Contents

Trademark Notices	xvii
1 Introduction to QuickBASIC	1
Why Is a Compiler Better?	1
What Do I Need to Run QuickBASIC?	2
Copying the Programs	2
Starting QuickBASIC	3
Typing In a Simple Program	3
A Program to Read In Two Numbers	5
Clearing Memory—The NEW Command	5
Editing the Current Program	6
Capitalization	6
Running Our Second Program	7
Error Checking and Help	7
Exiting from QuickBASIC	8
2 Elements of the BASIC Language	9
The Shape of a BASIC Program	9
Types of Data in QuickBASIC	10
Variables in BASIC	11
	vii

Case of Variable Names	12
Restrictions on Variable Names	12
Types of Variables	12
Why We Use Different Data Types	14
Defining Types by Letter	15
Named Constants in QuickBASIC	15
Doing Arithmetic in BASIC	16
Integer Multiplication and Division	17
Order of Operations in an Arithmetic Expression	18
How BASIC Converts between Types	19
Printing Out Results	19
Reading In Data—The READ and DATA Statements	20
Entering Data—The INPUT Statement	21
Prompting Messages during INPUT	22
Reading In Strings	22
The LINE INPUT Statement	23
Controlling the Format of Print Statements	23
Representing Numbers in Other Bases	23
3 Making Decisions in BASIC	25
The FOR–NEXT Loop	25
The FOR–NEXT STEP Loop	26
Programming Style	27
The WHILE–WEND Loop	28
Cautions in Using WHILE	29
The DO–LOOP Statements	30
Differences between WHILE, FOR, and DO	30
Combining Logical Tests	31
Making Decisions with the IF–THEN Statement	33
The IF–THEN–ELSE Statement	34
The IF–THEN–ELSEIF Multiple Statement	34
The SELECT CASE Statement	35
Relational Operators in SELECT CASE Statements	36
How to Use AND and OR for Examining Bits	37
4 Handling Strings and Using Functions in BASIC	39
Library Functions in BASIC	39
Classification of Functions	39

Defining New Functions in BASIC	45
FUNCTION Subprograms	45
Viewing and Compiling Functions	46
Variables Used inside a Function	46
Converting an Entire String to Uppercase	46
5 Using Arrays and Files in QuickBASIC	49
Arrays	49
Limits on Arrays	50
Multidimensional Arrays	51
Using CONST Statements for DIMs	51
Limits on Arrays Using the /ah Switch	52
Specifying Different Subscript Ranges	52
Using the DIM Statement to Specify Type	52
Using Text Files in QuickBASIC	53
Writing to a Disk File	53
Closing a File	54
Format of a Text File	54
Finding File Numbers	55
Reading from a Text File	55
The LINE INPUT Statement and Text Files	55
Detecting the End of a File	56
Deleting and Renaming Files	56
Binary Files	57
6 More on Editing and Compiling Programs	59
Help in QuickBASIC	59
The Smart Editor	60
Parts of the QuickBASIC Screen	60
Editing	61
Moving the Cursor Around	62
Splitting and Combining Lines	63
Adding and Removing Lines	64
The Undo Function	64
Moving and Deleting Blocks of Characters	64
Deleting and Saving Text	65
The Menus and Editing	66

Disabling the Smart Editor	67
New Functions and SUBs	67
Searching for Text	67
Case Sensitivity in Searches	68
Changing Text	69
Compiling Programs	70
The Incremental Threaded Compiler	70
Ways of Compiling Your Program	71
The BC Compiler	71
Detecting Compilation Errors	72
Using a Mouse to Select Menus in QuickBASIC	73
Highlighting Areas Using the Mouse	75
Reading In and Saving Programs	75
Loading and Merging Files	76
Printing Your Program	76
Changing Display Parameters	77
Compiling Using the Math Coprocessor	78
7 Debugging Using QuickBASIC	81
A Simple Debugging Example	82
Single Stepping through the Program	83
Using the Immediate Window	86
Setting a Breakpoint	86
Conclusions about Debugging	87
8 Subroutines and Subprograms	89
Subroutines	89
Arguments in Subroutines	90
Subprograms	92
STATIC Variables in Subprograms	94
Arguments in Subprograms	94
Argument Types in Subprograms	95
Passing Arrays to Subprograms	96
Writing Subprograms	96
Differences between Subroutines, Subprograms, and Functions	97
Referring to Variables in Subprograms	98
Sharing Parameters with One Subprogram	99

Recursive Functions and Subprograms	99
Making Libraries and Quicklibraries	101
Loading a Quick Library	102
Keeping Variables in Common Storage between Modules	102
The SHARED Statement	103
Using Libraries to Make Stand-Alone Programs	104
Including Another File	106
Making Stand-Alone Programs with Libraries	107
9 Using the Keyboard and Display	109
The INKEY\$ Function	109
Reading Function and Cursor Keys	110
Positioning the Screen Cursor	112
Screen Character Colors	113
Graphics Characters on the Display	114
Using the Keyboard and Graphics Characters	117
The NumLock and CapsLock Keys	122
10 Memory Handling in QuickBASIC	125
Dynamic and Static Arrays	125
The ERASE Command	126
Rules of Dynamic and Static Arrays	126
Dynamic and Static Metacommands	127
Error Checking	127
Finding the Lower and Upper Bounds of an Array	128
Accessing Memory Locations Directly	128
Segment Addresses	128
11 Screen Graphics in QuickBASIC	131
The CGA	131
The COLOR Statement	132
The LINE Statement	133
Drawing a Straight Line on Axes	134
Drawing Circles	136
Relative Drawing	137
Filling in Figures Using PAINT	137

Colors in the EGA and VGA Displays	137
Accessing the Screen Memory of the Display Directly	140
Monochrome Display Character Memory	140
Deciding Which Display Is Installed	140
CGA and EGA Displays in Character Mode	141
Reading and Writing Memory in Graphics Mode	144
Graphics Mode for the EGA Card	145
Saving Screen Images to Files	147
Writing to the EGA Registers	148
10 Programming the Printer In QuickBASIC	151
Printer Control Codes	151
The WIDTH Statement for the Printer	152
Printing Graphic Images	153
Printing a Graphics Screen on the Printer	155
Screen Dump of an EGA or VGA Display	157
Printing Special Characters	158
13 Introduction to DOS	161
Starting Your Computer	161
Basic DOS Commands	162
Filenames in DOS	162
DOS Wildcard Characters	163
The DIR Command	164
The COPY Command	164
Formatting Disks and Diskettes	164
Directories and Subdirectories	165
The Importance of Subdirectories	167
Removing Directories	167
QuickBASIC Commands for Subdirectories	167
The PATH Command	168
Subdirectories and the Dot Commands	168
Subdirectories Used by QuickBASIC	169
The PROMPT Command—Keeping Track of Subdirectories	169
A Typical AUTOEXEC.BAT File	170
Redirecting Input and Output	171
Piping Data to the SORT Program	171

14	Advanced Use of Files and DOS Functions	173
	Record Files	173
	Defining a Random Access Record File	174
	Data in Record Files	175
	Reading a Record File	176
	Converting Values Written by Older Versions of BASIC	177
	Binary Files	177
	The INPUT\$ Function	178
	Calling DOS from within QuickBASIC	178
	Error Handling in QuickBASIC	179
	Detecting the Kind of Error	180
	Handling "File Not Found"	180
