Probability Concepts In Engineering Planning And Design

Volume 1 - Basic Principles

contents

1. *Role of Probability in Engineering*

1.1. Introduction 1

1.2. Uncertainty in Real-World Information 3
- 1.2.1. Uncertainty Associated with Randomness 3
- 1.2.2. Uncertainty Associated with Imperfect Modeling and Estimation 10

1.3. Design and Decision-Making Under Uncertainty 11
- 1.3.1. Planning and Design of Airport Pavement 12
- 1.3.2. Hydrologic Design 13
- 1.3.3. Design of Structures and Machines 13
- 1.3.4. Geotechnical Design 14
- 1.3.5. Construction Planning and Management 15
- 1.3.6. Photogrammetric, Geodetic, and Surveying Measurements 15

1.4. Control and Standards 16

1.5. Concluding Remarks 17

2. *Basic Probability Concepts*

2.1. Events and Probability 19
- 2.1.1. Characteristics of Probability Problems 19
- 2.1.2. Calculation of Probability 22

2.2. Elements of Set Theory 22
- 2.2.1. Definitions 23
- 2.2.2. Combination of Events 27
- 2.2.3. Operational Rules 31

2.3. Mathematics of Probability 36
- 2.3.1. Basic Axioms of Probability; Addition Rule 36
- 2.3.2. Conditional Probability; Multiplication Rule 43

2.3.3. Theorem of Total Probability 52
2.3.4. Bayes' Theorem 56

2.4. Concluding Remarks 60

Problems 60

3. *Analytical Models of Random Phenomena*

3.1. Random Variables 80
3.1.1. Probability Distribution of a Random Variable 81
3.1.2. Main Descriptors of a Random Variable 87

3.2. Useful Probability Distributions 97
3.2.1. The Normal Distribution 97
3.2.2. The Logarithmic Normal Distribution 102
3.2.3. Bernoulli Sequence and the Binomial Distribution 106
3.2.4. The Geometric Distribution 110
3.2.5. The Negative Binomial Distribution 113
3.2.6. The Poisson Process and Poisson Distribution 114
3.2.7. The Exponential Distribution 120
3.2.8. The Gamma Distribution 124
3.2.9. The Hypergeometric Distribution 127
3.2.10. The Beta Distribution 129
3.2.11. Other Distributions 133

3.3. Multiple Random Variables 133
3.3.1. Joint and Conditional Probability Distributions 134
3.3.2. Covariance and Correlation 140
3.3.3. Conditional Mean and Variance 143

3.4. Concluding Remarks 145

Problems 146

4. *Functions of Random Variables*

4.1. Introduction 170

4.2. Derived Probability Distributions 170
4.2.1. Function of Single Random Variable 170
4.2.2. Function of Multiple Random Variables 174

4.3. Moments of Functions of Random Variables 191
4.3.1. Introduction 191
4.3.2. Mean and Variance of a Linear Function 191

4.3.3. Product of Independent Variates . . . 196
4.3.4. Mean and Variance of a General Function . . . 196

4.4. Concluding Remarks . . . 202

Problems . . . 203

5. *Estimating Parameters from Observational Data*

5.1. The Role of Statistical Inference in Engineering . . . 219
5.1.1. Inherent Variability and Estimation Error . . . 221

5.2. Classical Approach to Estimation of Parameters . . . 221
5.2.1. Random Sampling and Point Estimation . . . 222
5.2.2. Interval Estimation of the Mean . . . 231
5.2.3. Problems of Measurement Theory . . . 243
5.2.4. Interval Estimation of the Variance . . . 248
5.2.5. Estimation of Proportion . . . 252

5.3. Concluding Remarks . . . 254

Problems . . . 255

6. *Empirical Determination of Distribution Models*

6.1. Introduction . . . 261

6.2. Probability Paper . . . 262
6.2.1. The Normal Probability Paper . . . 263
6.2.2. The Log-Normal Probability Paper . . . 265
6.2.3. Construction of General Probability Paper . . . 269

6.3. Testing Validity of Assumed Distribution . . . 274
6.3.1. Chi-Square Test for Distribution . . . 274
6.3.2. Kolmogorov-Smirnov Test for Distribution . . . 277

6.4. Concluding Remarks . . . 281

Problems . . . 281

7. *Regression and Correlation Analyses*

7.1. Basic Formulation of Linear Regression . . . 286
7.1.1. Regression with Constant Variance . . . 286
7.1.2. Regression with Nonconstant Variance . . . 294

7.2. Multiple Linear Regression 297
7.3. Nonlinear Regression 300
7.4. Applications of Regression Analysis in Engineering 307
7.5. Correlation Analysis 315
7.5.1. Estimation of Correlation Coefficient 315
7.6. Concluding Remarks 319
Problems 319

8. *The Bayesian Approach*

8.1. Introduction 329
8.2. Basic Concepts—The Discrete Case 330
8.3. The Continuous Case 336
8.3.1. General Formulation 336
8.3.2. A Special Application of Bayesian Up-dating Process 341
8.4. Bayesian Concepts in Sampling Theory 344
8.4.1. General Formulation 344
8.4.2. Sampling from Normal Population 345
8.4.3. Error in Estimation 347
8.4.4. Use of Conjugate Distributions 351
8.5. Concluding Remarks 354
Problems 355

9. *Elements of Quality Assurance and Acceptance Sampling*

9.1. Acceptance Sampling by Attributes 360
9.1.1. The Operating Characteristic (OC) Curve 361
9.1.2. The Success Run 366
9.1.3. The Average Outgoing Quality Curve 367
9.2. Acceptance Sampling by Variables 369
9.2.1. Average Quality Criterion, σ Known 369
9.2.2. Average Quality Criterion, σ Unknown 372
9.2.3. Fraction Defective Criterion 372
9.3. Multiple-Stage Sampling 375

9.4. Concluding Remarks 376
Problems 376

Appendix A. ***Probability Tables***

Table A.1. Table of Standard Normal Probability 380
Table A.2. p-Percentile Values of the t-Distribution 383
Table A.3. p-Percentile Values of the χ^2-Distribution 384
Table A.4. Critical Values of D^α in the Kolmogorov-Smirnov Test . 385

Appendix B. ***Combinatorial Formulas*** 386

Appendix C. ***Derivation of the Poisson Distribution*** 390
