WORLD OF ART

The Thames and Hudson Encyclopaedia
of 20th-Century Architecture

General Editor: Vittorio Magnago Lampugnani

490 illustrations

With its wide-ranging and authoritative coverage of the whole spectrum of architecture and urban planning this century and of leading architects and engineers the world over, this encyclopaedia is an essential source book for anyone interested in today's built environment. The entries – by such distinguished authorities as Reyner Banham, Kenneth Frampton, Robin Middleton and Joseph Rykwert – include biographies of the most significant architects; surveys of the progress of developments in individual countries; and overviews of the impact and importance of all the influential movements and schools – from the Bauhaus to New Brutalism and beyond, up to and including Post-Modernism. Fully cross-referenced and indexed, with key bibliographical references for further reading, the text is generously illustrated throughout. 'Admirably factual and well written' (The Times Educational Supplement) 'Excellent value for its size and scope' (New Society)
