

FEEDBACK CONTROL THEORY

JOHN C. DOYLE
BRUCE A. FRANCIS
ALLEN R. TANNENBAUM

621-318-1

Contents

1 Introduction 1

- 1.1 Issues in Control System Design 1
- 1.2 What Is in This Book 7
- Notes and References 12

2 Norms for Signals and Systems 13

- 2.1 Norms for Signals 13
- 2.2 Norms for Systems 15
- 2.3 Input-Output Relationships 18
- 2.4 Power Analysis (Optional) 19
- 2.5 Proofs for Tables 2.1 and 2.2 (Optional) 21
- 2.6 Computing by State-Space Methods (Optional) 25
- Exercises 28
- Notes and References 31

3 Basic Concepts 32

- 3.1 Basic Feedback Loop 32
- 3.2 Internal Stability 35
- 3.3 Asymptotic Tracking 39
- 3.4 Performance 41
- Exercises 44
- Notes and References 45

4 Uncertainty and Robustness 46

- 4.1 Plant Uncertainty 46
- 4.2 Robust Stability 51
- 4.3 Robust Performance 56
- 4.4 Robust Performance More Generally 60

4.5	Conclusion	61
	Exercises	62
	Notes and References	65

5 Stabilization 66

5.1	Controller Parametrization: Stable Plant	66
5.2	Coprime Factorization	68
5.3	Coprime Factorization by State-Space Methods (Optional)	73
5.4	Controller Parametrization: General Plant	74
5.5	Asymptotic Properties	77
5.6	Strong and Simultaneous Stabilization	79
5.7	Cart-Pendulum Example	85
	Exercises	88
	Notes and References	89

6 Design Constraints 90

6.1	Algebraic Constraints	90
6.2	Analytic Constraints	91
	Exercises	103
	Notes and References	104

7 Loopshaping 105

7.1	The Basic Technique of Loopshaping	105
7.2	The Phase Formula (Optional)	109
7.3	Examples	113
	Exercises	119
	Notes and References	120

8 Advanced Loopshaping 121

8.1	Optimal Controllers	121
8.2	Loopshaping with C	122
8.3	Plants with RHP Poles and Zeros	130
8.4	Shaping S , T , or Q	141
8.5	Further Notions of Optimality	144
	Exercises	154
	Notes and References	155

9 Model Matching 156

9.1	The Model-Matching Problem	156
9.2	The Nevanlinna-Pick Problem	157

9.3	Nevanlinna's Algorithm	161
9.4	Solution of the Model-Matching Problem	166
9.5	State-Space Solution (Optional)	168
	Exercises	170
	Notes and References	171

10 Design for Performance **172**

10.1	P^{-1} Stable	172
10.2	P^{-1} Unstable	177
10.3	Design Example: Flexible Beam	179
10.4	2-Norm Minimization	185
	Exercises	187
	Notes and References	189

11 Stability Margin Optimization **190**

11.1	Optimal Robust Stability	190
11.2	Conformal Mapping	194
11.3	Gain Margin Optimization	196
11.4	Phase Margin Optimization	202
	Exercises	203
	Notes and References	204

12 Design for Robust Performance **205**

12.1	The Modified Problem	205
12.2	Spectral Factorization	206
12.3	Solution of the Modified Problem	208
12.4	Design Example: Flexible Beam Continued	215
	Exercises	218
	Notes and References	219

References **220**

Index **225**
