

**AIR
MONITORING
BY
SPECTROSCOPIC
TECHNIQUES**

Edited by

MARKUS W. SIGRIST

Volume 127 in Chemical Analysis:
A Series of Monographs on Analytical Chemistry and its Applications
J.D. Winefordner, Series Editor; I.M. Kolthoff, Editor Emeritus

CONTENTS

CONTRIBUTORS	xvii
PREFACE	xix
CUMULATIVE LISTING OF VOLUMES IN SERIES	xxi
CHAPTER 1 INTRODUCTION TO ENVIRONMENTAL SENSING	1
<i>Markus W. Sigrist</i>	
1.1. The Role of Atmospheric Trace Gases in the Environment	1
1.1.1. Global Warming	2
1.1.2. Stratospheric Ozone Depletion	6
1.1.3. Photochemical Smog	7
1.2. Detection Schemes for Atmospheric Trace Gases	8
1.2.1. Requirements	8
1.2.2. Sampling Methods	10
1.2.3. Nonspectroscopic Techniques	10
1.2.4. Spectroscopic Techniques for Air Monitoring	13
1.2.4.1. Scattering Processes	13
1.2.4.2. Absorption Processes	19
1.3. Conclusions and Outlook	22
References	23
CHAPTER 2 DIFFERENTIAL OPTICAL ABSORPTION SPECTROSCOPY (DOAS)	27
<i>U. Platt</i>	
2.1. Introduction	27
2.1.1. Requirements for Spectroscopic Air Monitoring Techniques	27
2.1.2. The Principle of Absorption Spectroscopy	28

2.1.3. Selection Criteria for Spectroscopic Techniques	29
2.2. Long-Path UV–Visible Absorption Spectroscopy	30
2.2.1. Light Absorption in the Atmosphere	30
2.2.2. Differential Optical Absorption Spectroscopy (DOAS)	31
2.3. Usable Spectral Ranges: Species Measurable with DOAS	34
2.4. The Optical Design of Long-Path Spectrometers	37
2.4.1. Key Components of DOAS Systems	37
2.4.2. Practical Design of a Low-Resolution DOAS Spectrometer	39
2.4.3. Light Utilization in a Long-Path Spectrometer	42
2.4.4. Arrangement of Light Paths	45
2.4.5. High-Resolution DOAS for the Detection of Atmospheric OH Radicals	47
2.4.6. Optical Setup for the Detection of Stratospheric Trace Gases	47
2.5. Detectors for UV–Visible Spectrometers	49
2.5.1. Optomechanical Scanning Devices	49
2.5.2. Photodiode Array Detectors	51
2.6. Evaluation of Spectra, Sensitivity, and Detection Limits	52
2.6.1. Evaluation Procedures	52
2.6.2. Sensitivity and Detection Limits	55
2.6.3. Interferences	56
2.6.4. Optimum Light Path	58
2.6.5. Optimum Resolution	59
2.7. Sample Applications	61
2.7.1. Observation of Air Pollution	62
2.7.2. Observation of the $\text{NO}_x\text{--O}_3$ Photostationary State	63
2.7.3. Investigating Free Radical Reactions in the Atmosphere	63
2.7.4. Measurement of NO_3 Radicals by DOAS	66

2.7.5. Measurement of OH Radicals by DOAS	71
2.7.6. Determination of Total Column Densities by Means of Extraterrestrial Light Sources	73
2.8. Conclusions	76
References	76
CHAPTER 3 DIFFERENTIAL ABSORPTION LIDAR (DIAL)	85
<i>Sune Svanberg</i>	
3.1. Introduction	85
3.2. Basic Considerations	89
3.2.1. Long-Path Absorption Monitoring	90
3.2.2. The Lidar Method	93
3.2.2.1. Topographic Target Lidar	94
3.2.2.2. Mie Scattering Lidar	97
3.2.2.3. Raman Lidar	99
3.2.2.4. Fluorescence Lidar	102
3.2.2.5. Solid Target Fluorescence Lidar	103
3.3. Principles of Differential Absorption Lidar (DIAL)	107
3.4. Lasers for DIAL	111
3.4.1. The Nd:YAG Laser	114
3.4.2. The Excimer Laser	114
3.4.3. The Dye Laser	115
3.4.4. The Titanium-Sapphire Laser	116
3.4.5. The CO ₂ Laser	116
3.4.6. The Diode Laser	116
3.5. Lidar System Design	117
3.5.1. Dynamic Range Reduction	117
3.5.2. Heterodyne Detection	118
3.5.3. Atmospheric Turbulence	119
3.5.4. Fixed DIAL System Design	120
3.5.5. Mobile DIAL System Design	123
3.5.6. Airborne DIAL System Design	131
3.5.7. Eye Safety	131
3.6. DIAL Monitoring of Tropospheric Gases	133
3.6.1. SO ₂ Monitoring	133

3.6.2.	O ₃ Monitoring	136
3.6.3.	NO ₂ Monitoring	136
3.6.4.	NO Monitoring	136
3.6.5.	Monitoring of Other Gases	139
3.6.6.	Sensitivity and Detection Limits of DIAL	139
3.7.	Special Case Study: Atomic Mercury Monitoring	140
3.8.	Outlook	151
	References	151
CHAPTER 4	AIR MONITORING BY LASER PHOTOACOUSTIC SPECTROSCOPY	163
	<i>Markus W. Sigrist</i>	
4.1.	Historical Perspectives	163
4.2.	Fundamentals of Gas Phase Photoacoustics	165
4.2.1.	Photoacoustic Signal Generation	165
4.2.1.1.	Modulated Excitation	166
4.2.1.2.	Pulsed Excitation	174
4.2.2.	Photoacoustic Signal Analysis	176
4.2.2.1.	One-Component Samples	176
4.2.2.2.	Multicomponent Samples	178
4.2.2.3.	Determination of Sensitivity and Selectivity	179
4.3.	Experimental Arrangements for Laser PA Trace Gas Detection	180
4.3.1.	Tunable Radiation Sources	181
4.3.2.	Modulation Schemes	183
4.3.3.	Design of PA Gas Cells	184
4.3.4.	Detection Schemes	190
4.4.	Laboratory Studies on Air Samples	193
4.4.1.	Certified Gases	195
4.4.2.	Multicomponent Gas Mixtures	198
4.5.	Air Monitoring in the Field	206
4.5.1.	A Mobile Laser PA System	206
4.5.2.	Stack Gas Emissions	208
4.5.3.	Ambient Air Monitoring	212

4.5.4. Stratospheric Studies	223
4.6. Conclusions and Outlook	224
References	227
CHAPTER 5 THE USE OF TUNABLE DIODE LASER ABSORPTION SPECTROSCOPY FOR ATMOSPHERIC MEASUREMENTS	239
<i>H. I. Schiff, G. I. Mackay, and J. Bechara</i>	
5.1. Introduction	239
5.2. Absorption Relations	241
5.2.1. The Beer–Lambert Law	241
5.2.2. Doppler Broadening	242
5.2.3. Pressure Broadening	243
5.2.4. The Voigt Regime	244
5.3. Tunable Diode Lasers	244
5.4. Components of TDL Spectrometers	251
5.4.1. Laser Temperature Control	251
5.4.2. Current Control and Modulation Techniques	256
5.4.2.1. Amplitude Modulation	256
5.4.2.2. Wavelength Modulation	256
5.4.2.3. High-Frequency Modulation	259
5.4.2.4. Sweep Integration	261
5.4.2.5. Pulsed Lasers	262
5.4.2.6. Heterodyne Detection	263
5.4.3. Collimating Optics	264
5.4.4. Long-Path Techniques	264
5.4.5. Detectors	266
5.5. Requirements for an Atmospheric TDLAS System	268
5.5.1. Calibration Systems	269
5.5.2. Line Locking	270
5.5.3. Multiplexing	271
5.5.4. Operating Control and Data Acquisition Systems	273
5.6. Sources of Noise and Detection Limits	273
5.6.1. Noise Sources	274

5.6.1.1. Detector Noise	274
5.6.1.2. Laser Excess Noise	275
5.6.1.3. Residual Amplitude Modulation	277
5.6.1.4. Interference Fringes	277
5.6.2. Detection Limits	279
5.6.3. Precision and Accuracy	282
5.7. A Typical TDLAS System for Atmospheric Measurements	283
5.8. Measurements with TDLAS Systems	287
5.8.1. Ground-Based Measurements of Ambient Air Concentrations	288
5.8.2. Ground-Based Flux Measurements	304
5.8.3. Concentration and Flux Measurements from Aircraft	305
5.8.4. Measurements from Ships	307
5.8.5. Measurements from Balloons and Rockets	308
5.8.6. Isotope Ratio Measurements	308
5.8.7. Automobile Exhaust	310
5.8.8. Pollution and Other Applications	313
5.9. Summary: Present Status and Future Developments	316
References	318
CHAPTER 6 GAS MEASUREMENT IN THE FUNDAMENTAL INFRARED REGION	335
<i>Philip L. Hanst and Steven T. Hanst</i>	
6.1. Introduction	335
6.1.1. Gases and Vapors	335
6.1.2. Infrared Signatures	335
6.1.3. The Fundamental Infrared Region	336
6.1.4. Instrumentation Improvements and Detection Limit Extensions	336
6.1.5. Detection Limits	338
6.2. Manipulating the Spectra	345
6.2.1. Line Widths and Resolution Requirements	345

6.2.2. Some Benefits from Pressure Reduction	347
6.2.3. Contending with the Overlapping of Absorption Bands	350
6.2.4. Measuring Gases with Less Than Full Resolution	352
6.2.5. Reference Spectra and Subtraction Rules	357
6.2.6. An Example of the Effects of Mismatches in Resolution and Frequency	360
6.2.7. Preparing the Reference Spectra	361
6.2.8. Automatic Subtraction or Interactive Subtraction?	363
6.3. Sample Handling and Collection Techniques	363
6.3.1. Flow Sampling	363
6.3.2. "Grab" Sampling	363
6.3.3. Cryogenic Sample Concentration	364
6.3.4. Using a "Marker" Compound to Calibrate the Sample Collection	368
6.3.5. Multiple-Reflection Cells	368
6.3.6. The Advantage of a Multiple-Pass Cell Over a Single or Double Long Path	371
6.4. Field Applications	375
6.4.1. Optical Paths Through the Atmosphere	375
6.4.2. Some Examples of Atmospheric Measurements	377
6.4.3. Measurement of Polluted Urban Air, with Grab Sampling	392
6.4.4. An Example of Atmospheric Analysis by Open-Path Infrared Spectroscopy	399
6.4.4.1. Introductory Remarks	399
6.4.4.2. Measurement Technique	400
6.4.4.3. The Atmospheric Transmission	403
6.4.4.4. Examples of Trace Gas Measurement	408
6.5. General Analytical Applications	422
6.5.1. Laboratory Studies	422
6.5.2. Measuring Impurities in Infrared Active Gases	425

6.5.3. Measurement of Benzene and Other Aromatic Hydrocarbons	426
6.5.4. Water Analysis in the Gas Phase by FTIR	429
6.5.5. An Analysis of Indoor Air	433
6.5.6. Infrared Analysis of Engine Exhausts	439
6.5.6.1. Introductory Remarks	440
6.5.6.2. Measurement Method	441
6.5.6.3. Results of the Analyses	442
6.5.6.4. Conclusion	454
6.6. Nondispersive Analysis	455
6.6.1. Introductory Remarks	455
6.6.2. System Operational Principles	456
6.6.3. Removal of Interferences	458
6.6.4. Detection Sensitivity	458
6.7. Available Long-Path Cells and Gas Measurement Systems	459
6.8. An Atlas of Quantitative Reference Spectra	461
References	466
CHAPTER 7 MATRIX ISOLATION SPECTROSCOPY IN ATMOSPHERIC CHEMISTRY	471
<i>David W. T. Griffith</i>	
7.1. Introduction	471
7.2. Matrix Isolation Spectroscopy	473
7.3. MI-FTIR Spectroscopy in Atmospheric Trace Gas Analysis	476
7.3.1. Sample Collection	479
7.3.1.1. Direct Sample Collection and Measurement	479
7.3.1.2. Two-Step Sample Collection	481
7.3.2. Matrix Growth and FTIR Spectrum Measurement	482
7.3.2.1. Reflection-Absorption Spectroscopy	482
7.3.2.2. An Integrating Sphere	484
7.3.3. Calibration and Quantitative Analysis	486
7.3.4. Applications	488

7.3.4.1. Preliminary Studies	488
7.3.4.2. Upper Atmospheric Studies	490
7.3.4.3. Biomass Burning Studies	491
7.4. MI-ESR Measurements of Atmospheric Free Radicals	494
7.4.1. Sampling and Matrix Growth	495
7.4.2. ESR Spectra and Calibration	497
7.4.3. Applications	503
7.4.3.1. Stratospheric Measurements	503
7.4.3.2. Tropospheric Measurements	504
7.5. Other Applications	506
7.5.1. Gas Chromatography-MI-FTIR	506
7.5.2. Shpol'skii Spectroscopy	507
7.5.3. Kinetic Studies	507
7.6. Conclusions	508
References	510
