Top-down Programming using Turbo Pascal

A case study approach

Alan Clark
Margaret Williams

Loughborough College

A member of the Hodder Headline Group
LONDON • SYDNEY • AUCKLAND

Contents

1 Introduction

- How to use this book
- The libraries of code
- The structure of this book
- Why choose Turbo Pascal?
- How to work with the libraries
- Conclusion

2 Using Turbo Pascal

- 2.1 What is programming?
- 2.2 A Dos introduction
- 2.3 The tutorial disk
- 2.4 The Turbo Pascal environment
- 2.5 The File menu
- 2.6 The Compile menu
- 2.7 The Run menu
- 2.8 The editor
- 2.9 The other menu options
- 2.10 Printing files
- 2.11 Naming files

3 Messages

- 3.1 Introduction to message
- 3.2 A simple display program
- 3.3 Improving the solution
- 3.4 Writing to the screen
- 3.5 Personalising your programs

4 The hotel

- 4.1 Introduction to hotel bookings
- 4.2 Explanation of the files provided
- 4.3 Getting the first version to work

30

31

4.4	Testing the program – the planning stage	32
4.5	Testing the program – the practical task	34
4.6	Examining the code provided – what does it teach us?	37
4.7	How the procedures in the units work	42
4.8	Describing the relationships between units	44
4.9	Adding some colour	45
5	Personal identification numbers	47
5.1	Introduction to PINs	47
5.2	Understanding the problem	48
5.3	A possible solution	48
5.4	Inspecting the solution	49
5.5	Investigating units	50
5.6	The interface section	52
5.7	Parameters	52
5.8	The implementation section	54
5.9	Integer arithmetic	54
5.10	Making a selection	56
5.11	Multiple conditions – nested ifs	57
5.12	Logical and relational operators	58
5.13	Character codes	58
6	Statistical package	60
6.1	Introduction to statistical package	60
6.2	Real numbers	65
6.3	Functions	65
6.4	Further pervasive procedures and functions	67
6.5	Relational operators	69
6.6	The scope of variables	70
6.7	Describing the design	72
6.8	The 'case' statement	73
7	Dates	77
7.1	Introduction to date handling	77
7.2	Type declarations, subrange types and record types	83
7.3	Understanding the code provided	84
7.4	Enhancing the program	88
7.5	Exploring errors in programs	90
7.6	Understanding how the units work	95
7.7	The definite loop	95
8	The bank	96
8.1	Introduction	96
8.2	The program specification	98
8.3	The unit bankbase	103
8.4	Strings, records and arrays	104
8.5	Time management	104
8.6	The main program	105
		112
		112

8.7	Dry running a program	113
8.8	Making withdrawals	114
8.9	Completing the program	114
9	Further dates	116
9.1	Organising the units	116
9.2	Manipulating an array of dates	118
9.3	Enumerated types	121
9.4	Input arrangement for enumerated types	127
9.5	A related problem – displaying a calendar	134
10	The hotel revisited	139
10.1	Understanding the previous hotel case study	139
10.2	Converting the previous hotel case study to a version which uses file handling	143
10.3	Overcoming another problem of the previous hotel case study	146
10.4	Handling more realistic data	146
10.5	Text files	150
11	Solve your own problems	154
11.1	The overall scenario	154
11.2	The case studies	155
11.3	The solution	157
12	Further libraries – graphics and sound	159
12.1	Announcing your program	159
12.2	Text windows	163
12.3	Printer output	163
12.4	Dos utilities	164
12.5	Graphics	164
13	Further commands	168
13.1	REPEAT . . . UNTIL loops	168
13.2	Local procedures and functions in programs	170
13.3	Sets	175
13.4	Other pervasive types	182
13.5	Some other Pascal ideas which we do not recommend	183
14	Conclusion	191
Appendix 1	Pascal text mode colours	192
Appendix 2	Pascal conventions	193
Appendix 3	ASCII code table	196
Appendix 4	Pascal reserved words	197
