HIGH LIFT AND SEPARATION CONTROL

WEDNESDAY 29 - FRIDAY 31 MARCH 1995

PROCEEDINGS

The Royal Aeronautical Society does not accept responsibility for the technical accuracy nor for the opinions expressed within this publication.

Published by the Royal Aeronautical Society, 4 Hamilton Place,
London, W1V 0BQ

CONTENTS

PAGES

- An Overview of the 777 High Lift Aerodynamic Design** 1.1 - 1.14
Mr B N Nield, 777 Aerodynamics Engineering, The Boeing Company, USA
- Use of Maximum Lift & Angle of Attack. A Review of Experience within BAe Military Aircraft** 2.1 - 2.12
Mr T McMichael and Mr K McKay, BAe Warton, UK
- Flap Systems on Supersonic Transport Aircraft** 3.1 - 3.6
Mr K P Nicholls, British Aerospace Airbus Ltd, UK
- Improvement of Maximum Lift in Flight By Optimisation of Vortex Flow** 4.1 - 4.10
Mr D Schwetzler, Daimler-Benz Aerospace Airbus, Germany
- Onera Activities on High-Lift Devices for Transport Aircraft** 5.1 - 5.18
Mr J J Thibert, Mr J Reneaux, Mr F Moens and Mr J Preist, ONERA, France
- Towards Design of High-Lift Krueger Flap Systems with Mach & Reynolds No. Effects for Conventional & Laminar Flow Wings** 6.1 - 6.16
Dr R K Nangia and Mr S A Galpin, Nangia Aero Research Associates, UK
- Design and Testing of Leading-Edge High-Lift Devices for Laminar Flow Wing Applications** 7.1 - 7.13
Mr F Moens, ONERA and Mr P Capbern, Aerospatiale-Avions, France
- Numerical Flow Simulation on High-Lift Configurations at Daimler-Benz Aerospace Airbus** 8.1 - 8.9
Dr F Arnold, Daimler-Benz Aerospace Airbus GmbH, Germany
- Applications of Unstructured Meshes Techniques to High Lift Configurations** 9.1 - 9.13
Dr J Szmelter and Mr R Cross, British Aerospace Airbus Ltd, UK
- Computational Modelling of High-Lift Aerofoils with Turbulence-Transport Models** 10.1 - 10.14
Dr F S Lien, Mr W L Chen and Prof M A Leschziner, UMIST, UK
- Recent Experiences on the Control of Flow Separation on Flight Surfaces of Defence Aircraft** 11.1 - 11.13
Dr A Ferretti, Alenia Aeronautica, Italy

Separation Control on Highly-Swept Wings With Fixed or Variable Camber Dr P R Ashill, Mr G L Riddle and Mr M J Stanley, Defence Research Agency, UK	12.1 - 12.15
The High-Speed Characteristics of Leading-Edge Slats: Mr N J Taylor, Defence Research Agency and Mr R Jordan, formerly with the Aircraft Research Association, UK	13.1 - 13.15
Vortex Flow Control Applied to Aircraft Intake Ducts Dr J Gibb, Defence Research Agency, UK	14.1 - 14.11
Inviscid Theory Applied to Vortex-Induced Mixing Dr M M Freestone, ESDU International plc, UK	15.1 - 15.14
Numerical Calculations for Air Jet Vortex Generators in Turbulent Boundary Layers Mr S D Akanni and Mr F S Henry, City University, UK	16.1 - 16.12
Forebody Vortex Control Dr L A Walchi and Dr D J Moorhouse, Wright Patterson Air Force Base, USA	17.1 - 17.18
Forebody Flow Control for Extended High Angle of Attack Manoeuvres Mr W J Crowther, Mr F Hodgkin and Dr N J Wood, University of Bath, UK	18.1 - 18.9
Military Aircraft Control at High Angle of Attack Mr J-C Courty and Mr T D Van, Dassault Aviation, France	19.1 - 19.14
Separated Flow about High-Lift Wings and Active Control Dr A V Petrov, TsAGI, Russia	20.1 - 20.7
Wind Tunnel Investigations on a Canard Combat-Aircraft Configuration with Full Span and Part Span Vortex Flaps Mr R N Pitman, Defence Research Agency, UK	21.1 - 21.13
Studies of Vortex Flaps for Different Sweepback Angle Dr K Rinoie, University of Tokyo, UK	22.1 - 22.8
Reduction of Fluctuating Pressure Loads in Shock Boundary Layer Interactions Using Vortex Generators Mr J W Barter and Prof D S Dolling, University of Texas, USA	23.1 - 23.12
Separation Control on the Rudder at High Deflection Angles Mr G T Andreyev and Dr G A Fedorenko, TsAGI, Russia	24.1 - 24.6
Improvements in the Performance of a Three Element High Lift System by the Application of Airjet Vortex Generators Mr F Innes, Prof H H Pearcey and Dr D M Sykes	25.1 - 25.11

- Reynolds- and Mach-Number Effects and 2D-3D Correlation Based on Measurements and Computed Results for the GARTEUR Take-Off Configuration** 26.1 - 26.15
 Dr B G Arlinger and Mr T Larsson, Saab Military Aircraft, Sweden, Dr F Arnold, Daimler-Benz Aerospace Airbus, Germany, Mr P B Earnshaw, Defence Research Agency, UK, Mr F Moens, ONERA, France, Dr E Saliveros, British Aerospace Airbus Ltd, UK and Mr A P P Termes, National Aerospace Laboratory, The Netherlands
- The NASA B737-100 High-Lift Flight Research Program Measurements and Computations** 27.1 - 27.20
 Mr L P Yip and Mr J H Whitehead, NASA Langley Research Center, Mr S J Miley, Old Dominion University, Mr A Bertelrud, Analytical Services & Materials Inc, Mr P E Willard, Boeing Commercial Airplane Group, Prof C P van Dam, University of California, Mr J D Hardin, Lockheed Engineering and Sciences Co., Mr R C Potter, McDonnell Douglas Aerospace and Mr D C Edge, North Carolina State University, USA
- Scale Effect on C_{Lmax} At High Reynolds Number** 28.1 - 28.14
 Mr A B Haines, Chairman, RAeS Aerodynamics Committee
- Vortex Flaps Canard Configuration for Improved Manoeuvrability** P29.1 - P29.7
 Mr D Levin, Technion I.I.T, Israel
- Control of Instability Waves Development in Separated Swirling Flows** P30.1 - P30.14
 Dr S P Bardakhanov and Mr V V Kozlov, Institute of Theoretical and Applied Mechanics, Russia
- Flow Visualization of an Upper Surface Blown Unmanned Aircraft** Paper Not Available For Publication
 Dr R K Pant, Cranfield University, UK
- Flow Over High-Lift Multiple Aerofoils** P32.1 - P32.13
 Mr Z Mahmood, Mr M K Khan and Dr H H Bruun, Bradford University, UK
- The Receptivity of A Laminar Separation Bubble to Acoustic Noise** P33.1 - P33.14
 Mr N Alcock and Dr D G Petty, Queen Mary & Westfield College, UK

An Overview of the 777 High Lift Aerodynamic Design

Mr B N Nield, 777 Aerodynamics Engineering, The Boeing Company, USA
