.3 Paired Observations 567
16-3.4 Comparison with the t-Test 568
16-4 The Wilcoxon Rank-Sum Test 569
16-4.1 Description of the Test 569
16-4.2 A Large-Sample Approximation 571
16-4.3 Comparison with the t-Test 571
16-5 Nonparametric Methods in the Analysis of Variables 571
16-5.1 The Kruskal-Wallis Test 571
16-5.2 The Rank Transformation 574
16-6 Summary 575
16-7 Exercises 575

17 Statistical Quality Control and Reliability Engineering 579

17-1 Quality Improvement and Statistics 579
17-2 Statistical Quality Control 580
17-3 Statistical Process Control 581
17-3.1 Introduction to Control Charts 582
17-3.2 Control Charts for Measurements 583
17-3.3 Control Charts for Attributes 592
17-3.4 Other SPC Problem Solving Tools 598
17-3.5 Implementing SPC 601
17-4 Statistically-Based Sampling Plans 602
17-5 Tolerance Limits 607
17-6 Reliability Engineering 608
17-6.1 Basic Reliability Definitions 608
17-6.2 The Exponential Time to Failure Model 611
17-6.3 Simple Serial Systems 613
17-6.4 Simple Active Redundancy 615
17-6.5 Standby Redundancy 617
17-6.6 Life Testing 619
17-6.7 Reliability Estimation with a Known Time to Failure Distribution 620
17-6.8 Estimation with the Exponential Time to Failure Distribution 620
17-6.9 Demonstration and Acceptance Testing 623
17-7 Summary 623
17-8 Exercises 623

18 Stochastic Processes and Queueing 630

18-1 Introduction 630
18-2 Discrete-Time Markov Chains 630
18-3 Classification of States and Chains 633
18-4 Continuous-Time Markov Chains 636
18-5 The Birth-Death Process in Queueing 640
18-6 Considerations in Queueing Models 643
18-7 Basic Single Server Model with Constant Rates 644
18-8 Single Server with Limited Queue Length 647
18-9 Multiple Servers with an Unlimited Queue 648
18-10 Other Queueing Models 650
18-11 Summary 650
18-12 Exercises 651

19 Statistical Decision Theory 654

19-1 The Structure and Concept of Decisions 654
19-2 Bayesian Inference 660
19-3 Applications to Estimation 662
19-4 Applications to Hypothesis Testing 666
19-5 Summary 668
19-6 Exercises 668

Appendix 671

Table I Cumulative Poisson Distribution 672
Table II Cumulative Standard Normal Distribution 675
Table III Percentage Points of the χ^2 Distribution 677
Table IV Percentage Points of the t Distribution 679
Table V Percentage Points of the F Distribution 680
Chart VI Operating Characteristic Curves 685
Chart VII Operating Characteristic Curves for the Fixed Effects Model Analysis of Variance 694
Chart VIII Operating Characteristic Curves for the Random Effects Model Analysis of Variance 698
Table IX Critical Values for the Wilcoxon Two-sample Test 702
Table X Critical Values for the Sign Test 704
Table XI Critical Values for the Wilcoxon Signed-rank Test 705
Table XII Significant Ranges for Duncan's Multiple Range Test 706
Table XIII Factors for Quality Control Charts 708
Table XIV Factors for Two-sided Tolerance Limits 709
Table XV Random Numbers 711
